Whether the topic is understanding e-business, six sigma, workplace violence, knowledge workers, Internet job searches, or visionary leadership, Stephen Robbins and David DeCenzo cover it thoroughly and in a way that truly captures the issues facing managers in the twenty-first century. Its not enough just to know about managementyou have to possess the skills to match! With Robbins and DeCenzos new edition, youll learn so much about the real world of management, including: \*Why Amazon.com is revolutionizing the book-selling industry \*How SiloCaf, a coffee bean processing plant, uses sophisticated technologically-based controls to enhance productivity and ensure consistent quality in its work \*Why companies like London Fog are struggling to survive \*How teams at Hewlett-Packard redesigned a production process, cut waste, controlled costs, and increased productivity \*New techniques that can make a university more efficient and responsive to its students

Books in Print Supplement Taylor & Francis

This book is about complexity-driven, transdisciplinary approach to language study. It illustrates how complexity science can be applied in the research of language and society in order to create and sustain a transdisciplinary dialogue across interested communities of practice which may be beneficial in improving living conditions of real people.

*Becoming Nonviolent Peacemakers* Springer

Digital media histories are part of a global network, and South Asia is a key nexus in shaping the trajectory of digital media in the twenty-first century. Digital platforms like Facebook, WhatsApp, and others are deeply embedded in the daily lives of millions of people around the world, shaping how people engage with others as kin, as citizens, and as consumers. Moving away from Anglo-American and strictly national frameworks, the essays in this book explore the intersections of local, national, regional, and global forces that shape contemporary digital culture(s) in regions like South Asia: the rise of digital and mobile media technologies, the ongoing transformation of established media industries, and emergent forms of digital media practice and use that are reconfiguring sociocultural, political, and economic terrains across the Indian subcontinent. From massive state-driven digital identity projects and YouTube censorship to Tinder and dating culture, from Twitter and primetime television to Facebook and political rumors, *Global Digital Cultures* focuses on enduring concerns of representation, identity, and power while grappling with algorithmic curation and data-driven processes of production, circulation, and consumption.

*Theory, Policy, Practice* Oxford University Press

Surveys gender across a range of languages. For class use and as a reference resource for students and researchers in linguistics.

The Africa of today is different from that of yesterday. The Africa of today is witnessing a renaissance, one that is not merely going to change leaders and whitewash old structures. It is a renaissance that is seeing real changes taking place: meaningful political reforms, the building of democratic institutions, economic reforms, freedom of the press, etc. Such changes are spearheaded by new leadership in Africa. This new leadership has rekindled the spirits of Africans, awakening them to the new day at hand, an African Dawn. This book is about such a renaissance. It thus differs from other books that only paint a gloomy picture of Africa. It offers a balanced view, tracing where Africa came from, the colonial, post colonial to the present post-post colonial periods. Each period is critically analyzed and the legacies outlined. Based upon such analyses, it talks about the impending African Renaissance as a result of the reforms developed and implemented by post-post colonial African leadership. By outlining some of the challenges, the new leadership in Africa would face as they create their renaissance and offering solutions to some of these challenges, this book holds no illusions that the creation of the African Renaissance would be easy. The task of creating the African Renaissance should not be shouldered by the new leadership of Africa and Africans alone; the global community must play their part by creating a Global Constituency for Africa. Through such a constituency, the global community can contribute in many ways to help Africa realize its renaissance. The road ahead for Africa lies in unity: by uniting politically, economically and socially, a sustainable African Renaissance is assured. To attempt to go it alone on the part of individual African nations in this era of globalization is suicidal.

Political science has changed; the way students learn has changed; so too should the way it's taught. This is political science, today. *Political Science Today* by Wendy Whitman Cobb gives you a holistic view of the subfields that make up political science by dedicating one chapter to each of the topics at the core of the discipline. Unlike denser texts on the market, *Political Science Today* uses a field-based approach that allows you to engage with the material directly and dig into each of the discipline's diverse subfields while also developing critical thinking skills, discerning the differences between politics and political science, conducting and consuming research, and broadening your future career aspirations. The book's innovative table of contents begins with foundational tools like theories and research methods, then builds up to subfield chapters on Comparative Politics, International Relations, American Government, Political Economy, and Public Policy and Administration. Current case studies throughout the text provide a backdrop for engaging classroom discussions on topics such as President Trump's travel ban, ISIS as a state, and strengths and weaknesses of the United Nations. This unique approach provides short segments of topic coverage, plenty of summarizing content and review questions, as well as comprehensive learning objectives which will help you understand the realities of political science today.

