TESSA HOBBS

Placement Learning in Medical Nursing CRC Press

Teaching nursing students in a clinical setting with patients differs greatly from teaching in a classroom. It can be a daunting task if one is not prepared and mentored. This book provides a concise and accessible guide for nursing instructors leading students in the healthcare agency for the first time, as well as experienced educators who are interested in exploring new teaching strategies. It covers many aspects of the clinical instructor role including: meeting the nurse manager organizing and documenting your clinical day creating clinical student assignments objectively evaluating student's individual performance acknowledging diversity and inclusiveness tracking progress and handling student errors In addition, the book discusses some of the more complex issues surrounding the role of the clinical instructor such as accountability for nursing care, documentation and medication administration carried out by students. The book features numerous forms and charts to assist in organizing and managing the teaching experience, as well as situational scenarios to help prepare instructors for unique situations that arise during the clinical experience. Written by authors with extensive experience in clinical care and teaching, this book will be an invaluable guide for all clinical nursing instructors, both novice and experienced. Examples of tools in the book and online downloadable forms to support an organized clinical experience for a new instructor accompany this publication.

How to Succeed in Nursing School + Bonus Learning Matters

A practical, entry-level text, *Communication for Nurses* offers direct, effective techniques delivered in a concise, user-friendly format that enables readers to develop a professional communication st *Developments in Nursing and Health Care 15* Independently Published

About: To prepare you for real world practice, this book will highlight content areas most relevant to the bedside and why they must be mastered and understood. To help visualize the professional development that is needed as you transition to the responsibilities of the professional nurse, I use the metaphor of building a house; not a static structure, but a unique, vibrant "living" house that is a reflection of how you choose to build and add to it over time. Nursing is a living and vibrant practice that requires your personal involvement and engagement to promote the well-being of those you care for. The components of this "living" home include: Foundation: A house must have a firm and stable foundation. The ethical comportment or the art of nursing is this foundation for every nurse. Caring behaviors, nurse engagement, and professionalism in practice must be present or your nursing practice could be on shaky ground before it even begins! Walls: The applied sciences of nursing: pharmacology, fluid and electrolytes, and anatomy and physiology. I contextualize these sciences to the bedside so the relevance of mastering this content becomes apparent. Roof: Critical thinking and clinical reasoning, which is the thinking that is required by the nurse that completes the house and ties everything together. Skeletons in the closet: Every house has closets and some have a few skeletons in them! Incivility and men in nursing will be explored in detail!

Bright Prospects for Active Schools Pearson

The result of Creative Health Care Management's 25 years experience in health care, this book provides health care leaders with basic concepts for transforming their care delivery system into one that is patient and family centered and built on the power of relationships. Relationship-Based Care provides a practical framework for addressing current challenges and is intended to benefit health care organizations in which commitment to care and service to patients is strong and focused. It will also prove useful in organizations searching for solutions to complex struggles with patient, staff and physician dissatisfaction; difficulty recruiting and retaining and developing talented staff members; conflicted work relationships and related quality issues. Now in it's 16th printing, Relationship-Based

Care has sold over 65,000 copies world-wide. It is the winner of the American Journal of Nursing Book of the Year Award.

What Research Tells Us About Whether, When and How Springer Publishing Company

At a time when more and more of what people learn both in formal courses and in everyday life is mediated by technology, Learning Online provides a much-needed guide to different forms and applications of online learning. This book describes how online learning is being used in both K-12 and higher education settings as well as in learning outside of school. Particular online learning technologies, such as MOOCs (massive open online courses), multi-player games, learning analytics, and adaptive online practice environments, are described in terms of design principles, implementation, and contexts of use. Learning Online synthesizes research findings on the effectiveness of different types of online learning, but a major message of the book is that student outcomes arise from the joint influence of implementation, context, and learner characteristics interacting with technology--not from technology alone. The book describes available research about how best to implement different forms of online learning for specific kinds of students, subject areas, and contexts. Building on available evidence regarding practices that make online and blended learning more effective in different contexts, Learning Online draws implications for institutional and state policies that would promote judicious uses of online learning and effective implementation models. This in-depth research work concludes with a call for an online learning implementation research agenda, combining education institutions and research partners in a collaborative effort to generate and share evidence on effective practices.

Communication for Nurses John Wiley & Sons

Nursing has come a long way since the days of Florence Nightingale. But a hospital run with the help of cadet nurses and student nurses learning on the wards where they practised. Starched uniforms with little caps. Nothing thrown away, everything re-sterilised and used again, it seems light years away from today's hospitals. Would you know how to set up a major accident procedure? Read about our first attempt at organising a major accident runthrough. If you want to wonder down the path of memory lane then this is the book for you.

Note Taking That Works! Springer

Self-Care for New and Student Nurses presents techniques to prepare you for stressors present now and those to come. No matter where you are in your nursing career, this book offers you multiple ways to prioritize your own mental, physical, and emotional health.

