This unique manual is a comprehensive, easy-to-read overview of hazards analysis as it applies to the process and allied industries. The book begins by building a background in the technical definition of risk, past industrial incidents and their impacts, ensuing legislation, and the language and terms of the risk field. It addresses the different types of structured analytical techniques for conducting Process Hazards Analyses (PHA), provides a "What If" checklist, and shows how to organize and set up PHA sessions. Other topics include layout and

siting considerations, Failure Modes and Effect Analysis (FMEA), human factors, loss of containment, and PHA team leadership issues.

Alluvial fans are important sedimentary environments. They trap sediment delivered from mountain source areas, and exert an important control on the delivery of sediment to downstream environments, to axial drainages and to sedimentary basins. They preserve a sensitive record of environmental change within the mountain source areas. Alluvial fan geomorphology and sedimentology reflect not only drainage basin size and geology, but change in response to tectonic, climatic and base-

level controls. One of the challenges facing alluvial fan research is to resolve how these gross controls are reflected in alluvial fan dynamics and to apply the results of studies of modern fan processes and Quaternary fans to the understanding of sedimentary sequences in the rock record. This volume includes papers based on up-to-date research, and focuses on three themes: alluvial fan processes, dynamics of Quaternary alluvial fans and fan sedimentary sequences. Linking the papers is an emphasis on the controls of fan geomorphology, sedimentology and dynamics. This provides a basis for integration between geomorphological and sedimentological approaches, and an understanding how fluvial systems respond to tectonic, climatic and base-

level changes.

Verbal Behavior St. Martin's Press
For people and governments around the world, the onset of the COVID-19 pandemic seemed to place the preservation of human life at odds with the pursuit of economic and social life. Yet this simple alternative belies the complexity of the entanglements the crisis has created and revealed, not just between health and wealth but also around morality, knowledge, governance, culture, and everyday subsistence. Didier Fassin and Marion Fourcade have assembled an eminent team of scholars from across the social sciences, conducting research on six continents, to reflect on the multiple ways the coronavirus has entered, reshaped, or exacerbated existing trends

and structures in every part of the globe. The contributors show how the disruptions caused by the pandemic have both hastened the rise of new social divisions and hardened old inequalities and dilemmas. An indispensable volume, *Pandemic Exposures* provides an illuminating analysis of this watershed moment and its possible aftermath.

The Philosopher's Index Harvard University Press

The New York Times bestselling author offers an in-depth account of the life and

death of a controversial doctor, the debate that sparked his assassination, and the place where two Americas collide On May 31, 2009, Scott Roeder walked into a Wichita church, drew a pistol, and shot Dr. George Tiller at point blank range. Tiller, who was the most public practitioner of late-term abortions in America, had been a lightning rod for controversy, regularly referred to in the conservative media as “Tiller, the Baby Killer.” Tiller’s death was a pivotal, public murder in a war that has been raging for decades. It’s a war of violently opposing ideologies, encompassing abortion, but also questions of privacy, sexuality, and religion. It’s being fought in our nation’s courtrooms, school and churches, on television sets, at our dinner tables, and in our bedrooms. And more and more,

the key battlegrounds are in Kansas, once home to Brown vs. Board of Education and some of the bloodiest conflicts of the Civil War. This is a gripping look at a cold-blooded terrorist action, two men representing opposite ideological extremes, and the region where those violent forces clash.

THE ACCLAIMED BOOK, NOW IN

PAPERBACK, with a reading group guide and a new afterword by the author. At

the height of the Cold War, JFK risked committing the greatest crime in human history: starting a nuclear war. Horrified by the specter of nuclear annihilation, Kennedy gradually turned away from his long-held Cold Warrior beliefs and toward a policy of lasting peace. But to the military and intelligence agencies in the United States, who were committed to winning the Cold War at any cost, Kennedy's change of heart was a direct threat to their power and influence. Once these dark "Unspeakable" forces recognized that Kennedy's interests were in direct opposition to their own, they tagged him as a dangerous traitor, plotted his assassination, and orchestrated the subsequent cover-up. Douglass takes readers into the Oval Office during the tense days of the

Cuban Missile Crisis, along on the strange journey of Lee Harvey Oswald and his shadowy handlers, and to the winding road in Dallas where an ambush awaited the President's motorcade. As Douglass convincingly documents, at every step along the way these forces of the Unspeakable were present, moving people like pawns on a chessboard to promote a dangerous and deadly agenda.

