### **Morgan and Mikhail's Clinical Anesthesiology, 5th edition** Jones & Bartlett Publishers

There are relationships that exist between neuroanesthesia, neurosurgical procedures, individual patient pathology and the positioning of a patient for said procedure. A comprehensive examination of these relationships, their association with patient morbidity/mortality and how to approach these issues in an evidence-based manner has yet to become available. Positioning related injuries have been documented as major contributors to neurosurgical/neuroanesthesiology liability. This text examines these relationships. It provides considerations necessary to the correct positioning of a patient for a neurosurgical procedure for each individual patient and their individual pathology. In other words, this text will demonstrate how to construct the necessary surgical posture for the indicated neurosurgical procedure given the individual constraints of the patient within the environment of anesthesia and conforming to existing evidence-based practice guidelines. Sections will address physiological changes inherent in positioning in relation to anesthesia for neurosurgical procedures,

assessment of patient for planned procedure, as well as considerations for managing problems associated with these relationships. Additional sections will examine the relationship between neurosurgical positioning and medical malpractice and the biomechanical science between positioning devices and neurosurgical procedures. Neurosurgery and its patient population are in a constant state of change. Providing the necessary considerations for the neurosurgical procedure planned under the anesthesia conditions planned in the position planned, often in the absence of multicase study literary support, without incurring additional morbidity is the goal of this text.

This book provides an up-to-date introduction to the important and growing field of urban anthropology. This is an increasingly critical area of study, as more than half of the world's population now lives in cities and anthropological research is increasingly done in an urban context. Exploring contemporary anthropological approaches to the urban, the authors consider: How can we define urban anthropology? What are the main themes of twenty-first century urban anthropological research? What are the possible future directions in the field? The chapters cover topics such as urban mobilities, place-making and public space, production and consumption, politics and governance. These are illustrated by lively case studies drawn from a diverse range of urban settings in the global North and South. Accessible yet theoretically incisive, *Introducing Urban Anthropology* will be a valuable resource for anthropology students as well as of interest to those working in urban studies and related disciplines such as sociology and geography.
