KENDALL CABRERA

Report from Commissioners Inspectors Springer

This PhD thesis is dedicated to a subfield of elementary particle physics called "Flavour Physics". The Standard Model of Particle Physics (SM) has been confirmed by thousands of experimental measurements with a high precision. But the SM leaves important questions open, like what is the nature of dark matter or what is the origin of the matter-antimatter asymmetry in the Universe. By comparing high precision Standard Model calculations with extremely precise measurements, one can find the first glimpses of the physics beyond the SM – currently we see the first hints of a potential breakdown of the SM in flavour observables. This can then be compared with purely theoretical considerations about new physics models, known as model building. Both precision calculations and model building are extremely specialised fields and this outstanding thesis contributes significantly to both topics within the field of Flavour Physics and sheds new light on

the observed anomalies.

NBS Special Publication New York : New York University Press

This book describes the risk management methodology as a specific process, a theory, or a procedure for determining your assets, vulnerabilities, and threats and how security professionals can protect them. Risk Management for Security Professionals is a practical handbook for security managers who need to learn risk management skills. It goes beyond the physical security realm to encompass all risks to which a company may be exposed. Risk Management as presented in this book has several goals: Provides standardized common approach to risk management through a framework that effectively links security strategies and related costs to realistic threat assessment and risk levels Offers flexible yet structured framework that can be applied to the risk assessment and decision support process in support of your business or organization Increases awareness in terms of potential loss impacts, threats and vulnerabilities to organizational assets Ensures that

various security recommendations are based on an integrated assessment of loss impacts, threats, vulnerabilities and resource constraints Risk management is essentially a process methodology that will provide a cost-benefit payback factor to senior management. Provides a stand-alone guide to the risk management process Helps security professionals learn the risk countermeasures and their pros and cons Addresses a systematic approach to logical decision-making about the allocation of scarce security resources

This book is the publication of my PhD dissertation and is written in the corresponding style. The included research provides explorations and investigative reflections on Rollenwahrnehmung (a newly coined phrase meaning role perception/fulfillment), Perspective and Space through Virtual Reality (VR) game interfaces. A number of important topics will be addressed, like the creation of new experiences in the context of VR, the extension and new development of various interaction paradigms, various User Experience (UX) aspects and user guidance in a sophisticated new

medium. Placed in the field of design practice, this research focuses on the creation of digital gaming artifacts, while extrapolating insights and guidelines concerning VR interfaces. Hence, this practice-based research is derived from a portfolio of specifically developed interactive artifacts, following the methodological approach of Constructive Design Research. These include the VR related games Nicely Dically, LizzE - And the Light of Dreams and Gooze. They were used for various Lab experiments and Showroom presentations, while continually being refined throughout an iterative process. Nicely Dically is an abstract game based on physics. In Local Multiplayer, up to four players are able to compete or collaborate. It is not a VR game per se, but features both, Monoscopic and 3D Stereoscopic Vision modes, which were tested in an experiment on their effect on Player Immersion. LizzE - And the Light of Dreams is a Singleplayer 3rd Person Hack and Slay game based in a fantasy universe. In an experiment, the game was used to primarily investigate in which ways 3rd Person VR games can work for a broad audience, regarding camera behavior. Gooze is a 1st Person VR puzzle game, taking place in a realistic horror environment with

supernatural aspects. It was designed with diverse VR interaction technologies in mind and offers users different options to play the game, depending on available hardware and preferences. The Locomotion and Virtual Object Interaction mechanics were tested in an experiment regarding their UX. In summary, this book illustrates various game, interface and VR designs, informing the emerging field of VR game development of the relationship between UX, interfaces and gameplay. Furthermore, guidelines for designing and developing specific aspects of VR games were identified and each single artifact can be used as a design and development precedent for practice and academia.