Sociocultural Systems Simon and Schuster

Macrosociology--the study of large-scale social structures and the fundamental principles of social organization--was the style of sociology practiced by the founders of the discipline. Today, the social theories of Karl Marx, Max Weber, Émile Durkheim, and Herbert Spencer

(among others) are commonly studied as part of the history of the field, but, although the macrosociological approach that these thinkers advocated is still employed, it no longer dominates the discipline. Instead, sociologists typically adopt a narrower focus, specializing in areas such as social psychology, medicine, religion, or the study of social stratification. Examining the bigger picture is a task often left to public intellectuals. Sociocultural Systems aims to reinstate macrosociology as the heart of the discipline by demonstrating that both classical and contemporary macrosociologists stand upon common ground. Focusing on the broad issues that concerned the founders, Elwell addresses questions such as: Historically, what factors accounted for

the origin, survival, and evolution of sociocultural systems? Why were some societies more technologically advanced than others? What is the origin of capitalism? What factors determine the allocation of goods and services within and among societies? What effects do changes in government and economic institutions have on communities? Elwell argues that, as evolution does for biology, the macrosociological paradigm offers an analytical strategy that can be used both to guide and prioritize research in all of the myriad specialties within sociology and to lay forth an orderly body of knowledge for students. Clearly articulating important sociological principles, Sociocultural Systems provides a critical understanding of social institutions and

issues, while also furnishing a framework for possible solutions to the perennial social crises that are part and parcel of the development of human societies.

What can the ideas of history's greatest economists tell us about the most important issues of our time? 'The best place to start to learn about the very greatest economists of all time' Professor Tyler Cowen, author of *The Complacent Class* and *The Great Stagnation* _____

Since the days of Adam Smith, economists have grappled with a series of familiar problems -- but often their ideas are hard to digest, before we even try to apply them to today's issues. Linda Yueh is renowned for her combination of erudition, as an accomplished economist herself, and accessibility, as a leading writer and broadcaster in this field; and

in *The Great Economists* she explains the key thoughts of history's greatest economists, how their lives and times affected their ideas, how our lives have been influenced by their work, and how they could help with the policy challenges that we face today. In the light of current economic problems, and in particular economic growth, Yueh explores the thoughts of economists from Adam Smith and David Ricardo through Joan Robinson and Milton Friedman to Douglass North and Robert Solow. Along the way she asks, for example: what do the ideas of Karl Marx tell us about the likely future for the Chinese economy? How does the work of John Maynard Keynes, who argued for government spending to create full employment, help us think about state

investment? And with globalization in trouble, what can we learn about handling Brexit and Trumpism? In one accessible volume, this expert new voice provides an overarching guide to the biggest questions of our time. *The Great Economists* includes: Adam Smith David Ricardo Karl Marx Alfred Marshall Irving Fisher John Maynard Keynes Joseph Schumpeter Friedrich Hayek Joan Robinson Milton Friedman Douglass North Robert Solow

_____ 'Economics students, like others, can learn a lot from this book' - Professor Paul Collier, author of *The Bottom Billion* 'Not only a great way to learn in an easily readable manner about some of the greatest economic influences of the past, but also a good way to test your own a priori

assumptions about some of the big challenges of our time' - Lord Jim O'Neill, former Chairman at Goldman Sachs Asset Management, former UK Treasury Minister, and author of The Growth Map 'An extremely engaging survey of the lifetimes and ideas of the great thinkers of economic history' - Professor Kenneth Rogoff, author of The Curse of Cash and co-author of This Time is Different 'This book is a very readable introduction to the lives and thinking of the greats' - Professor Raghuram Rajan, former Governor of the Reserve Bank of India, and author of I Do What I Do and Fault Lines 'Read it not only to learn about the world's great economists, but also to see how consequential thought innovations can be, and have been' - Mohamed el-Erian, Chief Economic Adviser at Allianz,
