This book's authoritative blend of theory and practice makes it a matchless resource for everyone in the archives and records management field.

Стандартизация управления документами Rowman & Littlefield

This book constitutes the thoroughly refereed proceedings of the 12th Italian Research Conference on Digital Libraries, IRCDL 2016, held in Florence, Italy, in February 2016. The 15 papers presented were carefully selected from 23 submissions and cover topics such as formal methods, long-term preservation, metadata creation, management and curation, multimedia, ontology and linked data. The papers deal with numerous multidisciplinary aspects ranging from computer science to humanities in the broader sense, including research areas such as archival and library information sciences; information management systems; semantic technologies; information retrieval; new knowledge

environments.

Digitale Gesundheitskommunikation für alle ist der Kern einer erfolgreichen Digitalisierung im Gesundheitswesen. Sie soll Bürger informieren und zur effektiven Mitgestaltung ermächtigen. Zugleich ist sie die Basis für effizientes Arbeiten der Gesundheitsdienste. Damit diese Vertragspartnerschaft gelingt, müssen Vorgänge, Formulare und Bescheide verständlich, wahrnehmbar und bedienbar sein, gerade auch für Menschen mit Beeinträchtigungen. Vor allem ältere Menschen sind aufgrund chronischer Erkrankungen mit Herausforderungen im Wahrnehmen, Verstehen und Lesen konfrontiert. Voraussetzung für ihren Zugang zur digitalen Gesundheitsversorgung sind technische Barrierefreiheit und eine Kommunikationshilfe – die Deutsche Leichte Sprache (DLS). Dieses Buch gewährt Einblicke in die Praxis und zeigt, wie es gehen kann: · mit praktischen Leitfäden zur Bereitstellung digital-barrierefreier Kommunikation in DLS sowie PDF/UA-Dokumenten, · umfassenden Informationen zu Handicaps, Rechten, Pflichten und Risiken und · gelungenen Best-Practice-Beispielen für die Umsetzung, auch durch Einbindung künstlicher Intelligenz.

This book will help IT and business operations managers who have been tasked with addressing security issues. It provides a solid understanding of security incident response and detailed guidance in the setting up and running of specialist incident management teams. Having an incident response plan is required for compliance with government regulations, industry standards such as PCI DSS, and certifications such as ISO 27001. This book will help organizations meet those compliance requirements.

The automotive industry appears close to substantial change engendered by “self-driving” technologies. This technology offers the possibility of significant benefits to social welfare—saving lives; reducing crashes, congestion, fuel consumption, and pollution; increasing mobility for the disabled; and ultimately improving land use. This report is intended as a guide for state and federal policymakers on the many issues that this technology raises.

Gli atti notarili cartacei sono stati paradigmatici della forma scritta giuridica. Nella transizione al digitale si ripresentano le medesime esigenze di certezza che hanno decretato la centralità della funzione notarile per un millennio dal notariato longobardo in poi. Ma il passaggio dalla carta al bit non é solo un cambio di tecnica della documentazione, é una rivoluzione semiotica, un cambio di paradigma. É la richiesta di certezze dinamiche, immediatamente fruibili on-line. L’atto pubblico notarile da monumento al dogma della volontà negoziale dichiarata, a cruscotto di controllo e guida delle relazioni fra le parti.

What is the licensing framework of standard essential patents (SEPs) for connectivity standards such as 5G and Wi-Fi? How will the framework change with the Internet of Things (IoT)? This book provides comprehensive answers to these questions. For over two decades, connectivity standards have been the subject of litigation and controversy around the globe. Now, with the introduction of 5G and the emergence of the world of connected objects, or the IoT, the licensing framework for SEPs is becoming

even more contentious. In order to bring clarity to the debate, this book analyses and explains key components of a fair, reasonable and non-discriminatory (FRAND) licence for SEPs; clarifies the economic, policy and market background of SEP disputes; examines the interrelated application of contract, patent and competition laws; and describes the approaches by courts and regulators in the EU, US and the UK. Importantly, the book also assesses how the experience from the smartphone and ICT industries can be applied in a new environment of the IoT, and considers what needs to be changed in the future SEP licensing landscape. The book provides a holistic coverage of SEP licensing issues in an attempt to reduce uncertainty within this highly complex and technical area, and will be useful to practitioners, policy makers, SMEs and large technology companies in the IoT, as well as academics interested in the field.