**Paperbound Books in Print** Cambridge University Press

This book provides user studies and theories related to user-centered technology design processes for e-government projects. The book mainly discusses inherent issues of technology design

implications, user experiences, and guidelines for technology appropriation. Ethnographic studies focusing on real life examples will enable readers to understand the problems in an effective way. Furthermore, the theories and results will help researchers and practitioners to handle these challenges in an efficient way. E-Government is about harnessing the information revolution to improve the efficiency of government processes and the lives of citizens. It aims at a citizen centered approach to governance through effective use of the Internet and Information and Communication Technologies (ICTs). E-Government promotes transparency and effectiveness of a government's processes as well as citizens' participation (e-participation) in the affairs of the government. Whereas E-government projects are huge undertakings for government departments, a user-centric approach requires citizens' participation in the design and delivery of e government services. In both these respects, there are huge challenges and governments require long term commitment as well as correct planning and availability of financial resources to address them. System design for e-governmental applications is inherently a complex process. In successful e-government projects, appropriately designed technology infrastructure plays a pivotal role. The technology appropriation process requires that e-government technologies should be in line with the work practices of end users, so that successful usage of these technologies can be realized. E-governmental systems which fail to take into account such human factors result in failure and wasting huge amounts of public money as well as a loss of confidence of the public in such technological infrastructures. It is highly important that citizens are enabled to have access to the appropriate information technology, have knowledge and skills to use the available technology, and have the positive commitment to affect the governments' strategies. So, enabling citizens to effectively participate is much more difficult. This book addresses these inherent challenges and available opportunities with respect to user-centric e-government.

Wipf and Stock Publishers

This is a re-issue of Amalendu Guha's influential work on Assam and the Northeast, 30 years after its original publication, with a new introduction by the author. Guha's analysis extends from Assam in 1826, the year of the British annexation, to the post-independence conditions in 1950. The peculiar features of the region's plantation economy; the imperialism of opium cultivation; the problems of a steady influx of immigrants and the backlash of a local linguistic chauvinism; peasants' and workers' struggles; the evolution of the ryot sabhas, the Congress, trade unions and later of the Communist Party - such are the themes that have received attention in this book, alongside an analysis of legislative and administrative processes. The narrative is structured chronologically within an integrated Marxist framework of historical perspective, and is based on a wide range of primary sources.

**Choice** Morgan & Claypool Publishers

This book highlights critical challenges for business in a world where corporate responsibility has gone global.

**Political Science Today** Hackett Publishing

Behavioral finance presented in this book is the second-generation of behavioral finance. The first generation, starting in the early 1980s, largely accepted standard finance's notion of people's wants

as "rational" wants—restricted to the utilitarian benefits of high returns and low risk. That first generation commonly described people as "irrational"—succumbing to cognitive and emotional errors and misled on their way to their rational wants. The second generation describes people as normal. It begins by acknowledging the full range of people's normal wants and their benefits—utilitarian, expressive, and emotional—distinguishes normal wants from errors, and offers guidance on using shortcuts and avoiding errors on the way to satisfying normal wants. People's normal wants include financial security, nurturing children and families, gaining high social status, and staying true to values. People's normal wants, even more than their cognitive and emotional shortcuts and errors, underlie answers to important questions of finance, including saving and spending, portfolio construction, asset pricing, and market efficiency.

*Decision Making Under Uncertainty* Springer

This book explores the meanings and perceptions of development and the dialectics of theory, policy and practice. It looks at how theory translates into policy, and the disconnections in its design and implementation in the Indian context. The book focuses on the influence of capitalist globalisation, democratisation, decentralisation and neoliberal economic reforms on the development discourse in India and how these have challenged the traditional role of the 'state', the meaning of citizenship, and public participation. Through an analysis of case studies from various parts of the country, it bridges the gap between policy prescriptions and practices and unpacks the institutional, political and policy-led compulsions and incompatibilities which most often remain unreported. It also discusses the intersections between policymaking and the politics of class, caste and gender, and emphasises the role bureaucracy plays in institutional governance. The volume includes articles from professionals ranging from academics, practitioners and activists. It will be of interest to scholars and researchers of public policy, development studies, South Asian politics, and economics as well as policy makers and practitioners in government and civil society.

