70 Years of Fao (1945-2015) John Wiley & Sons

In this classic work, the foremost historian of science in our time, George Sarton, sums up his reflections on the role of science and of the humanities in our culture. Voicing his opposition to the old-fashioned humanists on the one hand, and to the 'uneducated' men of science and technicians on the other, Sarton points out to the former that the humanities without scientific are essentially incomplete. He warns the latter that without history, without philosophy, without arts and letters, without a living religion, human life on this planet would cease to be worthwhile. After outlining his 'Faith of a Humanist' in the opening section, Sarton goes on to analyze 'The History of Science and the History of Civilization,' to discuss the progress of scientific thought since ancient times in 'East and West,' and to propose the solution for the educational and cultural crisis of our time in 'The New Humanism' and in 'The History of Science and the Problems of Today.' He concludes not only that science is a source of technological development that has changed the face of the earth and has convulsed our lives for good and evil, but that it nonetheless affords the best means of understanding the world, its people, and the multitude of their relationships. 'Science is the

conscience of mankind.' Included in this edition is Robert M. Merton's address before the Sarton Centennial meeting of November 1984. It is a stunning tour de force in its own right, providing insights into Sarton, teaching and research at Harvard in the 1930s, and the personal interaction between Sarton the mentor, and Merton the pupil. The essay supplements May Sarton's earlier 'Informal Portrait of George Sarton' *Compact Preliminary for Schools Student's Book Without Answers with CD-ROM* IUCN

The black and the white rhinoceros have become flagship species for international conservation. They are significant not only for the continuation of a major evolutionary heritage, but also as symbols for the protection of African savannahs. The battle for the survival of these species has been marked by some notable successes and sadly, many failures, and the situation is still critical. The international horn trade ban and the domestic bans imposed in most traditional user states have driven the trade further underground, in some cases inflating prices and making illegal dealing even more lucrative. This Plan is aimed at donors, government and non-government organizations, and all those involved in rhino conservation. It outlines the actions and strategies needed to catalyse support for these majestic animals, and help secure their future in sub-Saharan Africa. The overall conclusion is that, given the political will, stability and adequate field expenditure, rhinos can be conserved in the wild.

The Priapeia is a collection of ninety-five poems in various meters on subjects pertaining to the phallic god Priapus. It was compiled from literary works and inscriptions on images of the god by an unknown editor, who composed the introductory epigram. From their style and versification it is evident that the poems belong to the classical period of Latin literature. Some, however, may be interpolations of a later period. These poems were posted upon statues of Priapus that stood in the midst of gardens as the protector of the fruits that grew therein. These statues were often crude carvings made from tree trunks. They roughly resembled the form of a man with a huge phallus. The statues also promoted the gardens' fertility. The verses are attributed variously to Virgil, Ovid, and Domitius Marsus. However, most authorities on the matter regard them to have been the work of a group of poets who met at the house of Maecenas, amusing themselves by writing tongue-in-cheek tributes to the garden Priapus. (Maecenas was Horace's patron.) Others, including Martial and Petronius, were thought to have added more verses in imitation of the originals.

"This marriage is not supposed to happen." Lombardy, 1628, a time of oppressive Spanish occupation of Northern Italy, and of the Thirty Years' War. The young lovers Lorenzo and Lucia, both from peasant families, are planning their wedding. However, the villainous Don Rodrigo has designs on Lucia, and the lovers are forced to flee their village. Their dangerous journey in exile takes them through one of the most dramatic epochs in Italian history, filled with war, famine and plague - will they ever be able to find happiness together? Dave Eggers says, of the series: "I couldn't be prouder to be a part of it. Ever since Alessandro conceived this idea I thought it was brilliant. The editions that they've compiled

have been lushly illustrated and elegantly designed."

This book enables readers to see the connections in organic chemistry and understand the logic. Reaction mechanisms are grouped together to reflect logical relationships. Discusses organic chemistry as it is applied to real-world compounds and problems. Electrostatic potential plots are added throughout the text to enhance the recognition and importance of molecular polarity. Presents problems in a new "Looking-Ahead" section at the end of each chapter that show how concepts constantly build upon each other. Converts many of the structural formulas to a line-angle format in order to make structural formulas both easier to recognize and easier to draw.

'Guide to Medical Informatics, the Internet and Telemedicine' presents an easy-to-read overview of the subject, and explains basic concepts in a non-technical manner. Since these technologies continue to develop at a rapid rate, the book is designed to familiarize clinicians with the more fundamental aspects and to enable them to make informed decisions about the application of this technology. This guide is written for the general medical reader and assumes little or no familiarity with medical informatics. It will also be useful for medical students as well as allied healthcare workers and research scientists who need to understand or apply these technologies in their practice.
