Determine a company's value, what drives it, and how to enhance value during a M&A Valuation for M&A lays out the steps for measuring and managing value creation in non-publicly traded entities, and helps investors, executives, and their advisors determine the optimum strategy to enhance both market value and strategic value and maximize return on investment. As a starting point in planning for a transaction, it is helpful to compute fair market value, which represents a "floor" value for the seller since it by definition represents a value agreed upon by any hypothetical willing and able buyer and seller. But for M&A, it is more important to compute investment value, which is the value of the target company to a strategic buyer (and which can vary with each prospective buyer). Prepare for the sale and acquisition of a firm Identify, quantify, and qualify the synergies that increase value to strategic buyers Get access to new chapters on fairness opinions and professional service firms Find a discussion of Roger Grabowski's writings on cost of capital, cross-border M&A, private cost of capital, intangible capital, and asset vs. stock transactions Inside, all the necessary tools you need to build and measure private company value is just a page away!

The future of politics after the pandemic COVID-19 exposed the pre-existing conditions of the

current global crisis. Many Western states failed to protect their populations, while others were able to suppress the virus only with sweeping social restrictions. In contrast, many Asian countries were able to make much more precise interventions. Everywhere, lockdown transformed everyday life, introducing an epidemiological view of society based on sensing, modeling, and filtering. What lessons are to be learned? The *Revenge of the Real* envisions a new positive biopolitics that recognizes that governance is literally a matter of life and death. We are grappling with multiple interconnected dilemmas—climate change, pandemics, the tensions between the individual and society—all of which have to be addressed on a planetary scale. Even when separated, we are still enmeshed. Can the world govern itself differently? What models and philosophies are needed? Bratton argues that instead of thinking of biotechnologies as something imposed on society, we must see them as essential to a politics of infrastructure, knowledge, and direct intervention. In this way, we can build a society based on a new rationality of inclusion, care, and prevention.
