## WOOD SHAYLEE

Prune Routledge

This book offers a comprehensive review of the most common infectious diseases that affect the nervous system. Written by international experts, it provides a guide to clinicians for accurately diagnosing and treating these challenging syndromes. Organized into six sections, the book presents didactic, up-to-date information on the following topics relating to central nervous system (CNS) infections: diagnosis and evaluation of the patient, bacterial, viral, fungal and mycobacterial infections, disorders of the spinal cord, and a myriad of miscellaneous infections. Chapters specifically reflect and look to resolve the common obstacles clinicians face in the field, such as having unknown

etiologies on the majority of CNS infections, insensitive and slow microbiological techniques, an increasing number of immunosuppressed individuals with atypical presentations and pathogens, and a lack of standardized diagnostic algorithms. A complex yet accessible addition to the Current Clinical Neurology Series, *Neurological Complications of Infectious Diseases* invaluablely examines a wide range of infections that have neurological complications and sequelae.  
*Global Lawyering Skills* Cypi Press  
 After the attack that ended her modeling career, Tess O'Neil wants only to feel safe. She thinks she's found a sanctuary on a Nevada ranch, where she can live in solitude. Too bad rancher Zach Nolan isn't getting the message. The single dad wants to lease her land, and he won't quit until she says yes. That means he's always around! Letting the cowboy with the see-

right-through-her baby blues into her life is too dangerous. Almost as dangerous as the wild hope and yearning Zach and his three daughters are awakening in Tess. She's already risked so much. Maybe it's time to take the biggest gamble of all on the one thing she never dreamed she'd find—a home.

 Pearson Education

When Ed and his three adult sons come together to celebrate Christmas, they enjoy cheerful trash-talking, pranks, and takeout Chinese. Then they confront a problem that even being a happy family can't solve: When identity matters, and privilege is problematic, what is the value of being a straight white man?

*Snatched Up to Heaven for Kids* Springer  
 Science & Business Media  
 Accelerated partial breast irradiation (APBI) is being rapidly introduced into the clinical management of early breast

cancer. APBI, in fact, encompasses a number of different techniques and approaches that include brachytherapy, intraoperative, and external beam techniques. There is currently no single source that describes these techniques and their clinical implementation. This text is a concise handbook designed to assist the clinician in the implementation of APBI. This includes a review of the principles that underlie APBI, a practical and detailed description of each technique for APBI, a review of current clinical results of APBI, and a review of the incidence and management of treatment related complications.

### **The Kamchatkan Volcanic Eruption Response Team (KVERT).** CABI

From bestselling author of Fermat's Last Theorem, a must-have for number lovers and Simpsons fans

### Invasive Species and Human Health Springer Nature

In the aftermath of the financial crisis, investors are searching for new opportunities and products to safeguard their investments for the future. Riding high on the wave of new financial opportunities are Alternative Alternatives (AA). However, there is a dearth of information on what Alternative Alternatives are, how they work, and how they can be profited from. The book defines what Alternative Alternatives are, based on research and the following hypothesis: If the source (origin) of the risk lies outside of the financial markets, then it should be insulated from the vagaries of those markets. The book identifies and examines such and other unique, idiosyncratic, and difficult to replicate sources of risk - assets and strategies. The recent credit and sovereign debt crisis have served to defend the hypothesis and have upheld the conclusion that alternative alternative assets and strategies offer a risk-return profile that is distinct to those offered by traditional and main stream hedge fund strategies. These strategies include timberland investing, insurance risk transfer, asset/loan based lending (aviation, shipping, trade, entertainment, litigation financing etc), collectables and extraction strategies such as volatility and behaviour finance. This book will be a one stop resource to the new investment class known globally as Alternative Alternatives (AA) and will provide a comprehensive but accessible introduction to these assets. It provides an in-depth analysis of the assets and strategies which will leave investors with everything they need to identify and allocate to the best AA for them. It reviews the asset on a standalone basis, providing

an explanation of the product, its characteristics, a SWOT analysis, and details its risk/reward drivers. The book also looks at how to integrate the asset within a portfolio - its peculiarities, the challenges and the constraints of each. Next, the book shows how Alternative Alternatives are used in the real world, how they are implemented, and the results that they have achieved. Finally, the book looks at the scope, scalability and prospects for each asset in the future.

