Drug Doses ILRI (aka ILCA and ILRAD)
This open access book draws the big picture of how population change interplays with politics across the world from 1990 to 2040. Leading social scientists from a wide range of disciplines discuss, for the first time, all major political and policy aspects of population change as they play out differently in each major world region: North and South America; Sub-Saharan Africa and the MENA region; Western

and East Central Europe; Russia, Belarus and Ukraine; East Asia; Southeast Asia; subcontinental India, Pakistan and Bangladesh; Australia and New Zealand. These macro-regional analyses are completed by cross-cutting global analyses of migration, religion and poverty, and age profiles and intra-state conflicts. From all angles, this book shows how strongly contextualized the political management and the political consequences of population change are. While long-term population ageing and short-term migration fluctuations present structural conditions, political actors play a key role in (mis-)managing,

manipulating, and (under-)planning population change, which in turn determines how citizens in different groups react.

Lines of Control Oxford University Press

Due to the fast growth of the Web and the difficulties in finding desired information, efficient and effective information retrieval systems have become more important than ever, and the search engine has become an essential tool for many people. The ranker, a central component in every search engine, is responsible for the matching between processed queries and indexed documents. Because of its central role, great attention has been paid to the research and development of ranking technologies. In addition,

ranking is also pivotal for many other information retrieval applications, such as collaborative filtering, definition ranking, question answering, multimedia retrieval, text summarization, and online advertisement. Leveraging machine learning technologies in the ranking process has led to innovative and more effective ranking models, and eventually to a completely new research area called “learning to rank”. Liu first gives a comprehensive review of the major approaches to learning to rank. For each approach he presents the basic framework, with example algorithms, and he discusses its advantages and disadvantages. He continues with some recent advances in learning to rank that cannot be simply categorized into the three major approaches – these include

relational ranking, query-dependent ranking, transfer ranking, and semisupervised ranking. His presentation is completed by several examples that apply these technologies to solve real information retrieval problems, and by theoretical discussions on guarantees for ranking performance. This book is written for researchers and graduate students in both information retrieval and machine learning. They will find here the only comprehensive description of the state of the art in a field that has driven the recent advances in search engine development.

Greeks and Barbarians Springer

In this revised and expanded edition, leading forensic scientist John Trestrail offers a pioneering survey of all that is known about the use of poison as a

weapon in murder. Topics range from the use of poisons in history and literature to convicting the poisoner in court, and include a review of the different types of poisons, techniques for crime scene investigation, and the critical essentials of the forensic autopsy. The author updates what is currently known about poisoners in general and their victims. The Appendix has been updated to include the more commonly used poisons, as well as the use of antifreeze as a poison.

The Great Pyramid McGraw-Hill/Appleton & Lange

An illustrated manual designed to help community health workers learn how to use simple drugs to treat common illnesses. Specific to health conditions in Southeast Asian countries, the book uses

simple explanatory texts and illustrations to communicate instructions for treating illnesses and knowing when a patient must be referred to a doctor. First issued in 1988 and revised in 1992, the book has been further expanded and updated in line with new knowledge and considerable experience with use of the previous editions. The manual has two parts. The first provides instructions for the correct and appropriate use of 34 essential drugs, ranging from aspirin and paracetamol, through chloroquine and oral re-hydration salts, to penicillin tetracycline eye ointment and several vitamins. Each is described according to a common framework that explains how the drug helps, when it should be used, how it is supplied and given to patients, side effects that may occur, and special

precautions to follow. Where appropriate, information on dosage and prescribing schedule by age and weight is set out in tabular form. Part two provides advice for the management or referral of 22 common medical problems moving from anemia, cough, diarrhea, and ear and eye problems through HIV/AIDS, leprosy, malaria and tuberculosis, to poisoning, snakebites, wounds, burns, and shock. Advice on pain relief and on the management of skin and tooth problems is also provided.