*pre-1940* MIT Press

This book is offered for consideration and critical reflection primarily by political science scholars throughout the world from beginning students to professors emeriti. Neither age nor erudition seems to make much difference in the prevailing assumption that killing is an inescapable part of the human condition that must be accepted in political theory and practice. It is hoped that readers will join in questioning this assumption and will contribute further stepping stones of thought and action toward a nonkilling global future.

*Challenges, Opportunities and Critical Interventions* CFA Institute Research Foundation

The only extant treatise on statecraft from classical India, the Arthashastra is an invaluable resource for understanding ancient South Asian political thought; it also provides a comprehensive and unparalleled panoramic view of Indian society during the period between the Maurya (320-185 BCE) and Gupta (320-497 CE) empires. This volume offers modern English translations of key selections, organized thematically, from the Arthashastra. A general Introduction briefly traces the arc of ancient South Asian history, explains the classical Indian tradition of statecraft, and discusses the origins and importance of the Arthashastra. Thorough explanatory essays and notes set each excerpt in its intellectual, political, and cultural contexts.

*African Renaissance* Center for Global Nonkilling

LLBA contains abstracts of the world's literature in linguistics and language-related research, book abstracts, book review listings, and enhanced bibliographic citations of relevant dissertations." Related disciplines such as anthropology, education, ethnology, information science, medicine, and communications are covered. Also includes some reference to papers in published conference proceedings.

Vermeersch and Kremer examine the effects of subsidized school meals on school participation, educational achievement, and school finance in a developing country setting. They use data from a program that was implemented in 25 randomly chosen preschools in a pool of 50. Children's school participation was 30 percent higher in the treatment group than in the comparison group. The meals program led to higher curriculum test scores, but only in schools where the teacher was relatively experienced prior to the program. The school meals displaced teaching time and led to larger class sizes. Despite improved incentives, teacher absenteeism remained at a high level of 30 percent. Treatment schools raised their fees, and comparison schools close to treatment schools decreased their fees. Some of the price effects are caused by a combination of capacity constraints and pupil transfers that would not happen if the school meals were ordered in all schools. The intention-to-treat estimator of the effect of the randomized program incorporates those price effects, and therefore it should be considered a lower bound on the effect of generalized school meals. This insight on price effects generalizes to other randomized program evaluations. This paper--a product of the Poverty Reduction and Economic Management 2, Africa Technical Families--is part of a larger effort in the region to increase our understanding of the impact of programs aimed at reaching the

Millennium Development Goals.

1970- issued in 2 vols.: v. 1, General reference, social sciences, history, economics, business; v. 2, Fine arts, humanities, science and engineering.

*Gender* Cambridge University Press

Sentiment analysis and opinion mining is the field of study that analyzes people's opinions, sentiments, evaluations, attitudes, and emotions from written language. It is one of the most active research areas in natural language processing and is also widely studied in data mining, Web mining, and text mining. In fact, this research has spread outside of computer science to the management sciences and social sciences due to its importance to business and society as a whole. The growing importance of sentiment analysis coincides with the growth of social media such as reviews, forum discussions, blogs, micro-blogs, Twitter, and social networks. For the first time in human history, we now have a huge volume of opinionated data recorded in digital form for analysis. Sentiment analysis systems are being applied in almost every business and social domain because opinions are central to almost all human activities and are key influencers of our behaviors. Our beliefs and perceptions of reality, and the choices we make, are largely conditioned on how others see and evaluate the world. For this reason, when we need to make a decision we often seek out the opinions of others. This is true not only for individuals but also for organizations. This book is a comprehensive introductory and survey text. It covers all important topics and the latest developments in the field with over 400 references. It is suitable for students, researchers and practitioners who are interested in social media analysis in general and sentiment analysis in particular. Lecturers can readily use it in class for courses on natural language processing, social media analysis, text mining, and data mining. Lecture slides are also available online. Table of Contents: Preface / Sentiment Analysis: A Fascinating Problem / The Problem of Sentiment Analysis / Document Sentiment Classification / Sentence Subjectivity and Sentiment Classification / Aspect-Based Sentiment Analysis / Sentiment Lexicon Generation / Opinion Summarization / Analysis of Comparative Opinions / Opinion Search and Retrieval / Opinion Spam Detection / Quality of Reviews / Concluding Remarks / Bibliography / Author Biography