### **The Geography of Wine** Rosenfeld Media

This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important libraries around the world), and other notations in the work. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. As a reproduction of a historical artifact, this work may contain missing or blurred pages, poor pictures, errant marks, etc. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

### *Peptides and Peptide-based Biomaterials and their Biomedical Applications* Springer

This book covers the nutritional and nutraceutical profiles of a wide range of popularly consumed vegetables and nuts. The first half of the book focuses on popular vegetables, and describes how higher vegetable consumption reduces the risk of diseases ranging from diabetes to osteoporosis, diseases of the gastrointestinal tract, cardiovascular diseases, autoimmune diseases and cancer. The book also includes an interesting section on the antioxidant potential of mushrooms. In turn, the second half discusses the nutritional value of various nuts. Nuts are nutrient-dense foods with complex matrices rich in unsaturated fats, high-quality protein, fiber, minerals, tocopherols, phytosterols and phenolics. The respective chapters illustrate how the consumption of nuts could ward off chronic diseases like hypertension, cancer, inflammation,

oxidative stress, high blood pressure, coronary heart disease etc. In order to effectively promote vegetable and nut consumption, it is necessary to know and understand the nutritional and nutraceutical profiles of vegetables & nuts. Given its scope, the book will be of interest to students, researchers, food scientists, olericulturists, dietitians and agricultural scientists alike. Those working in the vegetable and nut processing industries, horticultural departments and other agricultural departments will also find the comprehensive information relevant to their work.

**Essentials of Marketing** Springer Nature  
Proceedings of SPIE present the original research papers presented at SPIE conferences and other high-quality conferences in the broad-ranging fields of optics and photonics. These books provide prompt access to the latest innovations in research and technology in their respective fields. Proceedings of SPIE are among the most cited references in patent literature.

### **Finance and Economics Discussion Series** Wiley

NEW YORK TIMES BESTSELLER From Gabrielle Hamilton, bestselling author of *Blood, Bones & Butter*, comes her eagerly anticipated cookbook debut filled with signature recipes from her celebrated New York City restaurant Prune. NAMED ONE OF THE BEST BOOKS OF THE YEAR BY PUBLISHERS WEEKLY NAMED ONE OF THE BEST BOOKS OF THE SEASON BY Time • O: The Oprah Magazine • Bon Appétit • Eater  
A self-trained cook turned James Beard Award-winning chef, Gabrielle Hamilton opened Prune on New York's Lower East Side fifteen years ago to great acclaim and lines down the block, both of which continue today. A deeply personal and gracious restaurant, in both menu and philosophy, Prune uses the elements of home cooking and elevates them in unexpected ways. The result is delicious food that satisfies on many levels. Highly original in concept, execution, look, and feel, the Prune cookbook is an inspired replica of the restaurant's kitchen binders. It is written to Gabrielle's cooks in her distinctive voice, with as much instruction, encouragement, information, and scolding as you would find if you actually came to work at Prune as a line cook. The recipes have been tried, tasted, and tested dozens if not hundreds of times. Intended for the home cook as well as the kitchen professional, the instructions offer a range of signals for cooks—a head's up on when you have gone too far, things to watch out for that could trip you up, suggestions on how to traverse certain uncomfortable

parts of the journey to ultimately help get you to the final destination, an amazing dish. Complete with more than with more than 250 recipes and 250 color photographs, home cooks will find Prune's most requested recipes—Grilled Head-on Shrimp with Anchovy Butter, Bread Heels and Pan Drippings Salad, Tongue and Octopus with Salsa Verde and Mimosa'd Egg, Roasted Capon on Garlic Crouton, Prune's famous Bloody Mary (and all 10 variations). Plus, among other items, a chapter entitled "Garbage"—smart ways to repurpose foods that might have hit the garbage or stockpot in other restaurant kitchens but are turned into appetizing bites and notions at Prune. Featured here are the recipes, approach, philosophy, evolution, and nuances that make them distinctively Prune's. Unconventional and honest, in both tone and content, this book is a welcome expression of the cookbook as we know it. Praise for Prune "Fresh, fascinating . . . entirely pleasurable . . . Since 1999, when the chef Gabrielle Hamilton put Triscuits and canned sardines on the first menu of her East Village bistro, Prune, she has nonchalantly broken countless rules of the food world. The rule that a successful restaurant must breed an empire. The rule that chefs who happen to be women should unconditionally support one another. The rule that great chefs don't make great writers (with her memoir, *Blood, Bones & Butter*). And now, the rule that restaurant food has to be simplified and prettied up for home cooks in order to produce a useful, irresistible cookbook. . . . [Prune] is the closest thing to the bulging loose-leaf binder, stuck in a corner of almost every restaurant kitchen, ever to be printed and bound between cloth covers. (These happen to be a beautiful deep, dark magenta.)"—The New York Times "One of the most brilliantly minimalist cookbooks in recent memory . . . at once conveys the thrill of restaurant cooking and the wisdom of the author, while making for a charged reading experience."—Publishers Weekly (starred review)

