This book is the perfect complement to the Excel or Access Comprehensive texts, particularly for instructors looking for more complex, real world cases for students to work through. Included are 15 total cases (6 Excel, 6 Access, and 3 integrated). Real world problem solving for business and beyond The Your Office series prepares students to use both technical and soft skills in the real world. Hands-on technical content is woven into realistic business scenarios and focuses on using Microsoft Office(R) as a decision-making tool. The series features a unique running business scenario that connects all of the cases together and exposes students to using Office to solve problems relating to business areas like finance and accounting, production and operations, sales and marketing. Each chapter introduces a realistic business case for students to complete via hands-on steps that are easily identified in blue shaded boxes. Each blue box teaches a skill and comes complete with video and interactive support. Chapters are grouped into Business Units, which collectively illustrate a specific set of business concepts to achieve AACSB-related outcomes. Each Business Unit ends with a Capstone section, testing students' ability to apply concepts and skills beyond a single chapter. Also available with MyITLab MyITLab(R) is an online homework and assessment program designed for Information Technology (IT) courses, to engage students and improve results. Live-in-Application Grader projects come with the convenience of auto-grading and instant feedback, helping students learn more quickly and effectively. Digital badges lets students showcase their Microsoft Office or Computer Concepts competencies, keeping them motivated and focused on their future careers. MyITLab builds the critical skills needed for college and career success.

This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. This book covers introductory Word, Excel, Access, and PowerPoint, with an additional Windows 8 chapter. Move students beyond the point-and-click. The goal of the Exploring series is to move students beyond the point and click, to understanding the why and how behind each skill. And, because so much learning takes place outside of the classroom, this series provides learning tools that students can access anywhere, any time. Students go to college now with a different set of skills than they did years ago. With this in mind, the Exploring series seeks to move students beyond the basics of the software at a faster pace, without sacrificing coverage of the fundamental skills that everyone needs to know. NOTE: This is just the spiral bound book with access card that includes the online. content that used to be on the CD/DVD. There are a lot of books about learning Microsoft(r) Excel. This is yet another such book... though one with a bit of a twist. The process of this book will start with a blank worksheet and develop it into a sophisticated Project Management tool called the 'Quality Scorecard'. Do not be alarmed if you are not a Project Manager, the Scorecard can be used in other realms, limited only by your imagination. At the very least, this exercise will illustrate the capabilities of Excel and teach some valuable techniques in the process. The book assumes the reader knows nothing about Excel and progressively elaborates upon each exercise and technique, building knowledge while providing insights into how to make Excel work for you. It will not overpower you with advanced techniques and vague tips that you may never use. Each subsequent chapter will build on previous work so that by the end of the book, you will have a fully functional (and modifiable) Quality Scorecard and an understanding of how it works. The concepts learned here will be valuable in any context. The final chapter will be a discussion of the Concept of 'Quality by Design', which is the foundation of the Quality Scorecard.

It is widely agreed throughout the world that education and access to education are human rights. In order to accommodate the educational needs of people globally, technology will be required that supports inclusion and promotes equity for both learning processes and governance in educational institutions. In order to achieve this, technological resources must be designed to be accessible and usable for all individuals by implementing user-centered design (UCD) and user experience design (UXD) processes. UXD and UCD Approaches for Accessible Education is an academic research publication that explores thoughts and experiences on accessible and equitable education from perspectives on human-computer interaction, user research, and design thinking. It seeks to improve the understanding on how technology should be designed to truly contribute to and support accessibility and equity in education. Featuring a wide range of topics such as online courses, inclusive education, and virtual reality, this publication is essential for academicians, curriculum designers, researchers, instructional designers, educational software developers, IT consultants, policymakers, administrators, and students.
