The Effectiveness of Mathematics

Teaching in Primary Schools: Lessons

from England and China provides a

unique insight into the mathematics

classrooms of these two countries and

arrives at a time when the world is eager

to know how Chinese learners

consistently excel at learning

mathematics and other core subjects.

Showcasing the kinds of teaching

methods that work within and across

countries, this book presents a rich

collection of views, including those from

teachers, their native colleagues, their

foreign colleagues and the researcher,

regarding the quality of mathematics

teaching today. Interweaving scientific

results about teaching and learning

evaluations with multiple perspectives of

various roles in and out of the classroom,

Miao and Reynolds offer insights into

how and why different approaches of

teaching have led to different learning

outcomes in mathematics

internationally. Building on rigid and

robust analyses of the most up-to-date

data in England and China, the book indicates that it is through changing teaching rather than changing teachers that mathematics learning can be improved, because it is what teachers do in the classroom that really makes a big difference. Containing four decades of wisdom from the field of teaching effectiveness research, this book is essential reading for all who want to improve the quality of mathematics teaching worldwide. This book is particularly relevant for educational researchers, postgraduate students and teachers, as well as school leaders, policymakers and parents.

Pratiyogita Darpan Oswaal Books and

Learning Private Limited

English Olympiad

Communications Group

This volume documents international,

national, and small-scale testing and

assessment projects of English language

education for young learners, across a

range of educational contexts. It covers

three main areas: age-appropriate ‘can

do statements’ and task types for

teaching and testing learners between

the ages of 6 to 13; innovative

approaches to self-assessment,

diagnostic testing, self-perception, and

computer-based testing; and findings on

how young learners perform on

vocabulary, listening, speaking,

pronunciation, and reading

comprehension tests in European and

Asian contexts. Early language learning

has become a major trend in English

language education around the globe. As

a result of the spread of teaching English

to a growing number of young children,

assessment of and for learning have

emerged as key issues. In line with this

development, there is a clear and

emerging need to make early language

programs accountable and to assess both the progress children make over time and to quantify their achievement at various stages of development. This volume informs stakeholders about the realistic goals of early language learning, their efficiency, and how much progress children make over time.
