This book reports on cutting-edge research into innovative system interfaces, emphasizing both lifecycle development and human-technology interaction, especially in virtual, augmented and mixed-reality systems. It describes advanced methodologies and tools for evaluating and improving interface usability and discusses new models, as well as case studies and good practices. The book addresses the human, hardware, and software factors in the process of developing interfaces for optimizing total system performance, particularly innovative computing technologies for teams dealing with dynamic environments, while minimizing total ownership costs. It also highlights the forces currently shaping the nature of computing and systems, including the need for decreasing hardware costs; the importance of portability, which translates to the modern tendency toward hardware miniaturization and technologies for reducing power requirements; the necessity of a better assimilation of computation in the environment; and social concerns regarding access to computers and systems for people with special needs. The book, which is based on the AHFE 2017 International Conference on Human Factors and System Interactions, held on July 17–21, 2017, in Los Angeles, California, USA, offers a timely survey and practice-oriented guide for systems interface users and developers alike.

The author of *The Mental Load* returns with more "visual essays which are transformative agents of change." After the success of *The Mental Load*, Emma continues in her new book to tangle with issues pertinent to women's experiences, from consent to the "power of love," from the care and attentiveness that women place on others' wellbeing and social cohesion, and how it constitutes another burden on women, to contraception, to the true nature of gallantry, from the culture of rape to diets, from safety in public spaces to retirement, along with social issues such as police violence, women's rights, and green capitalism. And, once more, she hits the mark.

A vigorous call for rethinking the field of business history. Business history needs a shake-up, Philip Scranton and Patrick Fridenson argue, as many businesses go global and cultural contexts become critical. Reimagining Business History prods practitioners to take new approaches to entrepreneurial intentions, company scale, corporate strategies, local infrastructure, employee well-being, use of resources, and long-term environmental consequences. During the past half century, the history of American business became an unusually active and rewarding field of scholarship, partly because of the primacy of postwar American capital, at home and abroad, and the rise of a consumer culture but also because of the theoretical originality of Alfred D. Chandler. In a field long given over to banal company histories and biographies of tycoons, Chandler took the subject seriously enough to ask about the large patterns and causes of corporate success. Chandler and his students found the richest material for theorizing about the course of business history in large companies and their institutional structures and cultures. Meantime, Scranton and others found smaller firms, those specializing in batch work as opposed to mass-produced goods, far closer to the norm and more telling. Scranton and Fridenson believe that the time has come for a sweeping rethinking of the field, its materials, and the kinds of questions its practitioners should be asking. How can this field develop in an age of global markets, growing information technology, and diminishing resources? A

transnational collaboration between two senior scholars, Reimagining Business History offers direction in forty-four short, pithy essays.

In this original short story from #1 New York Times bestselling author Michael Connelly, LAPD Detective Harry Bosch seeks justice for the forgotten NOTE: This file includes a preview of Michael Connelly's novel *The Crossing*. In "Switchblade," an anonymous tip puts Bosch on a case that has remained unsolved for decades, the vicious stabbing of a teenage boy whose body was found in an abandoned Old Hollywood restaurant. Cold cases are often the toughest: With no body, no murder scene, and no fingerprints, Bosch nevertheless gets lucky when DNA evidence from the murder weapon points to a known killer. But the DA insists that science alone is not enough - he needs the case to be bulletproof before he'll take it to court. Determined to speak for those who can no longer speak for themselves, Bosch has one chance to wrench a confession out of a cold-blooded killer, or risk letting him walk free for good. In this gripping, never-before-published story by "master of the crime thriller" (Huffington Post) Michael Connelly, Detective Harry Bosch quenches his thirst for justice and shows why he is "one of the most popular and enduring figures in American crime fiction" (Chicago Tribune).

"Michael Stipe's photo-journal of Patti Smith's celebrated return to touring . . . Patti's image burns into pictures with weird radioactive mystery." —Spin This book comprises Michael Stipe's intimate and evocative photos of Patti Smith on tour in 1995, along with other cultural celebrities who appeared with her, such as Allen Ginsberg. In addition to text by Stipe, William S. Burroughs, and Patti Smith, there is also commentary from Thurston Moore, Kim Gordon, Lenny Kaye, Tom Verlaine, and more. "This isn't a traditional book of portraits . . . The overwhelming mood is one of disjunction, claustrophobia, exhaustion, temporariness—and the effect is raw and intimate." —Publishers Weekly "An energetic and gracious tribute to not only a great artist, but also to a powerful moment in her oeuvre—and to those who contributed to it and shared in it." —New York Journal of Books "Stipe's personal friendship lends something greater to the overall vision of this book. It isn't simply a set of snapshots of performances, but rather a collection of rare moments. The personal nature of the anthology makes it all the more enticing and enjoyable. Smith, in all her glory and awe-inspiring talent, is portrayed in the truest light." —Verbicide Magazine "A fascinating book . . . including appearances by Allen Ginsberg, Gregory Corso, Tom Verlaine, the members of Sonic Youth and more . . . and the short text tributes to Smith by these people, scattered throughout the manuscript, are well worth your time." —Chicago Center for Literature and Photography

