The required equations and background reading to solve these problems is given on the momentum pages on the dynamics page. Problem # 1 A particle has a mass of 10 kg and a velocity of 5 m/s. What is the momentum of the particle? (Answer: 50 kg ... Momentum Problems - Real World Physics Problems And Solutions So therefore momentum = kg x m/s and SI unit for momentum is kg x m/s. Momentum must always have a direction and so the final answer must reflect the direction of the momentum or velocity. Example questions. 1. Find the momentum of a round stone weighing 12.05kg rolling down a hill at 8m/s. Formula - P= kg x m/s = 12.05kg x 8m/s Momentum Practice Problems - Includes answer key and tutorial Linear momentum - problems and solutions. 1. An object travels at a constant 10 m/s. Calculate the linear momentum of the object. Known: Mass (m) = 1 kg. Velocity (v) = 10 m/s. Wanted : linear momentum (p) Solution : Formula of the linear momentum : p = m v. p = linear momentum, m = mass, v = velocity. The linear momentum : p = m v = (1)(10) = 10 kg m/s 2 Linear momentum - problems and solutions | Solved Problems ... Problem 4: Jerome plays middle linebacker for South's varsity football team. In a game against cross-town rival North, he delivered a hit to North's 82-kg running back, changing his eastward velocity of 5.6 m/s into a westward velocity of 2.5 m/s. a. Determine the initial momentum of the running back. b. Determine the final momentum of the ... The Physics Classroom Website The SI unit of momentum is kg m/s. Formula for Momentum: Momentum = Mass x Velocity Here we will be using the formula above as well as the rule " Momentum before collision is equal to the momentum after collision " to solve problems involving momentum. Momentum Before Collision = Momentum After Collision  $M_1 \times U_1 + M_2 \times U_2 = M_1 \times V_1 + M_2 \times V_2$  Where: Momentum Problems with Solutions | Science Decoder momentum before collision:  $p_1 = m_1 |v_1| - m_2 |v_2|$ ,  $|v_2|$  the magnitude of object B. momentum after collision:  $p_2 = 0$  (they both stop hence velocities equal to 0 after collision). conservation of momentum:  $m_1 |v_1| - m_2 |v_2| = 0$  Solve for  $|v_2|$   $|v_2| = |v_1| (m_1 / m_2)$  Answer: B Linear Momentum Questions with Solutions Momentum Problem Set 2 Selected Answers Elastic Collision Problems 1. A toy truck, with mass 20.0 g, travels along a level tabletop at 0.50 m/s. A miniature car, with mass 5.00 g, speeds headlong toward the toy truck at 0.75 m/s. Immediately after the collision, the toy truck continues in its original direction at 0.10 m/s. What is the velocity of the miniature car? 0.85 m/s 2. momentum\_problems\_2\_answers.pdf - Momentum Problem Set 2 ... Momentum Problems - Answer

Key (CPO worksheet) Remember : I am much more interested in your work. I've provided the answers so you can make sure that your work is leading you in the right direction. 1. p = 70,000 kg m/s 2. p = 35,000 kg m/s 3. v = 2 m/s 4. m = 0.5 kg 5. p = 40,000 kg m/s ... Momentum Practice Problems Answers - Mr. Ballard's HS Science Let v be the velocity of the trolley (with the boy in it) , the momentum of the trolley is p = (35 + 70) v Conservation of momentum 350 = (35 + 70) v v = 350 / 105 = 3.3 m/s to the right. Example 2 A 35 Kg boy running at a velocity of 2 m/s to the right, jumps onto a trolley at rest of mass 70 Kg. Conservation of Momentum - Physics Problems with Solutions ... Impulse Momentum Exam1 and Problem Solutions 1. An object travels with a velocity 4m/s to the east. Then, its direction of motion and magnitude of velocity are changed. Picture given below shows the directions and magnitudes of velocities. Find the impulse given to this object. I = F.  $\Delta t = \Delta p = m \cdot \Delta v$ . Impulse Momentum Exam1 and Problem Solutions Problem #1 Two gliders are set in motion on an air track. A spring of force constant k is attached to the rear side of one glider. The first glider, of mass m 1, has velocity v 1, and the second glider, of mass m 2, moves more slowly, with velocity v 2, as in Figure 1. When m1 collides with the spring attached to Linear Momentum, Impulse and Collisions Problems and Solutions Parabolic motion, work and kinetic energy, linear momentum, linear and angular motion - problems and solutions. 1. A ball is thrown from the top of a building with an initial speed of 8 m/s at an angle of ... Transverse waves - problems and solutions. 1. The distance between the two troughs of the water surface waves is 20 m. Angular momentum - problems and solutions | Solved ... Impulse Momentum Exam2 and Problem Solutions. 1. Objects shown in the figure collide and stick and move together. Find final velocity objects. Using conservation of momentum law;  $m_1 \cdot v_1 + m_2 \cdot v_2 = (m_1 + m_2) \cdot v_{\text{final}}$ .  $3.8 + 4 \cdot 10 = 7 \cdot v_{\text{final}}$ .  $64 = 7 \cdot v_{\text{final}}$ . Impulse Momentum Exam2 and Problem Solutions problems: 1. Conservation of Momentum in all directions 2. Watching the Center of Mass Need to be able to do both - Pick easier method. Toy Rocket Problem Your friend fires a toy rocket into the air with an unknown velocity. You observe that at the peak of its trajectory it has Momentum, Impulse, and Collisions Conservation of angular momentum Problems and Solutions Problem #1 A ballet dancer has a moment of inertia of 4 kg.m 2 when his arms reach his body and 16 kg.m 2 when his arms are stretched. When the two arms are pressed against his body, the speed of the dancer's rotation is 12 rounds/s. Conservation of angular momentum Problems and Solutions Momentum is the product of mass and velocity, which makes the two quantities inversely proportional. Mass goes down when we replace the 1000 pound grizzly bear with a 250 pound man. To keep the momentum constant, the man will have to run faster - faster by an amount that is inversely proportional to the decrease in weight.
