**Mayes' Midwifery E-Book** Oxford University Press  
 The Pre-hospital Obstetric Emergency Training (POET) programme provides an introduction to the obstetric patient and the anatomical and physiological changes that occur during pregnancy (including interpretation of patient-held records and rapid assessment of the obstetric patient). It includes clear definitions and describes risk factors, diagnosis and pre-hospital management of significant problems that occur in both early and late pregnancy and the immediate postnatal period. These are all situations that the pre-hospital practitioner may attend. This text and the accompanying integrated on-line and 'hands on' course will help practitioners identify and manage a range of time-critical obstetric emergencies specifically in the pre-hospital setting, and provides a structured examination and assessment technique as an aid to determining what treatments should be provided before transport, as well as when and how urgently transport should be initiated. POET is of relevance to paramedics, ambulance staff, doctors, and nurses working in the emergency pre-hospital setting and to midwives facilitating home births. It will also be of considerable value to medical and nursing practitioners working in Emergency Departments and unscheduled care settings where immediate access to skilled obstetric assistance is not available.

A fun and informative approach to learning, this book brings together a range of case studies from within pre-hospital care covering various conditions and situations which you may face working in an ambulance setting. Paramedic Case Studies will guide you through a number of detailed and descriptive scenarios, putting you at the centre of the action, each accompanied by full-colour illustrations to help set the scene and aid your understanding. Readers are encouraged to think critically through 'what would you do next?' questions, highlighting appropriate actions for each situation and how to achieve the best outcomes for your patient. Originally published as monthly instalments in Standby CPD, each case study has been brought up to date with the latest guidance and research. It also features brand new content, not published anywhere else before. Evidence-based throughout, each chapter provides up-to-date discussions on treatment and management as well as in-depth information on anatomy, physiology and pathophysiology. Topics include: Airway and breathing Circulation Disability Exposure Medical emergencies Trauma Obstetrics and gynaecology Paediatrics Mental health Older people This unique book is an essential resource for anyone working in the ambulance service who wants to test their knowledge of current and frequently encountered areas of paramedic practice, as well as those who are not yet qualified.

Postpartum haemorrhage is excessive bleeding after childbirth. The most common cause is the separation of the placenta from the uterus, but other causes include cervical lacerations, a large episiotomy or a ruptured uterus. Part of the World Clinics: Obstetrics & Gynecology series, this new volume is a comprehensive guide to postpartum haemorrhage. Beginning with a list of useful abbreviations, the book covers both primary and secondary causes of the condition, describing both surgical and non-surgical management techniques. With contributions from many UK-based specialists, this manual includes WHO (World Health Organisation) and FIGO (International Federation of Gynecology and Obstetrics) protocols and recommendations. Key points New volume in World Clinics: Obstetrics & Gynecology series Covers surgical and non-surgical treatment of primary and secondary causes of postpartum haemorrhage Includes WHO and FIGO protocols and recommendations Many UK-based contributors

This new book provides evidence based guidelines for the immediate clinical management of major trauma. It has been written by clinicians with many years of trauma experience, and endorsed as authoritative by Trauma Care (UK). The UK now has highly effective trauma systems. Clinical developments include the introduction of damage control resuscitation, tranexamic acid, blood product resuscitation, novel hybrid resuscitation and an emphasis on the control of major external haemorrhage as part of a new ABCDE approach. Consequently, more individuals with major trauma are surviving than ever before. Optimal pre-hospital care is essential for improved survival rates and reduced morbidity.

Basic Life Support (BLS) Provider Manual - The content in this handbook is in compliance with the 2020 guidelines for CPR and ECC (Emergency Cardiac Care), recently released by the American Heart Association - therefore, all the protocols illustrated in this book are based on up-to-date evidence. These guidelines are updated every 5 years. The BLS Provider Manual is a complete guide and reference tool that covers all the information students need to know in order to successfully complete the BLS course. For easier learning, multiple-choice questions can be found at the end of each chapter. The answers to these exercises are found at the very end of the book. Basic Life Support (BLS) refers to a set of procedures that can be learned to prolong survival in life-threatening situations until more professional help is available. Any individual can become certified in basic life support protocols. These protocols are frequently updated, based on the latest evidence available, and every individual who undergoes BLS certification may need to refresh their knowledge every two years. Medical professionals usually have a sound understanding of basic life support protocols. Even then, it is essential for them to frequently undergo certifications to update their knowledge regarding the latest evidence-based protocols. This handbook is designed for both medical professionals and non-healthcare individuals. It aims to establish a sound understanding of the mechanisms underlying basic life support. The intended audience is healthcare students and personnel who need to learn how to perform CPR and other basic cardiovascular life support skills in a wide variety of both clinical and pre-hospital settings. Retrieval Medicine is a core, concise and practical text covering the complex clinical and logistical problems experienced in the retrieval environment. Focusing on evidence-based management and clear clinical guidance, this easily portable handbook provides a comprehensive and accessible guide to this growing field for all health professionals involved in the retrieval and transfer of critically ill patients. Covering the practice of acute, emergency and critical care medicine in the transport environment, this handbook provides the practical guidance and clinical knowledge to enable medical practitioners to function independently in highly variable and resource limited environments with acutely unwell, unstable and often clinically undifferentiated patients over long durations. Closely mapped to the Royal College of Surgeons syllabus on retrieval and transfer medicine, this title comprehensively covers all aspects of retrieval medicine, from basic flight physiology to more complex retrievals and common pitfalls. Authored by an authoritative, international team of expert editors and specialist authors, this clinically focused text is complemented by a range of checklists and reference tools for practical and accessible use in the field. These deliver core information for use in the primary retrieval setting, allowing the retrievalist to structure their approach to a crisis and correct the problem with suggested interventions. Topics include retrieval systems and coordination, crisis resource management, shock, and a range of chapters focusing on responding to specific areas of medicine when encountered in the retrieval environment, such as cardiology and obstetrics and gynaecology.