The Science of Marijuana UNC Press Books

This book is an ambitious synthesis of the social, economic, political and cultural interactions between Greeks and non-Greeks in the Mediterranean world during the Archaic, Classical and

Hellenistic periods. Instead of traditional and static distinctions between Greeks and Others, Professor Vlassopoulos explores the diversity of interactions between Greeks and non-Greeks in four parallel but interconnected worlds: the world of networks, the world of apoikiai ('colonies'), the Panhellenic world and the world of empires. These diverse interactions set into motion processes of globalisation; but the emergence of a shared material and cultural koine across the Mediterranean was accompanied by the diverse ways in which Greek and non-Greek cultures adopted and adapted elements of this global koine. The book explores the paradoxical role of Greek culture in the processes of ancient globalisation, as well as the peculiar way in which Greek

culture was shaped by its interaction with non-Greek cultures.

Misunderstandings are often perceived as something to be avoided yet delineate an integrative part of everyday work. This book addresses the role that misunderstandings play in collaborative work and, above all, their effects on the organisational result. As exemplified by project collaboration across three offices of a multinational corporation in India, Frauke Mörike explores how misunderstandings shape the organisational system and why they prove not only necessary but even productive for organisational functioning. In doing so, she offers new ways to think about collaboration and establishes

'misunderstanding' as a key factor of insight for the field of organisational research.

Communications, Signal Processing, and Systems Springer

SOUTHERN AFRICA was once regarded as a worthless jumble of British colonies, Boer republics, and African chiefdoms, a troublesome region of little interest to the outside world. But then prospectors chanced upon the world's richest deposits of diamonds and gold, setting off a titanic struggle between the British and the Boers for control of the region. It culminated in the costliest, bloodiest, and most humiliating war that Britain had waged in nearly a century, and left the Boer republics devastated. In this gripping history of the turbulent years leading up to the founding of the modern

state of South Africa in 1910, Martin Meredith portrays the great wealth and raw power, the deceit, corruption, and racism that lay behind Britain's empire-building in southern Africa. *Diamonds, Gold, and War* is a tale of high adventure, high finance, and high politics that also shows the massive impact of white expansion on indigenous African societies. And it explains the rise of the virulent Afrikaner nationalism that eventually took hold, with repercussions lasting nearly a century.

The Complementarity of Feed Resources for Animal Production in Africa Health Research Books

"In Toponymy on the Periphery, Julien Charles Cooper conducts a study of the rich geographies preserved in Egyptian

texts relating to the desert regions east of Egypt. These regions, filled with mines, quarries, nomadic camps, and harbours are often considered as an unimportant hinterland of the Egyptian state, but this work reveals the wide explorations and awareness Egyptians had of the Red Sea and its adjacent deserts, from the Sinai in the north to Punt in the south. The book attempts to locate many of the placenames present in Egyptian texts and analyse their etymology in light of Egyptian linguistics and the various foreign languages spoken in the adjacent deserts and distant shores of the Red Sea"-- *Intimate Relationships* Springer Science & Business Media

This work has been selected by scholars as being culturally important and is part

of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. To ensure a quality reading experience, this work has been proofread and republished using a format that seamlessly blends the original graphical elements with text in an easy-to-read typeface. We appreciate your support of the preservation process, and thank you for being an important part of keeping this

knowledge alive and relevant.

Worlds Beyond the Poles BRILL

Economics makes the incommensurable commensurable by money prices. On the other hand, there are varieties of goodness like the ethical that seem not to fit into the scale of prices of economics, but cannot be neglected in economizing. Ways of integrating ethics into economics must therefore be found. The aim of this book is the integration of the ethical discourse into the economic discourse about the economical and efficient. It investigates into the structure of goodness. The contribution of this volume to the current debate in economic ethics and business ethics lies in its analysis of the different meanings of the good and in its reflection on the possibilities of implementing ethical

goods into the practice of the economist and the manager of the firm. Its essays investigate the role of ethics in social and individual choice. They examine and compare the cultural determinants of the Western and the Japanese economies, their ethical and cultural foundations. They look into the principles of good management. How can the management incorporate human goods and consider the virtues of impartiality and of due consideration to the particular in its business practice? The book develops the idea of an ethical economizing in economics and of an ethical managing in business administration. The business of business is ethical business.

