Much of the discussion about new technologies and social equality has focused on the oversimplified notion of a "digital divide." *Technology and Social Inclusion* moves beyond the limited view of haves and have-nots to analyze the different forms of access to information and communication technologies. Drawing

on theory from political science, economics, sociology, psychology, communications, education, and linguistics, the book examines the ways in which differing access to technology contributes to social and economic stratification or inclusion. The book takes a global perspective, presenting case studies from developed and developing countries, including Brazil, China, Egypt, India, and the United States. A central premise is that, in today's society, the ability to access, adapt, and create knowledge using information and communication technologies is critical to

social inclusion. This focus on social inclusion shifts the discussion of the "digital divide" from gaps to be overcome by providing equipment to social development challenges to be addressed through the effective integration of technology into communities, institutions, and societies. What is most important is not so much the physical availability of computers and the Internet but rather people's ability to make use of those technologies to engage in meaningful social practices.

Searching for a New Kenya analyses public discussion in urban Kenya, focusing on the gatherings of citizens, both in-person and online, where people discuss issues of common concern to shed light on the role public discussion plays in politics and how social media affects political movements. Through rich ethnographic study of politics on the ground and online in Mombasa, Stephanie Diepeveen brings a fresh perspective on the wider challenges and dynamics of negotiating political narratives across protracted historical debates and changing digital media. Based on a critical revision of Hannah Arendt's ideas about action and power, this study explores the different dynamics

of public talk in practice. It contributes to wider debates about the place and limitations of the Western canon in relation to the study of politics elsewhere, while also offering a nuanced view of why and how certain terms of debate persist in Kenya, and where the potential for change lies for public talk across changing media.

Historically, security managers have tended to be sourced from either the armed forces or law enforcement. But the increasing complexity of the organisations employing them, along with the technologies employed by them, is forcing an evolution and expansion of the role, and security managers must meet this challenge in order to succeed in their field and protect the assets of their employers. Risk management, crisis management, continuity management, strategic business operations, data security, IT, and business communications all fall under the purview of the security manager. This book is a guide to meeting those challenges, providing the security manager with the essential skill set and knowledge base to meet the challenges

faced in contemporary, international, or tech-oriented businesses. It covers the basics of strategy, risk, and technology from the perspective of the security manager, focussing only on the 'need to know'. The reader will benefit from an understanding of how risk management aligns its functional aims with the strategic goals and operations of the organisation. This essential book supports professional vocational accreditation and qualifications, such as the Chartered Security Professional (CSyP) or Certified Protection Professional (CPP), and advises on pathways to higher education qualifications in the fields of security and risk management. It is ideal for any risk manager looking to further their training and development, as well as being complementary for risk and security management programs with a focus on practice.

 Networks of Outrage and Hope is an exploration of the new forms of social movements and protests that are erupting in the world today, from the Arab uprisings to the indignadas movement in Spain, from the Occupy Wall Street movement to the social protests in Turkey, Brazil and elsewhere. While these and similar social movements differ in many important ways, there is one thing they share in

common: they are all interwoven inextricably with the creation of autonomous communication networks supported by the Internet and wireless communication. In this new edition of his timely and important book, Manuel Castells examines the social, cultural and political roots of these new social movements, studies their innovative forms of self-organization, assesses the precise role of technology in the dynamics of the movements, suggests the reasons for the support they have found in large segments of society, and probes their capacity to induce political change by influencing people's minds. Two new chapters bring the analysis up-to-date and draw out the implications of these social movements and protests for understanding the new forms of social change and political democracy in the global network society.

This volume provides a comparative analysis of media systems in the Arab world, based on criteria informed by the historical, political, social, and economic factors influencing a country's media.

Reaching beyond classical western media system typologies, Arab Media Systems brings together contributions from experts in the field of media in the Middle East and North Africa (MENA) to provide valuable insights into the heterogeneity of this region's media systems. It focuses on trends in government stances towards media, media ownership models, technological innovation, and the role of transnational mobility in shaping media structure and practices. Each chapter in the volume traces a specific country's media – from Lebanon to Morocco – and assesses its media system in terms of historical roots, political and legal frameworks, media economy and ownership patterns, technology and infrastructure, and social factors (including diversity and equality in gender, age, ethnicities, religions, and languages). This book is a welcome contribution to the field of media studies, constituting the only edited collection in recent years to provide a comprehensive and systematic overview of Arab media systems. As such, it will be of great use to students and scholars in media, journalism and communication studies, as well as political scientists,

sociologists, and anthropologists with an interest in the MENA region.