Designed to teach nurses about the development, motivational, and sociocultural differences that affect teaching and learning, this text combines theoretical and pragmatic content in a balanced, complete style. --from publisher description.

A guide for students in practice Jones & Bartlett Learning

cs.nurse.nursedu

Placement Learning in Medical Nursing,A guide for students in practice,1 McGraw-Hill Education (UK)

Take notes for critical thinking and clinical reasoning in every course, class, and clinical. Focus on prioritization in every subject to include fundamentals, medical surgical, mental health, pediatrics, and even community health. Nursing students will be able to focus on the nursing process every step of the way while ensuring that they are very comfortable with QSEN (quality and safety) and NCLEX competencies and standards. www.nursethink.com

Annual report and proceedings of the ... annual convention Routledge

First published in 1997, The nursing and health care fields are developing rapidly. This new series of monographs offers reports of projects completed in 1997 in the fields of nursing and health care.

The aim of the series is to report studies that have relevance to contemporary nursing and health

care practice. It will include reports of research into aspects of clinical nursing care, management and education. The series will be of interest to all nurses and health care workers, researchers, managers and educators in the field.

EBOOK: Transition to Nursing: Preparation for Practice John Wiley & Sons

Designated a Doody's Core Title and Essential Purchase! "Without question, this book should be on every nurse educator's bookshelf, or at least available through the library or nursing program office. Certainly, all graduate students studying to be nurse educators should have a copy." --Nursing Education Perspectives "This [third edition] is an invaluable resource for theoretical and practical application of evaluation and testing of clinical nursing students. Graduate students and veteran nurses preparing for their roles as nurse educators will want to add this book to their library." Score: 93, 4 stars --Doody's "This 3rd edition. . . has again given us philosophical, theoretical and social/ethical frameworks for understanding assessment and measurement, as well as fundamental knowledge to develop evaluation tools for individual students and academic programs." -Nancy F. Langston, PhD, RN, FAAN Dean and Professor Virginia Commonwealth University School of Nursing All teachers need to assess learning. But often, teachers are not well prepared to carry out the tasks related to evaluation and testing. This third edition of Evaluation and Testing in Nursing Education serves as an authoritative resource for teachers in nursing education programs and health care agencies. Graduate students preparing for their roles as nurse educators will also want to add this book to their collection. As an inspiring, award-winning title, this book presents a comprehensive list of all the tools required to measure students' classroom and clinical performance. The newly revised edition sets forth expanded coverage on essential concepts of evaluation, measurement, and testing in nursing education; quality standards of effective measurement instruments; how to write all types of test items and establish clinical performance parameters and benchmarks; and how to evaluate critical thinking in written assignments and clinical performance. Special features: The steps involved in test construction, with guidelines on how to develop test length, test difficulty, item formats, and scoring procedures Guidelines for assembling and administering a test, including design rules and suggestions for reproducing the test Strategies for writing multiple-choice and multiple-response items How to develop test items that prepare students for licensure and certification examinations Like its popular predecessors, this text offers a seamless blending of theoretical and practical insight on evaluation and testing in nursing education, thus serving as an invaluable resource for both educators and students.

Reforming Teaching and Teacher Education McGraw-Hill Education (UK)

Promoting and maintaining good mental, physical and behavioural health of individuals, communities and populations is a key role of the registered nurse. Understanding how to incorporate health promotion into clinical practice will be an important part of a nurse's undergraduate studies and something they will take with them into professional life. This book will help students to understand the underlying theory behind health promotion and the different considerations for working with individuals, families and diverse communities. It will also demonstrate the practical skills needed in order to promote health and well-being effectively upon entering the practice environment. Key features: Mapped to the new NMC standards of proficiency for registered nurses (2018) Case studies, activities and other learning features help students translate the theory to practice Focus on practical skills to help guide daily practice

Before, During and After Springer Publishing Company

Worried about your placement? Will you fit in? Will you have the right skills? What do you need to learn for practice assessments? This book will help you with all these concerns. It will tell you what to expect from the placement, what you can learn, how to link theory and practice, and how to make the most of your learning opportunities. A logical, step-by-step approach to preparing for a medical placement Helps make the most of learning opportunities Explains how to develop medical competencies, mapping specific cancer and palliative care exercises and activities to the NMC competencies Narratives from other students describe what the placement will really be like Honest discussion of the challenges of a medical placement to help avoid problems Advice on possible approaches to situations that may arise Focus on the essential evidence base of cancer and palliative care nursing, linking theory to practice Series features: A unique guide to getting the most from clinical placements What to expect before a placement What you can expect to learn on placement How to consolidate your experience and learning Clear links and examples with NMC proficiencies Guidance on what to use as evidence for portfolios Short case studies to link theory with practice Key points reminder boxes Worried about your next placement? Will you 'fit in'? Will you have the right skills? What do you need to learn to meet practice assessments? This series will help you with all these concerns. It will tell you what to expect from each placement, what you can learn, how to link theory and practice, and how to make the most of your learning opportunities. This is the only series specifically for student nurses undertaking specific practice placements, and will give you all the information you need in a user-friendly format. Each book in the series covers a specific area of practice for a typical placement on a pre-registration nursing course. Each title provides: A unique guide to getting the most from clinical placements How to prepare for your placement What you can expect to learn during a placement Clear links to, and examples of, achieving NMC competencies Guidance on what to use as evidence for your portfolio Case studies that link theory with practice How to consolidate your experience and learn from the placement Tips, activities, further reading suggestions and useful websites. Pearson Etext Skills in Clinical Nursing - Access Card Underland Press

