Based on the findings of large-scale field surveys, Good Governance provides a primary review of trends in corruption, as encountered by citizens when availing of public services, and offers insightful suggestions on ways to implement good governance. Given the adverse effects of corruption on society, economy, citizenship and civic life, the author illuminates upon a comprehensive understanding of the linkages involved in corruption processes and operations, and provides a strategic approach to curb this menace together with a methodology for ensuring graft-free delivery of public services. Not delineating corruption from the fabric of daily life, the discussion centres around a broad framework on how to go about addressing corruption from different perspectives-how the government should tackle it, what initiatives citizens and civil society should take and how the news media could explore a proactive and contributing role. In fact, the book says that the media is capable of covering corruption with a direct objective of curbing it. Thus, the fight against corruption has to be strategic, focused and multipronged. Good Governance talks about the pertinent problem of creating sustained public pressure for change, the emphasis being on the proactive need for change.

This book clarifies the direction of business innovation using new ICT such as the Internet of things (IoT), artificial intelligence (AI), smartphones, and cloud computing through a series of case studies on successful trials and advanced businesses in the Asia-Pacific where many industry sectors have been growing successfully in the 21st century. ICT has been playing an important role in value creation for customers and in profit generation for providers, contributing to various service innovation and business innovation. Now, digitalization using IoT and AI provides solutions to address various issues in the human society, which is transforming services and businesses in the 21st century. "What is the direction of the business innovation using new ICT?" is a highly concerned question for business researchers and practitioners. Aiming to answer the question, this book conducts a number of cases studies in the Asia-Pacific region, including the Mainland China, Taiwan, Japan, Malaysia, Vietnam, as well as Australia. Among the studies, there are 4 cases from ICT providers, 4 cases from traditional and services, and 6 cases from new ICT applications and businesses. Each case analyzes social needs and human desires, new value created, roles of new technologies, processes and difficulties in developing new businesses, the relationship among customers, providers, and stakeholders, value chain co-creation and optimization, factors of success, and business models. Finally, the direction of business innovation with new ICT in the Asia-Pacific is suggested by summarizing the findings from the case studies through the lens of the theoretical analysis in service science.

Rapid advancement of interactive technologies during the past two decades has made access to information easier though at the expense of a clear digital divide. There is a generation who grew up with these technologies and another generation who find many modern electronic systems counter intuitive and have no use for them in their daily life. This digital divide becomes more prominent in developing countries as state-of-the-art interactive systems were not and are still not affordable to a large number of users. Inclusive Human Machine Interaction for India presents an end-to-end case study of developing interactive technology for the common people of India. With a foreword from Prof Ashok Juhunjunwala (Professor, Indian Institute of Technology Madras), this book investigates

problems of middle-aged and elderly users in adopting interactive technologies and proposes new user interfaces and interaction techniques. It pioneers in introducing state-of-the-art eye-gaze tracking based interaction to everyday computing tasks and presents a detailed literature survey and user studies on user modelling and eye-gaze tracking. Technologies presented in this book will not only be relevant for developing countries but will also find useful applications in developed countries.

This Book Deals With All The Technologies Used In The Design Of Services Over The Web. It Begins With The Principles And Concepts Used In Internet And Worldwide Web. Html Is Explained In Two Chapters. Since Frames And Forms Are Vital Components In Interactive Web Pages, A Separate Chapter Is Dedicated With Several Examples. Javascript, The Popular Scripting Language Used In Client Side Data Validation Is Then Explained With Adequate Object Oriented Style. The Server Side Code Is Explained With Jsp. The Whole Of Jsp Is Explained And Illustrated Using Several Examples. Jsp Is Used With Jdbc For Accessing Databases. Java Database Connectivity Is Given Due Importance And Simple Web Applications Have Been Developed. Java Servlet Is Fully Explained With Several Examples. Four Minor Projects On Design And Application Are Given In The Last Four Chapters. These Projects Are Fully Explained According To The Software Development Life Cycle. The Complete Set Of Design Documents, Code And Testing Strategies Are Explained. This Book Will Serve As A Complete Textbook For Various Graduate And Postgraduate Courses.