*Human-Robot Interaction* Simon and Schuster

This book provides an accessible and comprehensive tutorial on the key enabling technologies for 5G and beyond, covering both the fundamentals and the state-of-the-art 5G standards. The book begins with a historical overview of the evolution of cellular technologies and addresses the questions on why 5G and what is 5G. Following this, six tutorial chapters describe the fundamental technology components for 5G and beyond. These include modern

advancements in channel coding, multiple access, massive multiple-input and multiple-output (MIMO), network densification, unmanned aerial vehicle enabled cellular networks, and 6G wireless systems. The second part of this book consists of five chapters that introduce the basics of 5G New Radio (NR) standards developed by 3GPP. These include 5G architecture, protocols, and physical layer aspects. The third part of this book provides an overview of the key 5G NR evolution directions. These directions include ultra-reliable low-latency communication (URLLC) enhancements, operation in unlicensed spectrum, positioning, integrated access and backhaul, air-to-ground communication, and non-terrestrial networks with satellite communication.

**Crossing Nevada** Springer Science & Business Media

Tang provides a coherent and systematic exploration of social evolution as a phenomenon and as a paradigm. He critically builds on existing discussions on social evolution, while drawing from a wide range of disciplines, including archaeology, evolutionary anthropology, sociology, economics, political science, the philosophy of social sciences, and evolutionary biology. Clarifying the relationship between biological evolution and social evolution, Tang lays bare the ontological and epistemological principles of the social evolutionary paradigm. He also presents operational principles and tools for deploying this paradigm to understand empirical puzzles about human society. This is a vital resource for students, practitioners, and philosophers of all social sciences.

*International Economics* John Wiley & Sons  
Interviewing is easy, right? Anyone can do it... but few do it well enough to unlock the benefits and insights that interviewing users and customers can yield. In this new and updated edition of the acclaimed classic *Interviewing Users*, Steve Portigal quickly and effectively dispels the myth that interviewing is trivial. He shows how research studies and logistics can be used to determine concrete goals for a business and takes the reader on a detailed journey into the specifics of interviewing techniques, best practices, fieldwork, documentation, and how to make sense of uncovered data. Then Steve takes the process even further—showing the methods and details behind asking questions—from the words themselves to the interviewer's actions and how they influence an interview. There is even a chapter on making sure that information gleaned from the research study is used

by the business in such a way to make it impactful and worthwhile. Oh, and for good measure he throws in information about Research Operations. But, hey, that's just the nuts and bolts of the book. The truly fun part is Steve's voice and how he portrays this information through amusing anecdotes about his career, fascinating examples from other practitioners, and tips and tricks that only the most experienced UX researchers, like Steve, could come up with. As a nod to the pandemic, he offers ideas for the best way to interview someone remotely, and he also discusses personal bias—how to identify and deal with it so that it doesn't affect interviews. Everyone will get something from this book. But beyond the requisite information, it's simply a good read. And if you want another good read with stories galore, pick up Steve's other book *Doorbells, Danger, and Dead Batteries*. "Quite simply the best book on when, why, and how you should conduct user interview studies." —Elizabeth F. Churchill, PhD, Senior Director, Google  
Who Should Read This Book? Anyone and everyone who is interested in finding out what makes their business tick, i.e., who their users are. Anyone and everyone who wants to learn how to interview and listen to people. Anyone and everyone, including CEOs, user researchers, designers, engineers, marketers, product managers, strategists, interviewers, and you.  
Takeaways User research is key for companies to include in their design and development process. The best way to do user research is through interviewing users and determining their needs. Interviewing can identify what could be designed or what is actually a problem. Teams who meet their users face-to-face will build better products. Field research takes a lot of preparation to be successful—and a solid plan in advance. There are critical techniques and frameworks for mapping human behavior. A good interviewer always puts their participants at ease. If you ask the right questions, you'll get the right answers. A smart interviewer checks their worldview at the door. To establish a rapport with your interviewee, listen and don't be judgmental. Research data is a combination of analysis and synthesis. The importance of research analysis must be continually highlighted and emphasized to the powers that be.

