Thinking about Research SAGE Publications

This book focuses on modeling and simulation research that advances the current state-of-the-art regarding human factors in this area. It reports on cutting-edge simulators such as virtual and augmented reality, on multisensory environments, and on modeling and simulation methods used in various applications, including surgery, military operations, occupational safety, sports training, education, transportation and robotics. Based on the AHFE 2019 International Conference on Human Factors in Simulation and Modeling, held on July 24-28, 2019, in Washington D.C., USA, the book serves as a timely reference guide for researchers and practitioners developing new modeling and simulation tools for analyzing or improving human performance. It also offers a unique resource for modelers seeking insights into human factors research and more feasible and reliable computational tools to foster advances in this exciting research field.

These books provide an invaluable reference for teachers of psychology. The plethora of teaching strategies and techniques discussed should serve to improve the quality of their teaching. For those who teach high school, college, and graduate students in psychology, education, and the social sciences, these volumes present immediate practical applications and rich sources of ideas. They contain the collective experiences of teachers who have successfully dealt with students' difficulty in mastering important concepts about human behavior. Volume 1 addresses teaching strategies for courses that make up the core of most psychology curricula; introductory psychology, statistics, research methods, and the history of psychology. Volume 2 discusses teaching physiology, perception, learning, memory, and developmental psychology. Volume 3 deals with teaching personality, abnormal clinical-counseling, and social psychology. Each volume contains a table listing the articles in that volume and identifying the primary and secondary courses in which each demonstration can be used.

"Thrilling and illuminating."—LA Times "A hypnotic psychological thriller." —People A chance encounter sparks an unrelenting web of lies in this new gripping and complex psychological thriller from the New York Times bestselling author of *The Good Girl* and the upcoming page-turner *Don't You Cry*, Mary Kubica She sees the teenage girl on the train platform, standing in the pouring rain, clutching an infant in her arms. She boards a train and is whisked away. But she can't get the girl out of her head... Heidi Wood has always been a charitable woman: she works for a nonprofit, takes in stray cats. Still, her husband and daughter are horrified when Heidi returns home one day with a young woman named Willow and her four-month-old baby in tow. Disheveled and apparently homeless, this girl could be a criminal—or worse. But despite her family's objections, Heidi invites Willow and the baby to take refuge in their home. Heidi spends the next few days helping Willow get back on her feet, but as clues into Willow's past begin to surface, Heidi is forced to decide how far

she's willing to go to help a stranger. What starts as an act of kindness quickly spirals into a story far more twisted than anyone could have anticipated. Essential Evolutionary Psychology introduces students to the core theories, approaches, and findings that are the necessary foundations for developing an understanding of evolutionary psychology. It offers a sound, brief, and student friendly explication of how evolutionary theory has been and is applied in psychology. The book unpicks the very essence of human evolution, and how this knowledge is used to give evolutionary accounts of four of the central pillars of human behavior - cooperation, attraction, aggression, and family formation. It also covers evolutionary accounts of

abnormal behavior, language and culture.

This volume is based around 14 chapters and two critical analyses which provide new perspectives on important organizational constructs. The first half of the book provides chapters by advanced graduate students who are making their first contributions to understanding organizational behavior. The second half of the book provides chapters illustrating new views of organizational constructs but from the perspectives of more established researchers in the field. All chapters share a common theme of attempting to provide new ways of viewing organizations and organizational behavior. Each chapter is based on the premise that, when presented with problems that seem impossible to solve, often the best results are achieved by finding new perspectives on the basic constructs being studied. These new perspectives provide insights which illuminate the problems for the theory of organizations as well as improving the ability of organizational members to solve practical organizational problems.

Points per pound. The University of Chicago's annual Scavenger Hunt (or "Scav") is one of the most storied college traditions in America. Every year, teams of hundreds of competitors scramble over four days to complete roughly 350 challenges. The tasks range from moments of silliness to 1,000-mile road trips, and they call on participants to fully embrace the absurd. For students it is a rite of passage, and for the surrounding community it is a chance to glimpse the lighter side of a notoriously serious university. We Made Uranium! shares the stories behind Scav, told by participants and judges from the hunt's more than thirty-year history. The twenty-three essays range from the shockingly successful (a genuine, if minuscule, nuclear reaction created in a dorm room) to the endearing failures (it's hard to build a carwash for a train), and all the chicken hypnotisms and permanent tattoos in between. Taken together, they show how a scavenger hunt once meant for blowing off steam before finals has grown

into one of the most outrageous annual traditions at any university. The tales told here are absurd, uplifting, hilarious, and thought-provoking—and they are all one hundred percent true.