The eight-volume set comprising LNCS volumes 9905-9912 constitutes the

refereed proceedings of the 14th European Conference on Computer Vision, ECCV 2016, held in Amsterdam, The Netherlands, in October 2016. The 415 revised papers presented were carefully reviewed and selected from 1480 submissions. The papers cover all aspects of computer vision and pattern recognition such as 3D computer vision; computational photography, sensing and display; face and gesture; low-level vision and image processing; motion and tracking; optimization methods; physics-based vision, photometry and shape-from-X; recognition: detection, categorization, indexing, matching; segmentation, grouping and shape representation; statistical methods and learning; video: events, activities and surveillance; applications. They are

organized in topical sections on detection, recognition and retrieval; scene understanding; optimization; image and video processing; learning; action, activity and tracking; 3D; and 9 poster sessions.

Life Skills Butterworth-Heinemann Annemarie Schimmel, one of the world's foremost authorities on Persian literature, provides a comprehensive introduction to the complicated and highly sophisticated system of rhetoric and imagery used by the poets of Iran, Ottoman Turkey, and Muslim India. She shows that these images have been used and refined over the centuries and reflect the changing conditions in the Muslim world. According to Schimmel, Persian poetry does not aim to be spontaneous in spirit or highly personal

in form. Instead it is rooted in conventions and rules of prosody, rhymes, and verbal instrumentation. Ideally, every verse should be like a precious stone--perfectly formed and multifaceted--and convey the dynamic relationship between everyday reality and the transcendental. Persian poetry, Schimmel explains, is more similar to medieval European verse than Western poetry as it has been written since the Romantic period. The characteristic verse form is the ghazal--a set of rhyming couplets--which serves as a vehicle for shrouding in conventional tropes the poet's real intentions. Because Persian poetry is neither narrative nor dramatic in its overall form, its strength lies in an "architectonic" design; each precisely expressed image

is carefully fitted into a pattern of linked figures of speech. Schimmel shows that at its heart Persian poetry transforms the world into a web of symbols embedded in Islamic culture.

This book looks at some phenomena within the grammar of the noun phrase in a group of traditional North Germanic

varieties mainly spoken in Sweden and Finland, usually seen as Swedish dialects, although the differences between them and Standard Swedish are often larger than between the latter and the other standard Mainland Scandinavian languages. In addition to being conservative in many respects – e.g. in preserving nominal cases and subject-verb agreement – these varieties also display many innovative features. These include extended uses of definite articles, incorporation of attributive adjectives, and a variety of possessive constructions. Although considerable attention has been given to these phenomena in earlier literature, this book is the first to put them in the perspective of typology and grammaticalization processes. It also

looks for a plausible account of the historical origin of the changes involved, arguing that many of them spread from central Sweden, where they were later reverted due to the influence from prestige varieties coming from southern Scandinavia.

This book brings together papers presented at the 2017 International Conference on Communications, Signal Processing, and Systems (ICCSP 2017),

which was held on July 14–17, 2017 in Harbin, China. Presenting the latest developments and discussing the interactions and links between these multidisciplinary fields, the book spans topics ranging from communications, signal processing and systems. It is aimed at undergraduate and graduate electrical engineering, computer science and mathematics students, researchers and engineers from academia and industry as well as government employees.

Diamonds, Gold, and War BRILL

This book discusses the recent advances in natural computation, fuzzy systems and knowledge discovery. Presenting selected, peer-reviewed papers from the 15th International Conference on Natural Computation, Fuzzy Systems and

Knowledge Discovery (ICNC-FSKD 2019), held in Kunming, China, from 20 to 22 July 2019, it is a useful resource for researchers, including professors and graduate students, as well as R&D staff in industry.
