This volume comprises of chapters that deal with language proficiency relating to a wide range of language program issues including curriculum, assessment, learners and instructors, and skill development. The chapters cover various aspects of a broad-based proficiency initiative, focusing on numerous aspects of foreign language learning, including how skills develop, how assessments can

inform curriculum, how learners and instructors view proficiency and proficiency assessment, and how individual use of technology furthers language learning. The concluding chapter points the way forward for issues and questions that need to be addressed.

For decades, bilingualism has resisted definition. If bilingualism is defined as habitual, fluent, correct and accent-free use of two languages, few individuals would qualify as bilinguals. A more viable approach may be to concede that 'bilingual' can be seen instead as a range of points on a continuum that allows

for differences. The psychological study of bilingualism encompasses a wide range of phenomena including the organization and representation of the grammar, the perception and production of language mixing, cerebral lateralization of language functions, and patterns of recovery of aphasic patients. This book collects together an international array of researchers in experimental psychology, linguistics and neuropsychology, who bring their expertise to bear on the critical issues that are raised by the bilingual phenomena. With the widespread interest in digital entertainment and the advances in the technologies of

computer graphics, multimedia and virtual reality technologies, the new area of “Edutainment” has been accepted as a union of education and computer entertainment. Edutainment is recognized as an effective way of learning through a medium, such as a computer, software, games or AR/VR applications, that both educates and entertains. The Edutainment conference series was established and followed as a special event for the new interests in e-learning and digital entertainment. The main purpose of Edutainment conferences is the discussion, presentation, and

information exchange of scientific and technological developments in the new community. The Edutainment conference series is a very interesting opportunity for researchers, engineers, and graduate students who wish to communicate at these international annual events. The conference series includes plenary invited talks, workshops, tutorials, paper presentation tracks, and panel discussions. The Edutainment conference series was initiated in Hangzhou, China in 2006. Following the success of the first (Edutainment 2006 in Hangzhou, China), the second (Edutainment 2007 in Hong Kong, China), and the third

events (Edutainment 2008 in Nanjing, China), Edutainment 2009 was held August 9–11, 2009 in Banff, Canada. This year, we received 116 submissions from 25 different countries and regions - cluding Austria, Canada, China, Denmark, Finland, France, Germany, Greece, Hong Kong, Italy, Japan, Korea, Malaysia, Mexico, The Netherlands, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, Taiwan, Trinidad and Tobago, UK, and USA.

Global English Pronunciation Instruction: Research-based insights presents recent research on L2 English pronunciation including pedagogical

implications and applications, and seeks to bridge the gulf between pronunciation research and teaching practice. The volume's 15 chapters cover a range of aspects that are central to pronunciation teaching, including the teaching of different segmental and suprasegmental features, teachers' and learners' views and practices, types and sources of learners' errors, feedback and assessment, tools and strategies for pronunciation instruction, reactions towards accented speech, as well as the connection between research and teaching. Chapters offer a fully developed section on pedagogical implications with insightful suggestions

for classroom instruction. This format and the variety of topics will be informative for researchers, language teachers, and students interested in English pronunciation, as it explores the diverse challenges learners of different L1 backgrounds face, and also provides research-informed techniques and recommendations on how to cope with them.

This book explores how learners' personalities influence foreign language learning in Japan. In particular, this volume investigates three main research questions: What are the learning strategies generally employed by

Japanese college students? What are the characteristic learning strategies of extroverts and introverts? Do extroversion and introversion have an impact on English listening proficiency? In the analysis carried out in the volume, both quantitative and qualitative research methods have been used. As regards the former, various types of questionnaires have been employed, measuring strategy use, personality characteristics, and English proficiency. As regards the latter, the strategies students use both in the classroom and in a tutorial learning situation have been observed, integrated with interviews with the students themselves regarding their use of

learning strategies. In the last part of the book, the pedagogical implications of this study are examined with suggestions for both teachers and learners.

An Investigation Into the Comparability of Two Tests of English as a Foreign Language

Taylor & Francis

Cloze procedure is a family of testing and teaching methods that leave blanks in discourse and ask examinees to restore the missing elements. Edited and coauthored by award-winning scholars, *Cloze and Coherence* shows how and why cloze procedure is sensitive to discourse constraints, and it offers a comprehensive theory of semiotics showing what coherence is and

reviewing a great deal of cloze research. It traces in particular the history of cloze research pertaining to studies of coherence from Hermann Ebbinghaus in the 1890s to Wilson L. Taylor in the 1950s until today. The research presented here aims to show that cloze scores tend to fall if discourse constraints are disrupted. Also explored are many subtle questions associated with this tendency. Populations discussed include native and nonnative speakers of English, native and nonnative speakers of French, and certain special populations such as deaf subjects and educable mentally retarded subjects. Contrary to some experts, it appears