World Almanac For Kids Scavenger Hunts Oxford University Press

While the 1950s have been popularly portrayed on television and in the movies and literature as a conformist and conservative age, the decade is better understood as a revolutionary time for politics, economy, mass media, and family life. Magazines, films, newspapers, and television of the day scrutinized every aspect of this changing society, paying special attention to the lifestyles of the middle-class men and their families who were moving to the suburbs newly springing up outside American cities. Much of this attention focused on issues of masculinity, both to enforce accepted ideas and to understand serious departures from the norm. Neither a period of "male crisis" nor yet a time of free experimentation, the decade was marked by contradiction and a wide spectrum of role models. This was, in short, the age of Tennessee Williams as well as John Wayne. In *Men in the Middle*, James Gilbert uncovers a fascinating and extensive body of literature that confronts the problems and possibilities of expressing masculinity in the 1950s. Drawing on the biographies of men who explored manhood either in their writings or in their public personas, Gilbert examines the stories of several of the most important figures of the day—revivalist Billy Graham, playwright Tennessee Williams, sociologist David Riesman, sex researcher Alfred Kinsey, Playboy literary editor Auguste Comte Spector, and TV-sitcom dad Ozzie Nelson—and allows us to see beyond the inherited stereotypes of the time. Each of these stories, in Gilbert's hands, adds crucial dimensions to our understanding of masculinity the 1950s. No longer will this era be seen solely in terms of the conformist man in the gray flannel suit or the Marlboro Man.

Here's everything you should have been taught in sex education, fascinatingly presented with all the science fact, and a light-hearted touch. An Everyman's humorous look at the real differences—biological, historical, psychological—between men and women . . . this fact-based but fun and provocative book provides insight into what really drives behavior and interactions between men and women. Men talk about women to men. Women talk about men to women. Men and women talk to each other (or try to) about relationships. *It's Not You, It's Biology* provides insight, ammunition, snappy comebacks, and interesting cocktail party banter for everyone who ever wondered why we do what we do vis-a-vis the opposite sex.

The bombing of Pearl Harbor, the assassination of President Kennedy, the explosion of the space shuttle Challenger: every generation has unforgettable events, the shared memory of which can create fleeting intimacy among strangers. These public memories, combined with poignant personal moments—the first day of college, a baseball game with one's father, praise from a mentor—are the critical shaping events of individual lives. Although experimental memory studies have long been part of empirical psychology, and psychotherapy has focused on repressed or traumatizing memories, relatively little attention has been paid to the inspiring, touching, amusing, or revealing moments that highlight most lives. What makes something unforgettable? How do we learn to share the significance of memories? David Pillemer's research, brought together in this gracefully written book, extends the current study of narrative and specific memory. Drawing on a variety of evidence

and methods--cognitive and developmental psychology, cross-cultural study, psychotherapy case studies, autobiographies and diaries--Pillemer elaborates on five themes: the function of memory; how children learn to construct and share personal memories; memory as a complex interactive system of image, emotion, and narrative; individual and group differences in memory function and performance; and how unique events linger in memory and influence lives. A provocative last chapter, full of striking examples, considers potential variations in memory across gender, culture, and personality. *Momentous Events, Vivid Memories* is itself a compelling and memorable book.