This book describes basic concepts of workflow automation in the graphic industry. There are three main chapters: Scope of Workflows in the Printing Industry, Production Models, and Metadata Formats. The book does not describe the individual business and production steps for manufacturing a print product. Rather, it describes what kinds of data exchanges are required between management software and devices to make the automatic execution of processes possible. Primary audience is students studying graphic arts technology, practitioners at printing and manufacturing companies, and computer scientists who are interested in workflow-related matters. It is presupposed that the reader is familiar with the basic procedures in the printing industry as well with the fundamental concepts of IT technology.

To advance education about ICT standardization, comprehensive and up-to-date teaching materials must be available. With the support of the European Commission, ETSI has developed this textbook to facilitate education on ICT standardization, and to raise the knowledge level of ICT standardization-related topics among lecturers and students in higher education, in particular in the fields of engineering, business administration and law. Readers of this book are not required to have any previous knowledge about standardization. They are introduced firstly to the key concepts of standards and standardization, different elements of the ecosystem and how they interact, as well as the procedures required for the production of standardization documents. Then, readers are taken to the next level by addressing aspects related to standardization such as innovation, strategy, business, and economics. This textbook is an attempt to make ICT standardization accessible and understandable to students. It covers the essentials that are required to get a good overview of the field. The book is organized in chapters that are

self-contained, although it would be advantageous to read the book from cover to cover. Each chapter begins with a list of learning objectives and key messages. The text is enriched with examples and case studies from real standardization practice to illustrate the key theoretical concepts. Each chapter also includes a quiz to be used as a self-assessment learning activity.

Furthermore, each book chapter includes a glossary and lists of abbreviations and references. Alongside the textbook, we have produced a set of slides that are intended to serve as complementary teaching materials in face-to-face teaching sessions. For all interested parties there is also an electronic version of the textbook as well as the accompanying slides that can be downloaded for free from the ETSI website (www.etsi.org/standardization-education).

Records and Information Management: Fundamentals of Professional Practice, Fourth Edition presents principles and practices for systematic management of recorded information. It is an authoritative resource for newly appointed records managers and information governance specialists as well as for experienced records management and information governance professionals who want a review of specific topics. It is also a textbook for undergraduate and graduate students of records management or allied disciplines—such as library science, archives management, information systems, and office administration—that are concerned with the storage, organization, retrieval, retention, or protection of recorded information. The fourth edition has been thoroughly updated and expanded to: Set the professional discipline of RIM in the context of information governance, risk mitigation, and compliance and indicate how it contributes to those initiatives in government agencies, businesses, and not-for-profit organizations Provide a global perspective, with international examples and a discussion of the differences in records management issues in different parts of the world. Its seven chapters are practical, rather than theoretical, and reflect the scope and responsibilities of RIM programs in all types of organizations. Emphasize best practices and relevant standards. The book is organized into seven chapters that reflect the scope and responsibilities of records and information management programs in companies, government agencies, universities, cultural and philanthropic institutions, professional services firms, and other organizations. Topics covered include the conceptual foundations of systematic records management, the role of records management as a business discipline, fundamentals of record retention, management of active and inactive paper records, document imaging technologies and methods, concepts and technologies for organization and retrieval of digital documents, and protection of mission-critical records. In every chapter, the treatment is practical rather than theoretical. Drawing on the author's extensive experience supplemented by insights from records management publications, the book emphasizes key concepts and proven methods that readers can use to manage electronic and physical records.