from the theory and the research that all of the normal subject populations as well as the special populations examined here benefit from the cognitive momentum gained from the episodic organization of ordinary discourse. This finding is sustained by research from Taylor, Oller et al., Cziko, Bachman, Jonz, and Taira. Further, some of Jonz's recent work shows why scrambling encyclopedic text (Timothy Shanahan and colleagues) failed to produce any significant decrement in cloze scores. Jonz demonstrated empirically that some texts (just as Gary A. Cziko had predicted) are not made more difficult by scrambling their sentences

because the sentences of those texts are, in some cases, arranged in the manner of a list rather than a logically or chronologically structured series. Scrambling the list, therefore, has no significant impact. The final chapter of this study gives a comprehensive review of research reportedly showing that cloze is not sensitive to coherence. The authors show that all those efforts suffer from fatal flaws. Cloze and Coherence offers advances of two kinds. First, a better theoretical basis for experimental research on discourse comprehension and on literacy and language acquisition is presented, which stems from a fleshed-out semiotic theory.

Second, experimental advances, whose results are published here for the first time, appear in various studies by Jonz, Chihara et al., Oller et al., and Taira. This work is well researched and illustrated. It includes figures, tables, appendices, a glossary, and an index. It will be a valuable tool for language and literacy testers and teachers.

This book documents a major study comparing the Cambridge First Certificate in English (FCE) with the Test of English as a Foreign Language (TOEFL) to investigate similarities in test content, candidature and use.

While both tests were designed to measure many of the same abilities, they represent radically different approaches to language test development, reflecting deeper differences between educational measurement traditions in the US and UK. The thorough investigation of the fundamental characteristics and operational utility of two of the most widely used English tests for foreign students makes this study a valuable contribution to language testing research. As such, it will be of considerable interest to language testing specialists and examination boards, as well as to academic researchers and graduate students in

the field of language assessment more generally.

Assessments for Young Learners provides both theoretical and empirical information about assessing the English language proficiency of young learners. Using large-scale standardized English language proficiency assessments

developed for international or U.S. contexts as concrete examples, this volume illustrates rigorous processes of developing and validating assessments with considerations of young learners' unique characteristics. In this volume, young learners are defined as school-age children from approximately 5 to 13 years old, learning English as a foreign language (EFL) or a second language (ESL). This volume also discusses innovative ways to assess young learners' English language abilities based on empirical studies, with each chapter offering stimulating ideas for future research and development work to improve English language assessment

practices with young learners. English Language Proficiency Assessments for Young Learners is a useful resource for students, test developers, educators, and researchers in the area of language testing and assessment.

Wu's book provides an innovative perspective on, and recommendations for, the major aspects of second language (L2) teaching from a Hegelian anthropological

perspective. Language is social in nature and is related to the larger social milieu. Hegelian philosophy of language complements existing research and theories on L2 learning by not only equipping them with a systematic framework but also broadening their scope. In Hegelian philosophy, language not only has its individual and interpersonal dimensions but is also related to the community, society, and morality. The Hegelian perspective also suggests a number of functions of L2 which have either been neglected or rejected by L2 researchers. This book highlights these neglected elements such as intersubjectivity,

mutual recognition, universalization and objectivization of inner subjectivity of individuals, as well as moral enhancement. These concepts generate insights on the teaching and learning of L2. Wu's volume also covers how the Hegelian anthro-philosophical perspective can help to re-interpret research results on L2 learner characteristics that are related to L2 learning to date such as L2 identity and autonomy. The book offers an alternative research paradigm, teaching philosophy, pedagogical implications, and suggestions for scholars, practitioners, and students in the professional field of L2 teaching.

Adaptive hypermedia listening software enables materials writers to combine and deliver a wide range of digital elements on the same digital computer platform more efficiently. Such a combination and delivery provides a multidimensional, multi-sensory digital environment in which rich, efficient, instant, comprehensible, optimum, and meaningful input and feedback can be presented effectively and efficiently. Moreover, language learners' attention can be drawn to forms and meanings in input. Such aspects correspond with different theories and hypotheses of language learning and

teaching. This presents users/learners with an environment that is easy to use, tension-free, and optimal during self-study. However, to be able to design and develop cost effective and professional adaptive hypermedia listening software, there are certain scientific educational findings and implications that need to be implemented at every single stage. To have access to such vital findings is not so easy, and research must address this area. Design Solutions for Adaptive Hypermedia Listening Software explores how to design and create technically and pedagogically sound and efficient interactive adaptive hypermedia listening software for language

learners in any language. The chapters will cover learner strategy tools, the effectiveness of this technology, best practices in adaptive hypermedia listening software, and the benefits and challenges of this technology for language learning. It is ideal for companies, institutions, teachers, policymakers, academicians, researchers, advanced-level students, technology developers, and decision-making pertinent government officials interested in designing and developing multimedia listening environments for language learners.