A guide to an evidence-based approach for teaching college-level psychology courses *Teaching Psychology* offers an evidence-based, student-centered approach that is filled with suggestions, ideas, and practices for teaching college-level courses in ways that contribute to student success. The authors draw on current scientific studies of learning, memory, and development, with specific emphasis on classroom studies. The authors offer practical advice for applying scholarly research to teaching in ways that maximize student learning and personal growth. The authors endorse the use of backward course design, emphasizing the importance of identifying learning goals (encompassing skills and knowledge) and how to assess them, before developing the appropriate curriculum for achieving these goals. Recognizing the diversity of today's student population, this book offers guidance for culturally responsive, ethical teaching. The text explores techniques for teaching critical thinking, qualitative and quantitative reasoning, written and oral communication, information and technology literacy, and collaboration and teamwork. The authors explain how to envision the learning objectives teachers want their students to achieve and advise how to select assessments to evaluate if the learning objectives are being met. This important resource: Offers an evidence-based approach designed to help graduate students and new instructors embrace a student-centered approach to teaching; Contains a wealth of examples of effective student-centered teaching techniques; Surveys current findings from the Scholarship of Teaching and Learning; Draws on the American Psychological Association's five broad goals for the undergraduate Psychology major and shows how to help students build life-long skills; and, Introduces Universal Design for Learning as a framework to support diverse learners. *Teaching Psychology* offers an essential guide to evidence-based teaching and provides practical advice for becoming an effective teacher. This book is designed to help graduate students, new instructors, and those wanting to update their teaching methods. It is likely to be particularly useful for instructors in psychology and other social science disciplines.

Essays in Honor of Wilbert J. McKeachie and Charles L. Brewer Pearson College Division

After a long, frightening journey, a Seeker of Truth reaches the top of a mountain and finds the cave

of the Wise One. He says, O, Wise One, I have come many miles and suffered many hardships, to ask you one question. Ask, says the Wise One. What is the meaning of life?, says the pilgrim. The Wise One pauses, smiles slightly, and replies, You have come far and seem to me worthy, so I shall give you what you seek--the truth. The answer is in your question and this journey is your life. Go back down the mountain. When you arrive, you will know how much time you have wasted, and you will have no more time left. So, give me your watch. Why is life so mysterious and why is its purpose so elusive to us? It may be that we have looked for the meaning of life in the wrong places, as though in a nightmarish scavenger hunt arranged by the Prince of Darkness himself. From one moment to another, we thought it was money or power or fame or honor or comfort or some other pleasure of the flesh, only to see them, finally, as false clues leading to a mountain we shouldn't have climbed. This book records an inquiry that found the meaning of life by discovering the meaning of death. This is reflected in the words and behavior of those who decide to die--the suicides. These poor souls have much to teach us, for they have measured out for us the value of death, from which we can calculate the value of life, its reciprocal. So a study of suicide leads to the truth about life, yours and mine. This book guides you to that revelation. The surprise of the book is that you will discover that you knew it all along. The promise of the book is that you will know that you know.

The Gilded Life of Matilda Duplaine\Come Away with Me\Pretty Baby\The Good Girl\The Wonder of All Things\Little Mercies Routledge

With its control of sugar plantations in the Caribbean and tea, cotton, and indigo production in India, Britain in the eighteenth and nineteenth centuries dominated the global economy of tropical agriculture. In *Colonizing Nature*, Beth Fowkes Tobin shows how dominion over "the tropics" as both

a region and an idea became central to the way in which Britons imagined their role in the world. Tobin examines georgic poetry, landscape portraiture, natural history writing, and botanical prints produced by Britons in the Caribbean, the South Pacific, and India to uncover how each played a crucial role in developing the belief that the tropics were simultaneously paradisiacal and in need of British intervention and management. Her study examines how slave garden portraits denied the horticultural expertise of the slaves, how the East India Company hired such artists as William Hodges to paint and thereby Anglicize the landscape and gardens of British-controlled India, and how writers from Captain James Cook to Sir James E. Smith depicted tropical lands and plants. Just as mastery of tropical nature, and especially its potential for agricultural productivity, became key concepts in the formation of British imperial identity, *Colonizing Nature* suggests that intellectual

and visual mastery of the tropics-through the creation of art and literature-accompanied material appropriations of land, labor, and natural resources. Tobin convincingly argues that depictions of tropical plants, gardens, and landscapes that circulated in the British imagination provide a key to understanding the forces that shaped the British Empire. Beth Fowkes Tobin is Professor of English at Arizona State University. She is the author of *Picturing Imperial Power: Colonial Subjects in Eighteenth-Century British Painting*.
