**Maximum Mini** Documeant Publishing  
This book focuses solely on the cars derived from the classic Mini. Small GTs, sports cars, roadsters and fun cars: Mini-derivatives that changed the specialist motoring market completely in the early sixties, and new designs kept it busy for nearly four decades. from the well known Mini Marcos and Unipower GT that raced at Le Mans, to the very obscure but as exciting Coldwell GT or Sarcon Scarab, almost 60 cars are thoroughly researched, described and photographed in this book.

A FIRST COURSE IN THE FINITE ELEMENT METHOD provides a simple, basic approach to the course material that can be understood by both undergraduate and graduate students without the usual prerequisites (i.e. structural analysis). The book is written primarily as a basic learning tool for the undergraduate student in civil and mechanical engineering whose main interest is in stress analysis and heat transfer. The text is geared toward those who want to apply the finite element method as a tool to solve practical physical problems. Important Notice: Media content referenced within the product

Initially, they were the waste product of wooden bowls turned in an ancient technique by Robin Wood of the United Kingdom, an expert pole-lathe turner and author. Known for his historical and functional objects made on a foot-powered lathe, Wood keeps the tradition of pole turning alive. The leg-powered process Wood uses results in thousands of solid, round chunks – Cores – that get broken out of the center of the bowl at the last moment. Wood donated 100 Cores, which ranged in size from 2 x 2" to 3 x 4" to The Center for Art in Wood in Philadelphia. The Center sent Cores to two-score artists who agreed to the challenge of reworking them into new pieces of art. These works, shown here in more than 240 color photos, formed the exhibition – Robin Wood's CORES Recycled – by The Center for Art in Wood.

This comprehensive book covers a wide range of key topics, from space and science to history and the natural world. Crammed with amazing facts and fantastic photographs, this Junior Encyclopedia provides children with a wealth of knowledge in an accessible format, while captions, annotation and special panels supply extra information. *Japanese Car* Juta and Company Ltd Air conditioning in vintage cars often falls into disrepair, as owners figure that it never really worked all that well when it was new, and assume that rejuvenation would be prohibitively expensive. In his new book, *Just Needs a Recharge: The Hack Mechanic Guide to Vintage Air Conditioning*, Rob Siegel details exactly what's needed to

resurrect long-dead air conditioning in a vintage car, or install a/c in a car that never had it. In a level of detail not found in any other automotive a/c book, Rob reveals what you need to know about flare and o-ring fittings, upgrading to a rotary-style compressor and a parallel-flow condenser, making or specifying custom hoses, and selecting refrigerant so that the a/c blows cold enough to be usable. Although the book draws from Rob's BMW experience (with specifics for the BMW 2002 and 3.0CS), and concentrates on vintage a/c systems (those that have flare fittings and originally contained R12), most of the information applies to any air conditioning system, foreign or domestic, vintage or modern. Written in Rob's entertaining Hack Mechanic narrative voice, and including 240 photographs and illustrations, the book covers theory, the choice of refrigerant (R12, R134a, other EPA-approved, non-EPA-approved), legality, tools for a/c work, fittings and sizes, the compressor, the evaporator assembly and expansion valve or orifice tube, the condenser and fan, the receiver/drier or accumulator, electrical connections and compressor cycling, connecting and using manifold gauges, the basic steps for a/c rejuvenation, from-scratch a/c retrofit, making and installing hoses, flushing the system, pressure-testing and leak detection, evacuating and charging the system troubleshooting, and other things that heat up the cabin.

**Hybrid and Electric Drive** Dark Horse Comics  
 She is a petite, innocent-looking young woman with fantasies of skinning and flaying human skin. He is a diagnosed schizophrenic who fantasises about committing cold-blooded murder. When

they meet, they will plan and execute one of the most horrific crimes ever documented in this country. In April 2011, the sleepy gold-mining town of Welkom was deeply shocked when the dismembered, decapitated body of Michael van Eck was discovered buried in a shallow grave on the outskirts of the local cemetery. Was this a muti murder, the work of a deranged madman or part of a satanic ritual? For the investigators and psychologists involved, the mystery only deepened when a seemingly unlikely arrest was made: a soft-spoken girl next door and her intelligent, devoted fiancé. Joining forces with some of the country's most specialised experts in the occult and psychopathy, Lieutenant Ogies Nel of the Welkom Detective Unit and her colleagues in the South African Police Service unravelled one of the most brutal psychologically motivated murders ever committed in South Africa's crime history. As they uncovered the evidence, they exposed a most heinous deed, alarmingly similar to the crimes committed by serial killer Ed Gein, who had a preference for flaying his victims' skin. Grave Murder is the chilling account of how appearances can be very deceptive - how those who might seem innocent and harmless on the outside may hide some dark, disturbing secrets that are just waiting to be revealed.
