Application Structure; Models, Views, and Controllers CodeIgniter4 User Guide — CodeIgniter4 4.0.0-rc.3 ... This package can access database using CodeIgniter database library. It provides the database access library like CodeIgniter 3 framework but without having to use that framework. Currently it supports MySQL, MySQLi, PostgreSQL, ODBC, Microsoft SQL Server, SQLite, OCI8 databases. The package can take an array of configuration options as parameter and initializes the main

database access class...PHP CodeIgniter Database Wrapper: Access database using ...CodeIgniter has a config file that lets you store your database connection values (username, password, database name, etc.). The config file is located at application/config/database.php. You can also set database connection values for specific environments by placing database.php in the respective environment config folder.

Database Configuration — CodeIgniter 3.1.11 documentation

Not all database drivers have a native way of getting the total number of rows for a result set. When this is the case, all of the data is prefetched and count() is manually called on the resulting array in order to achieve the same result.

Generating Query Results — CodeIgniter 3.1.11 documentation

If the above function does not contain any information in the first parameter it will connect to the default group specified in your database config file. For most people, this is the preferred method of use. A convenience method exists that is purely a wrapper around the above line and is provided for your convenience:

Connecting to your Database — CodeIgniter 4.0.0-rc.3 ...CodeIgniter has a config file that lets you store your database connection values (username, password, database name, etc.). The config file is located at app/Config/Database.php. You can also set database connection values in the .env file. See below for more details.

User_guide. This is your user guide to CodeIgniter. It is basically, the offline version of user guide on CodeIgniter website. Using this, one can learn the functions of various libraries, helpers and classes. It is recommended to go through this user guide before

building your first web app in CodeIgniter.

CodeIgniter - Quick Guide - Tutorialspoint

Entity classes are simple classes that represent a single instance of an object type, like a user, a blog post, job, etc. This class is responsible for maintaining the business logic surrounding the object itself, like formatting elements in a certain way, etc. They shouldn't have any idea about how they are saved to the database.