This comprehensive text on Quality Management provides ways and means of delivering efficient and effective production/services quality to utmost satisfaction of the customers. Comprising 20 chapters, the book explains the concepts and techniques of quality management supported with related case studies. Numerical examples given in each chapter help students to understand the concept easily. Primarily designed for MBA, ME/MTech (Industrial Engineering, Production Engineering), BE/BTech (Mechanical Engineering and Production Engineering) and MSc (Operations Research and Statistical Quality Control), the book also serves as a reference for professionals/consultants to carryout projects in quality domain for manufacturing or service organisations. KEY FEATURES OF THE BOOK • Detailed coverage of process and statistical quality control • Chapters on ANOVA, orthogonal arrays and signal-to-noise ratio • A chapter on Six Sigma including Shainin techniques • A chapter on Analytical Hierarchy Process (AHP) • Presentation of Design of Experiments (DOE) techniques Audience • MBA • ME/MTech (Industrial Engineering, Production Engineering) • BE/BTech (Mechanical Engineering and Production Engineering) • MSc (Operations Research and Statistical Quality Control)

To read the foreword by Daniel B. Fishman, PhD, Rutgers University, click here. Case-based knowledge forms an essential element of the evidence base for counselling and psychotherapy practice. This book provides the reader with a unique introduction to the conceptual and practical tools required to conduct high quality case study research that is grounded in their own therapy practice or training. Drawing on real-life cases at the heart of counselling and psychotherapy practice, John McLeod makes complex debates and concepts engaging and accessible for the trainees and practitioners at all levels, and from all theoretical orientations. Key topics covered in

the book include: - the role of case studies in the development of theory, practice and policy in counselling and psychotherapy - strategies for responding to moral and ethical issues in therapy case study research - practical tools for collecting case data - 'how-to-do-it' guides for carrying out different types of case study - team-based case study research for practitioners and students - questions, issues and challenges that may have been raised for readers through their study. Concrete examples, points for reflection and discussion, and recommendations for further reading will enable readers to use the book as a basis for carrying out their own case investigation. All trainees in counselling, psychotherapy and clinical psychology are required to complete case reports, and this is the only textbook to cover the topic in real depth. The book will also be valuable to people who intend to use existing case studies to inform their practice, and it will help experienced practitioners to generate publishable case reports.

This book examines various facets of the development process such as aid, poverty, caste networks, corruption, and judicial activism. It explores the efficiency of and distributional issues related to agriculture, and the roles of macro models and financial markets, with a special emphasis on bubbles, liquidity traps and experimental markets. The importance of finite changes in trade and development, as well as that of information technology and issues related to energy and ecosystems, including sustainability and vulnerability, are analyzed. The book presents papers that were commissioned for the Silver Jubilee celebrations at the Indira Gandhi Institute of Development Research (IGIDR). The individual contributions address related development problems, ensuring a homogeneous reading experience and providing a thorough synthesis and understanding of the authors' research areas. The reader will be introduced to various aspects of development thought by leading and contemporary researchers. As such, the book represents an important addition to the literature on economic thought by leading scholars, and will be of great value to graduate students and researchers in the fields of development studies, political economy and economics in general.

This book provides a dual perspective on the Internet of Things and ubiquitous computing, along with their applications in healthcare and smart cities. It also covers other interdisciplinary aspects of the Internet of Things like big data, embedded Systems and wireless Sensor Networks. Detailed coverage of the underlying architecture, framework, and state-of-the-art methodologies form the core of the book.

Revitalizing railways as a major sustainable transport mode in modern societies faces many issues and challenges. This in-depth overview places the importance of railways in the wider context of comprehensive sustainability, which encompasses sustainable development, social and economic equity and community livability. Some scholars have described the 21st century as a period of renaissance for railways and suggest this transport mode can fulfil people's desire for high mobility with low negative environmental, social, economic and financial impacts. In light of these new expectations for railways, in both passenger and freight transport worldwide, this book offers the latest research insights on the renewed interest about railway expansions and their wide-ranging environmental, socio-economic and even political implications.

Adaptive Resource Management and Scheduling for Cloud Computing Springer Nature Human-Computer Interaction based on human computer communication is designed for the Computer Science and Engineering students and technological aficionados. In sync with syllabus of institutions offering the subject, the book focuses on designing the user-centric system software, incorporating the user behaviour and mental models. It includes topics on basic software design process and its stages, role of computation in design, computational framework for design, and computational models of users and systems. All concepts, laws and challenges are validated with cases studies and practical examples. The book appraises reader with the state-of-the-art technological development, with the underlying theme that humans come first. Few Highlights from the book: • Dedicated chapter on recent trends in the user-centric systems • Illustrative case studies on key concepts and various user-centric devices • Covers new concepts, such as, ubiquitous area and wearable devices • Addresses issues and challenges, both from the research and development perspective

This book focuses on selected research problems of contemporary railways. The first chapter is devoted to the prediction of railways development in the nearest future. The second chapter discusses safety and security problems in general, precisely from the system point of view. In the third chapter, both the general approach and a particular case study of a critical incident with regard to railway safety are presented. In the fourth chapter, the question of railway infrastructure studies is presented, which is devoted to track superstructure. In the fifth chapter, the modern system for the technical condition monitoring of railway tracks is discussed. The compact on-board sensing device is presented. The last chapter focuses on modeling railway vehicle dynamics using numerical

simulation, where the dynamical models are exploited.

