Increasing discontinuity, complexity and dynamic in the business environment amongst other things caused by globalisation of markets and accelerated changes in technology have lead to a growing importance of enterprise risk management. In the light of this developments and because of spectacular business breakdowns which have ocured in the last years legislative and other executive bodies were forced to issue corresponding regulations in respect of enterprise risk management. Of course independent from the legal activities it's obvious for good management to install and proceed a corresponding enterprise risk management. The present dissertation is analysing in a first step if COSO ERMF can be used as a guideline for implementing a state-of-the-art enterprise risk management. In a second step relevant legal regulations, standards, codicies and other sources of influence on enterprise risk management are analysed and reflected at the COSO ERMF in order to see if COSO ERMF covers all material demands. Finally a practical example of implementation of an enterprise risk management is presented.

This book expands the scope of risk management beyond insurance and finance to include accounting risk, terrorism, and other issues that can threaten an organization. It approaches risk management from five perspectives: in addition to the core perspective of financial risk management, it addresses perspectives of accounting, supply chains, information systems, and disaster management. It also covers balanced scorecards, multiple criteria analysis, simulation, data envelopment analysis, and financial risk measures that help assess risk, thereby enabling a well-informed managerial decision making. The book concludes by looking at four case studies, which cover a wide range of topics. These include such practical issues as the development and implementation of a sound risk management structure; supply chain risk and enterprise resource planning systems in information systems, and disaster management.
