"It is our privilege to welcome you to the third Canadian edition of An Introduction to Psychological Science. We would not have had this opportunity without the support and feedback of the instructors who have adopted this book for their classes, and from their students (and our own) who have learned from this book. Why is it time for a third edition? As you should already know, psychological science progresses quickly, and we want to ensure we represent significant advances or theoretical challenges that are happening right now. In addition, there are examples and applications of

psychological principles in the media all of the time, and we want to include these in the learning experience, whether in the text or in online activities. While keeping the book up-to-date with the latest research and current events, we also want to improve on our presentation of classic studies, research methods, and so on that remain in the foundation of our discipline. This is where the feedback from our readers has been so important. Thanks to everyone who has shared what they have enjoyed about this book as well as what we might be able to do better--we believe we have, in fact, done better!"--

W. W. Norton  
Comer and Gould's *Psychology Around Us* demonstrates the many-often surprising, always fascinating-intersections of psychology with students' day-to-day lives. Every chapter includes sections on human development, brain function, individual differences and abnormal psychology that occur in that area. These "cut-across" sections highlight how the different fields of psychology are connected to each other and how they connect to everyday life. Every chapter begins with a vignette that shows the power of psychology in understanding a whole

range of human behavior. This theme is reinforced throughout the chapter in boxed readings and margin notes that celebrate the extraordinary processes that make the everyday possible and make psychology both meaningful and relevant. The text presents psychology as a unified field the understanding of which flows from connecting its multiple subfields and reinforces the fact that psychology is a science with all that this implies (research methodology, cutting edge studies, the application of critical thinking).