This book is a major contribution to our understanding of the condition of the immigrant and it will transform the reader's understanding of the issues surrounding immigration. Sayad's book will be widely used in courses on race, ethnicity, immigration and identity in sociology, anthropology, cultural studies, politics and geography. An outstanding and original work on the experience of immigration and the kind of suffering involved in living in a society and culture which is not one's own; describes how immigrants are compelled, out of respect for themselves and the group that allowed them to leave their country of origin, to play down the suffering of emigration; Abdelmalek Sayad, was an Algerian scholar and close associate of the French sociologist Pierre Bourdieu - after

Sayad's death, Bourdieu undertook to assemble these writings for publication; this book will transform the reader's understanding of the issues surrounding immigration.

Paper discusses the factors that contribute to the spread of corruption as well as the implications of corruption for markets and for public sector activities. It is argued that corruption can be contained mainly by a scaling down of the public sector activities that stimulate its growth.

The fascinating story of a century-old automobile dynasty Fiat is one of the world's largest automakers, but when it made headlines by grabbing control of a bankrupt Chrysler in 2009 it was unknown in the U.S. Fiat's against-all-odds swoop on Chrysler---masterminded by Sergio Marchionne, the Houdini-like manager who saved Fiat from its own near-collapse in 2005 -- has made the automaker one of the most unlikely winners of the financial crisis. *Mondo Agnelli* is a new book that looks at the chain of unpredictable events triggered by the death of Gianni Agnelli in 2003. Gianni, the charismatic, silver-haired power broker and style icon, was the patriarch who had led the company founded by his grandfather in 1899. But Gianni's own son had committed suicide. Without a mature heir, the dynasty and Fiat were rudderless. Backed by Gianni's closest advisors, his serious, shy, and determined grandson John plucked Marchionne from obscurity. Together, they saved the family company and, inadvertently, positioned Fiat as a global trailblazer when the global storm hit. A classic story of ingenuity and hard work, the book portrays a business dynasty that triumphed over adversity and family tragedy because of its own smarts, sweat, and ability to bend the rules. An engaging tale for those interested in the stories behind the economic crash, the book contains never-before reported material about how Fiat succeeded in making Chrysler profitable where both Daimler AG and Cerberus, its previous owners, had failed. A story for a wide audience, from car buffs, business readers, lovers of Italy, and anyone fascinated by the lifestyle of Europe's most glamorous industrial dynasty, this book tells the tale of how Fiat achieved the seemingly impossible -- turning around an American automotive icon everyone else had given up for dead.

A multi-disciplinary approach to transportation planning fundamentals The Transportation Planning Handbook is a comprehensive, practice-oriented reference that presents the fundamental concepts of transportation planning alongside proven techniques. This new fourth edition is more strongly focused on serving the needs of all users, the role of safety in the planning process, and transportation planning in the context of societal concerns, including the development of more sustainable transportation solutions. The content structure has been redesigned with a new format that promotes a more functionally driven multimodal approach to planning, design, and implementation, including guidance toward the latest tools and technology. The material has been updated to reflect the latest changes to major transportation resources such as the HCM, MUTCD, HSM, and more, including the most current ADA accessibility regulations. Transportation planning has historically followed the rational planning model of defining objectives, identifying problems, generating and evaluating alternatives, and developing plans. Planners are increasingly expected to adopt a more multi-disciplinary approach, especially in light of the rising importance of sustainability and environmental concerns. This book presents the fundamentals of transportation planning in a multidisciplinary context, giving readers a practical reference for day-to-day answers. Serve the needs of all users Incorporate safety into the planning process Examine the latest transportation planning software packages Get up to date on the latest standards, recommendations, and codes Developed by The Institute of Transportation Engineers, this book is the culmination of over seventy years of transportation planning solutions, fully updated to reflect the needs of a changing society. For a comprehensive guide with practical answers, The Transportation Planning Handbook is an essential reference.

This book views Samsung Electronics in terms of corporate life cycle as well as product portfolio and strategy. It also examines the issues Samsung faces as it proceeds further into the 21st century. Written from the perspective of an experienced commentator on Korean and global business, this book presents not simply a narrative or an adulatory and uncritical account of Samsung's rise, but a considered analysis of the secrets of success that both business students and CEOs will want to read and consider applying to their own companies.

World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic

Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

One of the main challenges of our time is to be able to guarantee energy supply at a reasonable price. Policy makers, international institutions and the private sector increasingly look to the oceans as a significant source of energy. The Law of the Sea provides the legal framework within which any maritime activity is performed and strikes a balance between the multiple activities that can take place simultaneously in the same maritime zone. This volume addresses some of the main legal challenges raised by the expansion of the ocean energy sector and its consequences for the relevant international normative and institutional framework. Some of the major themes explored include energy sources and the competition for marine space, energy security, private actors and corporate social responsibility, fragmentation or integration, evolution and reinforcement of international law and liability.