What are the prerequisites for reforming education, and how can these reforms be seen in school development and culture? How should teacher education support this reform process? What are the principles and practices underlying the functioning of the schools of tomorrow? These questions are examined in this unique volume. The authors in this book argue that the central function of teacher education and education in general is to respond to the challenges brought on by the twenty-first century. According to this approach, the competencies and skills needed in the future are not merely a new addition to school activities, but rather something requiring a comprehensive reform of school culture encompassing teacher education, curricula, and teaching methods. Such a fundamental process of change in the action and thinking models used by schools would be an effort to achieve a complete transformation, the result of which would be schools developing into organizations that are both creative and imbued with a strong sense of community. A central attribute is that the creation of new knowledge is not just restricted to the classroom but also takes place in out-of-school environments. This would link learning to its natural context, eventually leading to an ideal instruction that is actively problem oriented, holistic, and life centered. This reform-minded volume is divided into three parts. The first part focuses on the reform processes in teacher education, the second on the reforms of pedagogics at schools and teacher education institutions, and the third on the processes of reculturing schools. New prospects for active schools in the United States and Europe, as well as in Japan and China, are discussed.

Caring for Patients, Caring for Student Nurses Lippincott Williams & Wilkins

This collection of true narratives reflects the dynamism and diversity of nurses, who provide the first vital line of patient care. Here, nurses remember their first "sticks," first births, and first deaths, and

reflect on what gets them through long, demanding shifts, and keeps them in the profession. The stories reveal many voices from nurses at different stages of their careers: One nurse-in-training longs to be trusted with more "important" procedures, while another questions her ability to care for nursing home residents. An efficient young emergency room nurse finds his life and career irrevocably changed by a car accident. A nurse practitioner wonders whether she has violated professional boundaries in her care for a homeless man with AIDS, and a home care case manager is the sole attendee at a funeral for one of her patients. What connects these stories is the passion and strength of the writers, who struggle against burnout and bureaucracy to serve their patients with skill, empathy, and strength.

EBOOK: The Student Nurse's Guide to Successful Reflection: Ten Essential Ingredients