India as a Pioneer of Innovation Springer

This book features a collection of high-quality research papers presented at the International Conference on Intelligent and Cloud Computing (ICICC 2019), held at Siksha 'O' Anusandhan (Deemed to be University), Bhubaneswar, India, on December 20, 2019. Including contributions on system and network design that can support existing and future applications and services, it covers topics such as cloud computing system and network design, optimization for cloud computing, networking, and applications, green cloud system design, cloud storage design and networking, storage security, cloud system models, big data storage, intra-cloud computing, mobile cloud system design, real-time resource reporting and monitoring for cloud management, machine learning, data mining for cloud computing, data-driven methodology and architecture, and networking for machine learning systems.

Invoking the notion of 'cosmopolitics' from Bruno Latour and Isabelle Stengers, this volume shows how and why cities constitute privileged sites for studying the search for and composition of common worlds of cohabitation. A cosmopolitical approach to the city focuses on the multiple assemblages of human and nonhuman actors that constitute urban common worlds, and on the conflicts and compromises that arise among different ways of assembling the city. It brings into view how urban worlds are always in the process of being subtly transformed, destabilized, decentred, questioned, criticized, or even destroyed. As such, it opens up novel questions as to the gradual and contested composition of urban life, thereby forcing us to pay more explicit attention to the politics of urban assemblages. Focusing on changing sanitation infrastructures and practices, emerging forms of urban activism, processes of economic restructuring, transformations of the built environment, changing politics of expert-based urban planning, as well as novel practices for navigating the urban everyday, the contributions gathered in this volume explore different conceptual and empirical configurations of urban cosmopolitics: agencements, assemblages, atmospheres. Taken together, the volume thus aims at introducing and specifying a novel research program for rethinking urban studies and politics, in ways that remain sensitive to the multiple agencies, materialities, concerns and publics that constitute any urban situation.

The Curious Incident of the Dog in the Night-Time New Age International

This comprehensive and well-written book presents the fundamentals of object-oriented software engineering and discusses the recent technological developments in the field. It focuses on object-oriented software engineering in the context of an overall effort to present object-oriented concepts, techniques and models that can be applied in software estimation, analysis, design, testing and quality improvement. It applies unified modelling language notations to a series of examples with a real-life case study. The example-oriented approach followed in this book will help the readers in understanding and applying the concepts of object-oriented software engineering quickly and easily in various application domains. This book is designed for the undergraduate and postgraduate students of computer science and engineering, computer applications, and information technology. KEY FEATURES : Provides the foundation and important concepts of object-oriented paradigm. Presents traditional and object-oriented software development life cycle models with a special focus on Rational Unified Process model. Addresses important issues of improving software quality and measuring various object-oriented constructs using object-oriented metrics. Presents numerous diagrams to illustrate object-oriented software engineering models and concepts. Includes a large number of solved examples, chapter-end review questions and multiple choice questions along with their answers.

It is widely recognised that the knowledge of information systems is essential in today's business organisations to survive and prosper. This book in its Second Edition, discusses all the major areas in information systems. It includes issues in the design, development and application of organisation-wide information systems and their effect on business and organisations. The issues discussed in the book supports the management of an enterprise in its planning, operation and control functions. SALIENT FEATURES OF THE BOOK • Balanced treatment of both the technical and organisational issues involved • Wide range of topics including databases, decision support systems, expert systems and system analysis • Contemporary examples from the Indian industry Though the main structure of the Second Edition remains the same, the chapters have been updated and revised as per the recent developments in the field of information technology. NEW TO THIS EDITION • Several 'Case-studies' have been incorporated at the end of each chapter. • New references have been included in the text to support the added text. • Learning objectives have been given at the beginning of each chapter. • The text is presented in an attractive manner as numerous new figures and pictures have been added.

A bestselling modern classic—both poignant and funny—about a boy with autism who sets out to solve the murder of a neighbor's dog and discovers unexpected truths about himself and the world. Nominated as one of America's best-loved novels by PBS's The Great American Read Christopher John Francis Boone knows all the countries of the world and their capitals and every prime number up to 7,057. He relates well to animals but has no understanding of human emotions. He cannot stand to be touched. And he detests the color yellow. This improbable story of Christopher's quest to investigate the suspicious death of a neighborhood dog makes for one of the most captivating, unusual, and widely heralded novels in recent years.
