Intelligent Technologies Big Data, Artificial Intelligence, Machine

Learning, and Deep Learning have become the latest hot

buzzwords. They're behind image recognition for face filters,

speech recognition for Siri, and are set to be the magic behind

revolutionary new business and marketing applications. But

before we start thinking about business, we should understand

what each of these terms really means and how they differ. Blog:

The magic behind new tech: Big Data and AI | Fon Artificial

intelligence (AI) brings with it a promise of genuine human-to-

machine interaction. When machines become intelligent, they can

understand requests, connect data points and draw conclusions.

They can reason, observe and plan. Artificial intelligence, machine

learning, deep learning ...Artificial intelligence refers to the

simulation of a human brain function by machines. This is

achieved by creating an artificial neural network that can show

human intelligence. The primary human functions that an AI

machine performs include logical reasoning, learning and self-

correction.

How AI uses big data It's not as if storage and other issues with