*Thoracic Surgery. The Surgical Treatment of Thoracic Disease* Random House  
Invasive alien plants and animals are known for their disruption of ecosystems and threat to biodiversity. This book highlights their major impact on human

health. This includes not only direct effects through contact with the species via bites, wounds and disease, but also indirect effects caused by changes induced in ecosystems by invasive species, such as more water hyacinth increasing mosquito levels and thereby the potential for malaria. Covering a wide range of case studies from different taxa (animals and plants), and giving an overview of the diverse impacts of invasive species on health in developed and developing countries, the book is a significant contribution that will help in prioritizing approaches to controlling invasive species and mitigating their health effects. It covers invasive plants, marine species, spiders and other arachnids, ticks and dust mites, insects, mosquitos and other diptera, freshwater species (invertebrates and fishes), amphibians and reptiles, birds and mammals. The broad spectrum of the analyzed case studies will ensure the appeal of the book to a wide public, including researchers of biological invasions, doctors, policy-makers and managers, and students of invasive species in ecology, animal and plant biology and public health medicine.

#### Innovative Product Design Practice

Harlequin

The White House and the World shows how modest changes in U.S. policies could greatly improve the lives of poor people in developing countries, thus fostering greater stability, security and prosperity globally and at home. Center for Global Development experts offer fresh perspectives and practical advice on trade policy, migration, foreign aid, climate change, and more. In an introductory essay, CGD President Nancy Birdsall explains why and how the next U.S. president must lead in the creation of a better, safer world.

#### **Invasive Alien Plants** CABI

Wine has been described as a window into places, cultures and times. Geographers have studied wine since the time of the early Greeks and Romans, when viticulturalists realized that the same grape grown in different geographic regions produced wine with differing olfactory and taste characteristics. This book, based on research presented to the Wine Specialty Group of the Association of American Geographers, shows just how far the relationship has come since the time of Bacchus and Dionysus. Geographers have technical input into the wine industry, with exciting new research tackling subjects such as the impact of climate change on grape production, to the use of remote sensing and Geographical Information Systems for

improving the quality of crops. This book explores the interdisciplinary connections and science behind world viticulture. Chapters cover a wide range of topics from the way in which landforms and soil affect wine production, to the climatic aberration of the Niagara wine industry, to the social and structural challenges in reshaping the South African wine industry after the fall of apartheid. The fundamentals are detailed too, with a comparative analysis of Bordeaux and Burgundy, and chapters on the geography of wine and the meaning of the term 'terroir'.

#### **5G and Beyond** Springer Science & Business Media

The five-volume set IFIP AICT 630, 631, 632, 633, and 634 constitutes the refereed proceedings of the International IFIP WG 5.7 Conference on Advances in Production Management Systems, APMS 2021, held in Nantes, France, in September 2021.\* The 378 papers presented were carefully reviewed and selected from 529 submissions. They discuss artificial intelligence techniques, decision aid and new and renewed paradigms for sustainable and resilient production systems at four-wall factory and value chain levels. The papers are organized in the following topical sections: Part I: artificial intelligence based optimization techniques for demand-driven manufacturing; hybrid approaches for production planning and scheduling; intelligent systems for manufacturing planning and control in the industry 4.0; learning and robust decision support systems for agile manufacturing environments; low-code and model-driven engineering for production system; meta-heuristics and optimization techniques for energy-oriented manufacturing systems; metaheuristics for production systems; modern analytics and new AI-based smart techniques for replenishment and production planning under uncertainty; system identification for manufacturing control applications; and the future of lean thinking and practice Part II: digital transformation of SME manufacturers: the crucial role of standard; digital transformations towards supply chain resiliency; engineering of smart-product-service-systems of the future; lean and Six Sigma in services healthcare; new trends and challenges in reconfigurable, flexible or agile production system; production management in food supply chains; and sustainability in production planning and lot-sizing Part III: autonomous robots in delivery logistics; digital transformation approaches in production management; finance-driven supply chain; gastronomic

