### A Supplement ary Dictionary of Transport Studies

Elsevier  
Publishing  
Company  
Geography is  
a system of  
highly  
developed  
sciences  
about the  
environment.  
Geographical  
science  
embracing the  
study of the  
Earth's  
physical

phenomena,  
people and  
their  
economic  
activities has  
always been  
in need of an  
extensive  
terminology.  
Geographical  
terms are  
related to the  
terms of  
natural  
sciences  
(physics,  
chemistry,  
biology,  
geology, etc.)  
and  
humanities  
(history,  
economics,  
sociology,  
etc.) since  
geography is  
based on  
these  
fundamental

subjects.  
Geography  
includes a  
number of  
disciplines and  
subdivisions  
which  
appeared  
along with the  
development  
of the science  
In spite of  
being very  
different  
geographical  
disciplines  
have some  
common tools  
of  
investigation  
which is maps,  
comparative  
method of  
exploration,  
remote  
sensing,  
geoinformatio  
n systems.  
Today very

well developed terminologies of all the specialist fields of geography and related subjects exist in the main world languages. However, they are not always well-correlated. Nowadays geographical terminology requires unification and international correlation more than ever before. Hence the idea of compiling a multilingual polydisciplinary dictionary.

The Dictionary consists of the basic table of terms arranged according to the order of the English alphabet with each term numbered. Each entry consists of the term in English and its equivalents in Russian, French, German, Spanish. Short definitions of terms are given in English and in Russian. The terms are supplied with the necessary grammar labels, such as gender of nouns, plural number, etc.

The Dictionary combines two functions: that of a defining dictionary and that of a bilingual dictionary. These two functions are basically contradictory because usually the defining dictionary is aimed at giving one meaning of the word which is the main and essential one, while the bilingual dictionary tries to give different equivalents of a given word in the other

language in order to supply the user with maximum possible translations, differing in the shades of meanings, thus giving him the possibility to choose the appropriate word. But in our Dictionary we intentionally decided to combine the two functions – defining and multilingual, because a short definition of the term and equivalents in other languages help to

achieve our main aim which consists in showing the basic geographical terminology and harmonizing it in several languages. Having this into consideration we deliberately mixed two types of dictionaries in one. Organized alphabetically via English Provides short definition of geographical terms in English and Russian Includes multilingual translation of

often and additional descriptive text in English, the terms being translated in French, German and Spanish. It is more complete than similar previously published dictionaries or glossaries, and contains all fields of soil science as well as some adjacent fields of other earth sciences, agriculture and engineering.