This book focuses on the vulnerabilities of state and local services to cyber-threats and suggests possible protective action that might be taken against such threats. Cyber-threats to U.S. critical infrastructure are of growing concern to policymakers, managers and consumers. Information and communications technology (ICT) is ubiquitous and many ICT devices and other components are interdependent; therefore, disruption of one component may have a negative, cascading effect on others. Cyber-attacks might include denial of service, theft or manipulation of data. Damage to critical infrastructure through a cyber-based attack could have a significant impact on the national security, the economy, and the livelihood and safety of many individual citizens. Traditionally cyber security has generally been viewed as being focused on higher level threats such as those against the internet or the Federal government. Little attention has been paid to cyber-security at the state and local level. However,

these governmental units play a critical role in providing services to local residents and consequently are highly vulnerable to cyber-threats. The failure of these services, such as waste water collection and water supply, transportation, public safety, utility services, and communication services, would pose a great threat to the public. Featuring contributions from leading experts in the field, this volume is intended for state and local government officials and managers, state and Federal officials, academics, and public policy specialists.

Cyberterrorism and the misuse of Internet for terrorist purposes represents a serious threat, since many essential aspects of today's society are completely dependent upon the functioning of computer systems and the Internet. Further to the adoption by the Council of Europe of the Cybercrime Convention (2001) and the Convention on the Prevention of Terrorism (2005), its Committee of Experts on Terrorism (CODEXTER) has been studying this matter and surveying the situation in member states to evaluate whether

existing legal instruments are sufficient to combat this emerging form of crime. This publication contains an expert report prepared by the Max Planck Institute, which evaluates the main problems that arise in the context of cyberterrorism and provides recommendations, together with reports on the situation in the member and observer states of the Council of Europe and the relevant Council of Europe conventions

Over the course of several decades, copyright protection has been expanded and extended through legislative changes occasioned by national and international developments. The content and technology industries affected by copyright and its exceptions, and in some cases balancing the two, have become increasingly important as sources of economic growth, relatively high-paying jobs, and exports. Since the expansion of digital technology in the mid-1990s, they have undergone a technological revolution that has disrupted long-established modes of creating, distributing, and using works ranging from literature and news to film and music to scientific publications and computer software. In the United States and internationally, these disruptive changes have given rise to a strident debate over copyright's proper scope and terms and means of its enforcement-a

debate between those who believe the digital revolution is progressively undermining the copyright protection essential to encourage the funding, creation, and distribution of new works and those who believe that enhancements to copyright are inhibiting technological innovation and free expression. Copyright in the Digital Era: Building Evidence for Policy examines a range of questions regarding copyright policy by using a variety of methods, such as case studies, international and sectoral comparisons, and experiments and surveys. This report is especially critical in light of digital age developments that may, for example, change the incentive calculus for various actors in the copyright system, impact the costs of voluntary copyright transactions, pose new enforcement challenges, and change the optimal balance between copyright protection and exceptions.

Ports are the vital hubs of the maritime transport industry, and crucial to the flow of global trade. The protection of this global supply chain from crime and terrorism is a fundamental objective of port security, and is a landscape beset by

new challenges and changes post 9/11. Building on multi-sited ethnographic fieldwork in two major European ports, Yarin Eski discusses how operational policing and security realities and identities are established, and examines how industrial commercialization has aggravated security issues. Policing, Port Security and Crime Control offers a compelling empirically balanced account of the attitudes and practices of port police officers and security officers, exploring the everyday realities and ambitions of these street-level professionals as they seek to (re)establish a meaningful occupational identity. In doing so, this book presents a criminological understanding of the way that security questions and procedures are integrated into the daily lives of those that protect the industrial port sites, where they themselves must interrupt the global supply chain in order to defend it. Exploring topics such as port security management, multi-agency policing, port theft, drug trafficking, human smuggling and terrorism, this book offers a major contribution to the growing literature on transnational crime and security and is

one of the first to offer an ethnographic approach to port security. This book is interdisciplinary and will appeal to criminologists, sociologists, ethnographers and those engaged with policing and security studies, as well as professionals in the field of multi-agency policing, border control, security and governance of the port and wider maritime industry.

Now the standardisation work of DAB (Digital Audio Broadcasting) system is finished many broadcast organisations, network providers and receiver manufacturers in European countries and outside of Europe (for example Canada and the Far East) will be installing DAB broadcast services as pilot projects or public services. In addition some value added services (data and video services) are under development or have already started as pilot projects. The new digital broadcast system DAB distinguishes itself from existing conventional broadcast systems, and the various new international standards and related documents (from ITU-R, ISO/IEC, ETSI, EBU, EUREKA147, and

others) are not readily available and are difficult to read for users. Therefore it is essential that a well structured technical handbook should be available. The Second Edition of Digital Audio Broadcasting has been fully updated with new sections and chapters added to reflect all the latest developments and advances. Digital Audio Broadcasting: Provides a fully updated comprehensive overview of DAB Covers international standards, applications and other technical issues Combines the expertise of leading researchers in the field of DAB Now covers such new areas as: IP-Tunneling via DAB; Electronic Programme Guide for DAB; and Metadata A comprehensive overview of DAB specifically written for planning and system engineers, developers for professional and domestic equipment manufacturers, service providers, as well as postgraduate students and lecturers in communication technology.

'Blown to Bits' is about how the digital explosion is changing everything. The text explains the technology, why it creates so many surprises and why things often don't

work the way we expect them to. It is also about things the information explosion is destroying: old assumptions about who is really in control of our lives.
