Wat ooit begon als een Surinaams taalproject in Paramaribo in 1980 en later in Nederland werd voortgezet met steun van de stichting Wetenschappelijk Onderzoek van de Tropen (WOTRO), kreeg na twintig jaar zijn beslag in dit woordenboek van het Surinaams-Javaans. Het legt voor de sprekers van deze variant van het Javaans voor het eerst hun taal vast; een taal die een geheel eigen ontwikkeling heeft doorgemaakt.

In fiscal year 2009, the Department of Veterans Affairs (VA) provided more than 59 million prosthetic items to more than 2 million veterans. After VA physicians and other clinicians prescribe prosthetic items, VA's Prosthetic and Sensory Aids Service (PSAS) is responsible for processing prescriptions and providing prosthetic items to veterans. PSAS is also responsible for managing VA's spending for prosthetic items, more than \$1.6 billion in fiscal year 2009. In fiscal year 2008, this spending exceeded VA's budget estimates. Each year, VA makes an initial funding allocation for prosthetic items, and may reallocate by increasing or decreasing the funding available for prosthetic items during the fiscal year. GAO was asked to examine (1) how, for fiscal years 2005 through 2009, VA's spending for prosthetic items compared to budget estimates, and the extent to which VA reallocated funding for prosthetic items; (2) how PSAS monitors its performance in processing and providing prosthetic items to veterans; and (3) the efforts VA has undertaken to improve PSAS's performance. GAO reviewed VA's spending and funding allocation data for fiscal years 2005 through 2009. GAO also reviewed documents and interviewed VA officials at headquarters, 5 of VA's 21 regional health care networks, called VISNs, and 13 VA medical centers (VAMC).

This book provides different concepts, theories, and methods to better understand the relationship between performance and happiness in the context of work in this information and technology era. Various domains of performance management are covered in the context of management and information technology, including topics related to the performance of digital wallets from the customer's point of view; evaluating the sustainability of micro-finance institutions; challenges in employee retention; problems the workforce faces in IT and management; dimensions of happiness for women in the workplace; the role of happiness in building a meaningful life; and the quality of work life. The findings are useful for practical applications in management and business scenarios. They also provide informative insights for researchers, academicians, industry professionals, and scholars.

Using a structured consensus process, RAND worked with health plans to identify the specific issues of concern to them regarding the usability of CAHPS results for quality-improvement actions. Results of interviews with health plans confirmed their desire to have supplemental items available that they could use to collect more action-oriented data for quality improvement. In response to this issue, priority domains—coordination of care, access to care, information and materials, and customer service—and topic areas for item development were identified, and items for those areas were developed and field-tested.

Happiness and Keeping Pace with Technology

People sometimes remember events that never happened. These illusory or false memories have important practical implications in various aspects of everyday life, and also have significant theoretical implications for cognitive and neuropsychological models of memory. Cognitive psychologists and neuropsychologists have long been aware of false recognition, confabulation, and related kinds of memory distortions, but during the past several years research on these topics has increased rapidly. In recognition of this emerging domain of interest, this special issue of *Cognitive Neuropsychology* is devoted to the cognitive neuropsychology of false memories. Edited by Daniel L. Schacter, the special issue features experimental and theoretical contributions from leading cognitive psychologists, neuropsychologists, and neurologists that explore such issues as false recognition after frontal lobe damage, the nature of confabulation, amnesia and false memories, physiological correlates of memory illusions, memory distortions in normal and abnormal aging, and computational models of true and false memories. gical correlates of memory illusions, memory distortions in normal and abnormal aging, and computational models of true and false memories.

The larger part of the present volume is about Slavic historical linguistics while the second part is about more general issues and methodological aspects. The initial chapters contain a revision of the author's Slavic Accentuation and a discussion of the Slovene evidence for the Late Proto-Slavic accentual system and of the Kiev Leaflets. These are complemented by an extensive review of Garde's theory and an introductory article about the work of earlier authors for those who are unfamiliar with the subject. Then follows a discussion of changes in the vowel system, Bulgarian developments, final syllables in Slavic, early changes in the consonant system, and of Halle and Kiparsky's review of Garde's book. This results in a relative chronology of 70 stages from Proto-Indo-European to Slavic. The following chapters deal with the progressive palatalization, the accentuation of West and South Slavic languages, various aspects of the Old Slovene manuscripts, the chronology of nominal paradigms, and other issues under discussion in recent publications. The second part of the present volume contains a number of case studies exemplifying specific theoretical problems, most of them of a semantic nature. The synchronic studies deal with Russian and Japanese syntax and semantics, the diachronic studies with tonogenesis in different languages and with semantic reconstruction in Altaic and Chinese.