Creative Health Care Management

How do you think like a staff nurse? What behaviour and level of work is needed to be awarded your degree? How will you adapt to working as a professional and working in a team? This book is for you if you're in the final stage of a pre-registration nursing course or if you are making the transition to becoming a registered nurse. It provides you with a toolkit of advice to help you deal with challenges you'll face and prepare you with an understanding of what the university and NMC will be looking for. Clear advice is given on the academic skills you will need, how to face the rigours of the final year, and what you need to demonstrate in your behaviour and placements. Professional issues covered include using evidence in practice, managing a caseload, and how far to fit into or question workplace culture. The features of this book include: • Guidance enriched by the latest research and expert knowledge of this transition period • Reflective learning boxes to help you identify how you can prepare • Case studies raising issues from student and registered nurses' experience going through this transition • Short chapters enable quick learning to support you now • Knowledge that will build your confidence and enhance your ability to fit into your first job This book is recommended reading for all final year nursing students and nurses new to the profession. "Packed with practical detail and the supporting evidence, it's obvious the authors are anchored in the reality of today's complex healthcare environments. The journey from student to registered nurse is more like a vertical ladder than a learning curve. This book helps you climb up every rung of the way. This book doesn't just describe the process of transition; it gives advice for both academic and practice based achievement, preparing you to think and practise as a staff nurse. It's a resource you can either dip into as needed, or read from cover to cover. In addition there's an evidence-based preceptorship toolkit for transition which is a useful tool for employers to devise an effective system of support. The experienced nurse would also benefit from this as a reference tool to support their students and preceptees and a reminder of the demands placed on them." Liz Allibone, Head of Clinical Education and Training, Royal Brompton and Harefield NHS Foundation Trust, London, UK, and Chair of UK Clinical Nurse Educator Network "The transition from student nurse to registered nurse is daunting, to say the least. The realisation of what accountability actually means and the implications of working within the NMC Code (2015) become a reality rather than the focus of an academic essay. This book Transition to Nursing: Preparation for Practice effectively prepares third-year student nurses for the reality of becoming a Registrant. The book offers useful and practical advice on how to make the most of your final year as a student nurse and how to achieve the highest degree classification possible. The book utilises case studies to encourage self-reflection, and consider how the NMC Code (2015) applies to the daily life of a Registrant. The book acknowledges the reality of working in modern day health care and the challenges that it brings - and offers practical advice on how to develop resilience, mindfulness and self-awareness. This book is a must for all final year students." Mike Parker, Senior Lecturer in Emergency and Unscheduled Care, University of York, UK "This interesting book takes the pre-registration nursing student on a journey from the beginning of their third year through to registration and working as a newly qualified nurse. The book is divided into three distinct sections, addressing academic aspects, the final clinical placement and lastly registration as a newly qualified nurse. It is written in an easy to read style using a case study approach with each chapter addressing a specific aspect thus allowing it to be read as a whole or dipped into as the need arises. The areas covered in each section are relevant to all fields of nursing and the case studies are realistic and encompass all aspects of the transition. This will be a very useful resource for third year students embarking on what is undoubtedly a stressful year as they strive to achieve success in their nursing degree and make the transition from student nurse to newly qualified nurse." Pauline Carson, Lecturer, Children and Young People's Nursing, Queens University Belfast, UK "Transition to Nursing: Preparation for Practice is an excellent text for all students embarking on the last stages of their journey to become a Registered Nurse. It offers great advice and guidance that will inform and help boost confidence, during the final year of the programme and beyond. The logical structure of the contents and use of case study scenarios allows the reader to develop their understanding of the important aspects of theory and practice requirements at Level 6, and the expectations and reality of life as a Newly Qualified Nurse. This is essential reading for all final year students." Claire Williams, Senior Lecturer, University of Derby, UK "Much has been written about transition to practice for newly qualified

nurses, Bill and Michelle have done a fantastic job in putting this in one place and producing a valuable resource for student nurses to help them prepare for this part of their journey to registered professional. They have covered all the important elements of transition including resilience, speaking out, developing confidence and dealing with reality shock culminating in a very handy toolkit that can be used to help manage this exciting and sometimes stressful time !!" Claire Agnew, Senior Nurse - Clinical Practice Development, University Hospitals of Leicester NHS Trust, UK
[EBOOK: Achieving Competencies for Nursing Practice: A Handbook for Student Nurses Sigma Theta Tau](#)

Self-Care for New and Student Nurses Sigma Theta Tau

[A Call for Radical Transformation](#) Elsevier Health Sciences

Quality patient care relies on the demonstration of competencies by nurses at all stages of their education and developing career. This exciting textbook is designed to help student nurses better understand the competencies set out by the NMC and equip them to achieve and demonstrate competency as they prepare to qualify as a nurse. The book is divided into sections that address the four domains of competency: Professional Values Communication and interpersonal skills Nursing practice and decision making Leadership, management and team working Suitable for all student nurses on pre-registration degree programmes in nursing across the UK, the book includes examples and insights from the fields of adult, child, mental health and learning disability that reflect a range of clinical and community settings. Amongst other topics this book covers: Communication skills

Working with patients and their families Solving problems in practice Clinical decision making Working in interprofessional teams Written by experts, each chapter challenges you to reflect on your own values and beliefs, giving you opportunities to learn and reflect on your nursing skills and knowledge. The chapters include reflective activities, portfolio activities, case studies & vignettes, key points and further resources. An essential purchase for all student nurses. Contributors: Mary Addo, Heather Bain, Debbie Banks, Mary Jane Baker, Owen Barr, Pauline Black, Jackie Bridges, Alison Brown, Jean Cowie, Debbie Good, Ruth Taylor, Kate Goodhand, Chris McLean, Yvonne Middlewick, Avril Milne, Eloise Monger, Delia Pogson, Mark Rawlinson, Beth Sepion, Steve Smith, Cathy Sullivan, Kay Townsend, Alison Trenery. "What we have in this textbook is a user friendly but rigorous presentation of the main competencies for professional nursing practice. Its easy style and 'readability' is one of its most pleasing features and the case studies, information boxes and key learning points give structure to the book as well as helping to engage readers. I recommend with enthusiasm this book to would-be readers. It is a solid and significant contribution to the on-going development of best nursing practice. It should be on the recommended reading list of any nurse who plans, delivers and evaluates patient care." Professor Hugh P. McKenna CBE, Pro Vice Chancellor, Research and Innovation, University of Ulster. "To date, I would consider this the 'must-have' book on achieving competence for any nursing student in all four countries of the United Kingdom." Melanie Jasper, Professor of Nursing and Head of the College of Human and Health Sciences, Swansea University, UK
