*Discorrelated Images* Bloomsbury  
Publishing

The authors demonstrate that maps of the natural, physical world are just as culturally and socially constructed as any map of property or territory.

*The Natures of Maps* Seven Stories Press  
Antimicrobial Stewardship (AMS), Volume  
Two includes the experience of ESGAP

workshops and courses on antibiotic stewardship since 2012. It combines clinical and laboratory information about AMS, with a focus on human medicine. The ESCMID study group on antibiotic policies (ESGAP) is one of the most productive groups in the field, organizing courses and workshops. This book is an ideal tool for the participants of these workshops. With short chapters (around 1500 words) written on different topics, the authors insisted on the following points: A 'hands on', practical approach, tips to increase success, a description of the most

common mistakes, a global picture (out- and inpatient settings, all countries) and a short list of 10-20 landmark references. - Focuses on the most recent antimicrobial stewardship strategies - Provides a detailed description of laboratory support - Offers a balanced synthesis of basic and clinical sciences for each individual case, presenting clinical courses of the cases in parallel with the pathogenesis and detailed microbiological information for each infection - Describes the prevalence and incidence of the global issues and current therapeutic approaches - Presents

the measures for infection control  
Opening Bazin Oxford University Press  
 What Cinema Is! offers an engaging answer to Andre Bazin's famous question, exploring his 'idea of cinema' with a sweeping look back at the near century of Cinema's phenomenal ascendancy. Written by one of the foremost film scholars of our time Establishes cinema's distinction from the current enthusiasm over audio-visual entertainment, without relegating cinema to a single, older mode Examines cinema's institutions and its social force through the qualities of key films Traces the history of an idea that has made cinema supremely alive to (and in) our times

**Post Cinematic Affect** Kerber Verlag  
 "Worth had courage and originality enough not to take pictures for granted, but thought and struggled with some of the most difficult problems that cinematographers (and researchers in visual media) are faced with."—Edward T. Hall One of the central figures in the development of the study of visual communication, Sol Worth (1922-1977) was a filmmaker and painter before he turned to academic pursuits. He began

with the question of how film could be understood and studied as a medium of communication and from there he moved on to the larger and more profound questions about the nature of visual media in general and the role that visual images play in shaping and constructing reality. Worth's pioneering work with Navajo filmmakers broadened our understanding of visual perception and communication even as it presented anthropologists with a means to achieve one of their most cherished goals: somehow to see the world through the eyes of their informants. The papers in this volume trace the development of Worth's thinking and research as he outlined the problems and issues that must be faced in the study of visual communication. He went further than anyone else in setting the intellectual agenda for the field, drawing upon such diverse disciplines as anthropology, sociology, psychology, linguistics, and semiotics. His broader interests are reflected in several papers that apply to problems and concerns of a more practical nature. Among them is Worth's innovative paper on the use of film in education. Worth's contributions to the serious task of

understanding the role and potential of visual media and visual communication extend far beyond the intellectual realms of theory and speculation. Indeed, they speak clearly to issues facing all of us in a world that is so much shaped by visual communication.

Intercultural Counseling Peter Lang Incorporated, International Academic Publishers

An examination of the Sapir-Whorf hypothesis on the relationship between grammar and thought.

**Rediscovering the Democratic Purposes of Education** Routledge  
 Hailed as the permanent record of fleeting moments, the cinema emerged at the turn of the nineteenth century as an unprecedented means of capturing time-- and this at a moment when disciplines from physics to philosophy, and historical trends from industrialization to the expansion of capitalism, were transforming the very idea of time. In a work that itself captures and reconfigures the passing moments of art, history, and philosophy, Mary Ann Doane shows how the cinema, representing the singular instant of chance and ephemerality in the

face of the increasing rationalization and standardization of the day, participated in the structuring of time and contingency in capitalist modernity. At this book's heart is the cinema's essential paradox: temporal continuity conveyed through "stopped time," the rapid succession of still frames or frozen images. Doane explores the role of this paradox, and of notions of the temporal indeterminacy and instability of an image, in shaping not just cinematic time but also modern ideas about continuity and discontinuity, archivability, contingency and determinism, and temporal irreversibility. A compelling meditation on the status of cinematic knowledge, her book is also an inquiry into the very heart and soul of modernity.

[Pride Against Prejudice](#) Academic Press

This volume brings us closer to the dynamics of the educational world, especially students, from a wide range of national and regional scenarios, with a special focus on Europe and Latin America. In this way, a plural panorama is shown, in which the stories centered on the usual protagonists of the 1968 processes are accompanied by other scenarios, often considered secondary, but which this

volume inserts in a more general story that helps us understand how the processes of the 60s were not concrete or national, but got an absolute regional and global significance. We see a complex process of transnational demand that ranged from Eastern Europe, included in the Soviet bloc, to the very heart of the Western Hemisphere, with the United States as the main axis, passing through the politically varied Western Europe, submitted to the same processes and cultural influences. In this sense, to the works that deal with the United States and France, are added others focused on Italy, Spain and Brazil, as priority focus areas, together with other European and Latin American landscapes: Great Britain, Portugal, Greece, Slovakia, Hungary, Chile, Uruguay and Mexico, without missing, in addition, the case of one of the most unique actors on the international scene: the State of Israel. With this volume, we want to continue advancing in the knowledge of the educational world of the second half of the 20th century. Great are the challenges of this world at the beginning of the 21st century and many of them were already evident in 1968. Others

have materialized as a result of those events. To confront both of them, we must first identify and analyze them, as well as being aware of their magnitude. We hope that all this work can contribute to this aim.

