Over the last century, medicine has come out of the black bag and emerged as one of the most dynamic and advanced fields of development in science and technology. Today, biomedical engineering plays a critical role in patient diagnosis, care, and rehabilitation. As such, the field encompasses a wide range of disciplines, from biology and physiology

Deep Stall applies a framework of strategic analysis to the Boeing Company. Boeing is the world's largest aerospace / defence company, with turnover in the region of US \$60bn. The book examines the relative decline of Boeing in the civil aircraft market in relation to European manufacturer, Airbus. The aim of the book is to utilize the concept of strategic value to explain Boeing's decline. The authors define this concept as investment in people and technology to leverage future market success by developing innovative new products, arguing that Boeing has neglected strategic value in favour of shareholder value, defined in terms of short-term cash benefits. The rationale for the book exists both in the fact that the story in itself is interesting and also in the wider framework of analysis concerning the correct strategic approach for running a high technology business. The argument illustrates what can happen when quarterly returns

become the predominant strategic rationale for a company. In the U.S. the business media (Economist, Forbes, Fortune, and Business Week etc) are now focusing on the question of Boeing's decline and the major implications for the U.S. national interest. Boeing is one of the jewels in the US technology crown, but today U.S. jobs and capability are being exported abroad, with most of its aircraft program work based in Asia. This is a hot topic in the US which explains why the business media are now so interested in this question. The book sits squarely in the centre of this debate. Deep Stall concludes with a brief analysis of the recent fight-back that has been evident in Boeing's fortunes and the successful campaign to sell the new 787. The authors probe the question of whether Airbus or Boeing is likely to dominate in the next ten or fifteen years.

The first edition of Handbook of Human Factors and Ergonomics in Health Care and Patient Safety took the medical and ergonomics communities by storm with in-depth coverage of human factors and ergonomics research, concepts, theories, models, methods, and interventions and how they can be applied in health care. Other books focus on particular human factors and ergonomics issues such as human error or design of medical devices or a specific application such as emergency medicine. This book draws on both areas to provide a compendium of human factors and ergonomics issues relevant to health care and patient safety. The second edition takes a more practical approach with coverage of methods, interventions, and applications and a greater range of domains such as medication safety, surgery, anesthesia, and infection prevention. New topics

include: work schedules error recovery telemedicine workflow analysis simulation health information technology development and design patient safety management Reflecting developments and advances in the five years since the first edition, the book explores medical technology and telemedicine and puts a special emphasis on the contributions of human factors and ergonomics to the improvement of patient safety and quality of care. In order to take patient safety to the next level, collaboration between human factors professionals and health care providers must occur. This book brings both groups closer to achieving that goal.

The purpose of this book is to review the basic science and clinical findings concerning maternal substance abuse and the developing nervous system of unborn children. The short-term but vitally significant repercussions of such exposure on biological development, with particular reference to the nervous system, are discussed. The book also discusses the profound influence of maternal substance abuse on behavior in adulthood, which is caused by subtle changes in the chemistry or structure of the developing nervous system. The subject will not only be of interest to clinical and basic science researchers and teachers in the field of maternal substance abuse, but also to individuals in psychology, social work, cellular and molecular biology, embryology, neuroscience, pharmacology, and in clinical professions such as pediatrics, neonatology, and obstetrics. The breadth of topics covered includes alcohol, cocaine, opiates, nicotine, benzodiazepines, marijuana, and the role of stress and hormones. Emphasis is placed on the relationship of the effects

of substance abuse on neurotrophic factors and receptors. Shows how abused substances act directly or indirectly to mimic or influence the action of neurotrophic factors Explains that the transient expression of peptides, neurotransmitters, and receptors can be markedly disturbed by drugs Demonstrates that animal and tissue culture studies are consistent with clinical observations and important in understanding and ameliorating adverse actions of drugs in early life

Differential psychology, or the psychology of individual differences as it is better known, is perhaps the single most important basic psychological science that underlies professional practice in psychology. The recent age of behaviorism all but ignored individual differences, but in this decade the study has emerged from relative dormancy with a new vitality, fueled by new concepts, technologies, statistics, and new viewpoints on old ideas that are moving us forward. This work is intended to be a review of as well as a primer on many of these advances and new approaches to the study of individual differences. The venerable, interesting, and often controversial Eysenck opens the volume with a review of recent results and new techniques for unlocking the physiological basis of what is commonly understood to be intelligence. Eysenck and his students, in his London laboratory, have been fostering advances in this field for more than four decades. Their latest work could be the most exciting of Eysenck's illustrious, scholarly career. Eysenck's eye-opening, innovative work on the relationship

between evoked potentials and performance on traditional psychometric measures, presented with a new slant, is certain to attract much attention in coming years. Eysenck and Barrett's chapter is followed by a closely related work by Arthur Jensen, who gives us a revitalizing look at the concepts of Sir Francis Galton, the founder of the psychology of individual differences.

The International Conference on Environmental Awareness for Sustainable Development (ICEASD) 2019 aims at discussing areas where problems and potential risks regarding environmental sustainability. Human Security factors play different roles in relationship to environmental sustainability and this conference will highlight the role of these factors. The conference hold in Kendari, Indonesia and it provide an opportunity for researchers to communicate how to highlight and bring attention to these issues such as in education through various interdisciplinary courses. This conference invites specialists in environmental issues, researchers, academicians, policy makers, innovators and practitioners from around the world to participate in ICEASD 2019. The International Conference on Challenges and Opportunities of Sustainable Environmental Development (ICCOSED) publish papers and special issues on specific topics of interest to international audiences of environmental researchers. This conference is held by Universitas Prof. Dr. Moestopo Beragama and Majelis Sinergi Kalam Ikatan Cendekiawan Muslim Se-Indonesia (MASIKA ICMI). The conference publishes original research from throughout the world dealing with education, Social sciences, and

environmental science. The editorial team makes every effort to cut the review and, when necessary, revision time periods as short as possible in order to help the research community publish and disseminate their works quickly. These efforts, however, depend heavily on authors' compliance with ethical rules and the journal's guidelines before submitting their works. Also, the voluntary reviewers from around the world with expertise in specific fields devote their precious time in order to provide quality feedback to authors. Yet, their time dedicated to improve the authors' articles is not unlimited. Often they appropriate from their personal times to do this voluntary work.