service system design; modern scheduling and applications in industry 4.0; recent advances in sustainable manufacturing; regular session: green production and circularity concepts; regular session: improvement models and methods for green and innovative systems; regular session: supply chain and routing management; regular session: robotics and human aspects; regular session: classification and data management methods; smart supply chain and production in society 5.0 era; and supply chain risk management under coronavirus Part IV: AI for resilience in global supply chain networks in the context of pandemic disruptions; blockchain in the operations and supply chain management; data-based services as key enablers for smart products, manufacturing and assembly; data-driven methods for supply chain optimization; digital twins based on systems engineering and semantic modeling; digital twins in companies first developments and future challenges; human-centered artificial intelligence in smart manufacturing for the operator 4.0; operations management in engineer-to-order manufacturing; product and asset life cycle management for smart and sustainable manufacturing systems; robotics technologies for control, smart manufacturing and logistics; serious games analytics: improving games and learning support; smart and sustainable production and supply chains; smart methods and techniques for sustainable supply chain management; the new digital lean manufacturing paradigm; and the role of emerging technologies in disaster relief operations: lessons from COVID-19 Part V: data-driven platforms and applications in production and logistics: digital twins and AI for sustainability; regular session: new approaches for routing problem solving; regular session: improvement of design and operation of manufacturing systems; regular session: crossdock and transportation issues; regular session: maintenance improvement and lifecycle management; regular session: additive manufacturing and mass customization; regular session: frameworks and conceptual modelling for systems and services efficiency; regular session: optimization of production and transportation systems; regular session: optimization of supply chain agility and reconfigurability; regular session: advanced modelling approaches; regular session: simulation and optimization of systems performances; regular session: AI-based approaches for quality and performance improvement of production systems; and regular session: risk and

performance management of supply chains \*The conference was held online.  
*Straight White Men* Rosenfeld Media  
 Raised among doomsday preppers, Becca Aldaine's life has centered on planning for the worst, but when her escape plan is jeopardized, she turns to the boy she is expected to marry and hopes for the best.  
*Accelerated Partial Breast Irradiation* CGD Books  
 This series of books, which is published at the rate of about one per year, addresses fundamental problems in materials science. The contents cover a broad range of topics from small clusters of atoms to engineering materials and involve chemistry, physics, materials science, and engineering, with length scales ranging from Ångströms up to millimeters. The emphasis is on basic science rather than on applications. Each book focuses on a single area of current interest and brings together leading experts to give an up-to-date discussion of their work and the work of others. Each article contains enough references that the interested reader can

access the relevant literature. Thanks are given to the Center for Fundamental Materials Research at Michigan State University for supporting this series. M. F. Thorpe, Series Editor E-mail: thorpe@pa.msu.edu East Lansing, Michigan V  
 PREFACE It is hard to believe that not quite ten years ago, namely in 1991, nanotubes of carbon were discovered by Sumio Iijima in deposits on the electrodes of the same carbon arc apparatus that was used to produce fullerenes such as the "buckyball". Nanotubes of carbon or other materials, consisting of hollow cylinders that are only a few nanometers in diameter, yet up to millimeters long, are amazing structures that self-assemble under extreme conditions. Their quasi-one-dimensional character and virtual absence of atomic defects give rise to a plethora of unusual phenomena.  
Science and Application of Nanotubes  
 Springer Science & Business Media  
 Brassington and Pettitt's *Essentials of Marketing* is the indispensable introduction to the subject for all students taking a short or one-semester Marketing

module - whatever their background. The second edition retains the lively writing style and authority of the authors' *Principles of Marketing*, and highlights the links between theory and practice by using fresh and topical case studies drawn from real-life, whilst focussing on the most important concepts and theories of Marketing. *Essentials of Marketing* also boasts an unrivalled selection of online learning resources at [www.pearsoned.co.uk/brassington](http://www.pearsoned.co.uk/brassington), which includes multiple choice questions that test your learning and help monitor your progress, video interviews with top Marketing Managers, answering your questions on how they use the theories of marketing every day in their professional lives, a full online Glossary explaining the key terms of the subject, and weblinks for every chapter that help take your learning further! Dr Frances Brassington is Senior Lecturer in Retail Management and Marketing at Oxford Brookes University Dr Stephen Pettitt is Deputy Vice-chancellor of the University of Bedfordshire