[Studying Visual Communication](#)

FahrenHouse

This work examines the reasons why anthropologists have not used the camera as a research instrument or film as a means of communicating ethnographic knowledge. It suggests that images and words in this discipline operate on different logical levels; that they are hierarchically related; that whereas writings may encompass the images produced by film, the inverse of this cannot be true. The author argues for this position further by suggesting that the visual is to the written mode as "thin description" (giving a record of the form of behaviour) is to "thick description" (giving an account of meaning).

[The Sociology-philosophy Connection](#) John Hunt Publishing

When Dylann Roof murdered nine black parishioners in a Charleston church, narratives of lone wolves and Confederate

flags masked the organizations that inspired Roof and their connections to politicians at local, state and federal levels. Trace the connections further back and you find darker levels of fascism. Fascism is not used simply as an epithet here. A terrifying tour of the history and influence of neo-fascists, *Against the Fascist Creep* maps the connections and names names, showing how infiltration is a conscious program for nationalist and neo-Nazi groups.

*Enemy of the Sun* Cognella Academic Publishing

Cancer treatment is complex and calls for a diverse set of services. Radiation therapy is recognized as an essential tool in the cure and palliation of cancer. Currently, access to radiation treatment is limited in many countries and non-existent in some. This lack of radiation therapy resources exacerbates the burden of disease and underscores the continuing health care disparity among States. Closing this gap represents an essential measure in addressing this global health equity problem. This publication presents a comprehensive overview of the major topics and issues to be taken into

consideration when planning a strategy to address this problem, in particular in low and middle income countries. With contributions from leaders in the field, it provides an introduction to the achievements and issues of radiation therapy as a cancer treatment modality around the world. Dedicated chapters focus on the new radiotherapy technologies, proton beams, carbon ion, intraoperative radiotherapy, radiotherapy for children, treatment of HIV-AIDS malignancies, and costing and quality management issues.

*The Emergence of Cinematic Time*  
Routledge

In 1944, Franklin Delano Roosevelt gave a State of the Union Address that was arguably the greatest political speech of the twentieth century. In it, Roosevelt grappled with the definition of security in a democracy, concluding that "unless there is security here at home, there cannot be lasting peace in the world." To help ensure that security, he proposed a "Second Bill of Rights" -- economic rights that he saw as necessary to political freedom. Many of the great legislative achievements of the past sixty years stem from Roosevelt's

vision. Using this speech as a launching point, Cass R. Sunstein shows how these rights are vital to the continuing security of our nation. This is an ambitious, sweeping book that argues for a new vision of FDR, of constitutional history, and our current political scene.

**Digital Passages: Migrant Youth 2.0**  
Manchester University Press

Most social scientists and philosophers claim that sociology and philosophy are disjoint fields of inquiry. Some have wondered how to trace the precise boundary between them. Mario Bunge argues that the two fields are so entangled with one another that no demarcation is possible or, indeed, desirable. In fact, sociological research has demonstrably philosophical pre-suppositions. In turn, some findings of sociology are bound to correct or enrich the philosophical theories that deal with the world, our knowledge of it, or the ways of acting upon it. While Bunge's thesis would hardly have shocked Mill, Marx, Durkheim, or Weber, it is alien to the current sociological mainstream and dominant philosophical schools. Bunge demonstrates that philosophical problematics arise in social science

research. A fertile philosophy of social science unearths critical presuppositions, analyzes key concepts, refines effective research strategies, crafts coherent and realistic syntheses, and identifies important new problems. Bunge examines Marx's and Durkheim's thesis that social facts are as objective as physical facts; the so-called Thomas theorem that refutes the behaviorist thesis that social agents react to social stimuli rather than to the way we perceive them; and Merton's thesis on the ethos of basic science which shows that science and morality are intertwined. He considers selected philosophical problems raised by contemporary social studies and argues forcefully against tolerance of shabby work in academic social science and philosophy alike.

**Theories of Reading** Basic Books  
 NATIONAL BESTSELLER • The acclaimed author of *Founding Gardeners* reveals the forgotten life of Alexander von Humboldt, the visionary German naturalist whose ideas changed the way we see the natural world—and in the process created modern environmentalism. "Vivid and exciting.... Wulf's pulsating account brings this dazzling figure back into a dazzling, much-

deserved focus." —The Boston Globe  
 Alexander von Humboldt (1769-1859) was the most famous scientist of his age, a visionary German naturalist and polymath whose discoveries forever changed the way we understand the natural world. Among his most revolutionary ideas was a radical conception of nature as a complex and interconnected global force that does not exist for the use of humankind alone. In North America, Humboldt's name still graces towns, counties, parks, bays, lakes, mountains, and a river. And yet the man has been all but forgotten. In this illuminating biography, Andrea Wulf brings Humboldt's extraordinary life back into focus: his prediction of human-induced climate change; his daring expeditions to the highest peaks of South America and to the anthrax-infected steppes of Siberia; his relationships with iconic figures, including Simón Bolívar and Thomas Jefferson; and the lasting influence of his writings on Darwin, Wordsworth, Goethe, Muir, Thoreau, and many others. Brilliantly researched and stunningly written, *The Invention of Nature* reveals the myriad ways in which Humboldt's ideas form the foundation of modern

environmentalism—and reminds us why they are as prescient and vital as ever.

*Cinema in the Digital Age* Cambridge University Press

First Published in 1988. *Visual Anthropology* is a book series devoted to the illumination of the human condition through a systematic examination of all that is made to be seen. It is our intention to demonstrate the value of an anthropological approach to the study of the visual and pictorial world. The anthropological filmmaker, just like the ethnographer, must be content to present something about a dynamic process at a particular moment in time regardless of the fact that all of the variables are constantly in flux. The purpose of this work is to make available a collection of articles by individuals who are both anthropologists and filmmakers.

*In Our Own Image* Amsterdam University Press

Three sociologists from the University of Barcelona set out not the theories they like best, but the ones that are most used, and most referred to in contemporary sociological practice. They write primarily for students of sociology, but also, they

say, for social activists involved in daily struggle. Annotation (c)2003 Book News, Inc., Portland, OR (booknews.com). *Anthropological Filmmaking* Verso "[This anthology] addresses the gap between international standard-setting prohibiting international sex crimes and actual accountability for individuals who are responsible for such crimes. The book provides detailed analysis of the legal requirements of international sex crimes and types of fact that can be used to meet these requirements. It includes a unique knowledge-base that digests international case law on such crimes. The anthology also contains several studies of institutional and evidentiary challenges in the prosecution of international sex crimes"--Series pref.

### **The Invention of Nature** Plume

The recent financial meltdown has brought notable changes to the global practice of health care changes that have often escaped the American news media. Although Western managed-care corporations previously had strengthened their influence abroad, now many countries are considering new approaches to health care for their citizens. The untold

story of how corporations have influenced global health care and the impacts now in America as the system rapidly shifts is Dr. Waitzkin's subject in his provocative new book. We now live in a new era in which the prospects for more humane approaches to health care are taking root. Strengthening access and improving public health are at the heart of the many previously little-noted struggles and actions by individuals, groups, and whole nations to put control back in the hands of patients and practitioners, as Americans of many political stripes seem to universally seek. The impacts of these changes in the United States are considerable, and they are amply illustrated by Dr. Waitzkin as the United States attempts to reorient its own system of care. Selected as the 2012 winner of the Freidson Outstanding Publication Award by the American Sociological Association for its "bold and timely analysis of the global political economy of contemporary crises in health and medical care. By presenting the lessons learned from social medicine (past and present), [it] outlines a macro-sociologically informed response to these crises.""

On the History of Film Style Routledge  
Fred Ritchin's "In Our Own Image" is a comprehensive account of computer technology's impact on what we see and, ultimately, what we believe about the world. Both a history of photojournalism and a primer of computer technology, "In Our Own Image" is a philosophy of vision and reality for the twenty-first century. Extensively revised and updated, "In Our Own Image" is sure to remain a staple of one of the most important debates for many years to come.

### Human Survival and Consciousness

Evolution Harvard University Press

In addition to the apocalyptic prospect of global nuclear destruction, there are other dismal scenarios involving resource and environmental issues that are less imminent but still serious in the long term. Past analyses, seeking remedies, have focused on symptoms rather than causes. They represent extensions and expressions of the same philosophies and strategies that created these situations. This book brings a fresh and optimistic perspective to the problem area. It explores modern consciousness research and transpersonal psychology for practices

that accelerate the development of consciousness. It covers a wide range from laboratory techniques of experimental psychiatry, transpersonal psychotherapies, and Jungian psychology to the Oriental and Western mystical traditions.

*Globalizing the student rebellion in the long '68* Pickle Partners Publishing

What is the fate of cinema in an age of new technologies, new aesthetic styles, new modes of cultural production and consumption? What becomes of cinema

and a century-long history of the moving image when the theatre is outmoded as a social and aesthetic space, as celluloid gives over to digital technology, as the art-house and multiplex are overtaken by a proliferation of home entertainment systems? The Orientation of Future Cinema offers an ambitious and compelling argument for the continued life of cinema as image, narrative and experience. Commencing with Lumière's Arrival of a Train at a Station, Bruce Isaacs

confronts the threat of contemporary digital technologies and processes by returning to cinema's complex history as a technological and industrial phenomenon. The technology of moving images has profoundly changed; and yet cinema materialises ever more forcefully in digital capture and augmentation, 3-D perception and affect, High Frame Rate cinema, and the evolution of spectacle as the dominant aesthetic mode in contemporary studio production.
