Advanced Teaching Methods for the Technology Classroom Turtleback Books

Students have different learning styles! Understanding Learning Styles helps teachers determine the learning style of each student and the appropriate delivery methods to target and address the needs of as many of the intelligences as possible. Different learning-styles are presented in this professional book that helps teachers determine how best to teach their students. Surveys, practical ideas, and suggestions for designing lessons that incorporate multiple learning styles are provided to show teachers how to differentiate instruction. This resource is aligned to the interdisciplinary themes from the Partnership for 21st Century Skills. 208pp.

Enemy Pie (Reading Rainbow Book, Children S Book about Kindness, Kids Books about Learning) Turtleback Books

Good Strategy/Bad Strategy clarifies the muddled thinking underlying too many strategies and provides a clear way to create and implement a powerful action-oriented strategy for the real world. Developing and implementing a strategy is the central task of a leader. A good strategy is a specific and coherent response to—and approach for—overcoming the obstacles to progress. A good strategy works by harnessing and applying power where it will have the greatest effect. Yet, Rumelt shows

that there has been a growing and unfortunate tendency to equate Mom-and-apple-pie values, fluffy packages of buzzwords, motivational slogans, and financial goals with "strategy." In Good Strategy/Bad Strategy, he debunks these elements of "bad strategy" and awakens an understanding of the power of a "good strategy." He introduces nine sources of power—ranging from using leverage to effectively focusing on growth—that are eye-opening yet pragmatic tools that can easily be put to work on Monday morning, and uses fascinating examples from business, nonprofit, and military affairs to bring its original and pragmatic ideas to life. The detailed examples range from Apple to General Motors, from the two Iraq wars to Afghanistan, from a small local market to Wal-Mart, from Nvidia to Silicon Graphics, from the Getty Trust to the Los Angeles Unified School District, from Cisco Systems to Paccar, and from Global Crossing to the 2007-08 financial crisis. Reflecting an astonishing grasp and integration of economics, finance, technology, history, and the brilliance and foibles of the human character, Good Strategy/Bad Strategy stems from Rumelt's decades of digging beyond the superficial to address hard questions with honesty and integrity.

A solid introduction to stable isotopes that can also be used as an instructive review for more experienced researchers and professionals. The book approaches the use of isotopes from the perspective of ecological and biological research, but its concepts can be applied within other disciplines. A novel, step-by-step spreadsheet modeling approach is also presented for circulating tracers in any ecological system, including any favorite system an ecologist might dream up while sitting at a computer. The author's humorous and lighthearted style painlessly imparts the principles of isotope ecology. The online material contains color illustrations, spreadsheet models, technical appendices, and problems and answers.

Understanding Learning Styles Millbrook Press™

More than 325,000 children, teens, and adults in the United States are survivors of childhood cancer. The surgery, radiation, chemotherapy, and stem cell transplants used to cure children can affect growing bodies and developing minds. If survivors know of these potential problems, they can take steps to identify, cope with, or treat them early if they do develop. The third edition of Childhood Cancer Survivors charts the territory for survivors by providing state-of-the-art information about: " Medical late effects from treatment " Emotional aspects of surviving cancer " Schedules for follow-up care " Challenges in the health-care system " Lifestyle choices to maximize health " Discrimination in employment or insurance Woven throughout the text are stories from more than 100 survivors and parents. Authors Keene, Hobbie, and Ruccione are experts in the field of childhood cancer. Keene is the mother of a survivor of childhood leukemia and the author of several books including Childhood Leukemia, Childhood Cancer, Educating the Child with Cancer, and Chemo, Crazyness &

Comfort. Hobbie is Associate Director of the Cancer Survivorship Program at Children's Hospital of Philadelphia. Ruccione is Co-Director of the HOPE (Hematology-Oncology Psychosocial and Education) Program in the Children's Center for Cancer and Blood Diseases at Children's Hospital Los Angeles.

Math Explorations Simon and Schuster

Equal parts action and humor add up to a wholly entertaining introduction to simplifying fractions, in this one-of-a-kind math picture book story. When a valuable fraction goes missing, George Cornelius Factor (a.k.a. GCF) vows to track it down. Knowing that the villainous Dr. Brok likes to disguise his ill-gotten fractions, G.C.F. invents a Reducer—half ray gun, half calculator—that strips away the disguise, reducing the fraction to its lowest common denominator and revealing its true form. With the Reducer in hand, George seeks out Dr. Brok in hopes of retrieving the missing fraction. David Clark's illustrations are packed with humorous details as well as clearly defined fractions and their corresponding reduction equations.

How Big Is a Foot? Millbrook Press

From New York Times bestselling author Sam Kean comes incredible stories of science, history, finance, mythology, the arts, medicine, and more, as told by the Periodic Table. Why did Gandhi hate iodine (I, 53)? How did radium (Ra, 88) nearly ruin Marie Curie's reputation? And why is gallium (Ga, 31) the go-to element for laboratory pranksters? The Periodic Table is a crowning scientific achievement, but it's also a treasure trove of adventure, betrayal, and obsession. These fascinating tales follow every element on the table as they play out their parts in human history, and in the lives of the (frequently) mad scientists who discovered them. The Disappearing Spoon masterfully fuses science with the classic lore of invention, investigation, and discovery -- from the Big Bang through the end of time. Though

solid at room temperature, gallium is a moldable metal that melts at 84 degrees Fahrenheit. A classic science prank is to mold gallium spoons, serve them with tea, and watch guests recoil as their utensils disappear.

Most people think of mathematicians as solitary, working away in isolation. And, it's true, many of them do. But Paul Erdos never followed the usual path. At the age of four, he could ask you when you were born and then calculate the number of seconds you had been alive in his head. But he didn't learn to butter his own bread until he turned twenty. Instead, he traveled around the world, from one mathematician to the next, collaborating on an astonishing number of publications. With a simple, lyrical text and richly layered illustrations, this is a beautiful introduction to the world of math and a fascinating look at the unique character traits that made "Uncle Paul" a great man. *The Boy Who Loved Math* by Deborah Heiligman is a Kirkus Reviews Best Book of 2013 and a New York Times Book Review Notable Children's Book of 2013.

The Long Tail Little, Brown

As in previous editions of *The Essays of Warren Buffett*, this one retains the architecture and philosophy of the original edition but adds selections from Warren Buffett's most recent annual shareholder letters. All the letters are woven together into a fabric that reads as a complete and coherent narrative of a sound business and investment philosophy. As an aid to all readers, and to enable readers of the previous editions to see what is new in this one, a disposition table at the end of the book shows the various places in this collection where selections from each year's letter appear. Footnotes throughout indicate the year of the annual report from which essays are taken. To avoid interrupting

the narrative flow, omissions of text within excerpts are not indicated by ellipses or other punctuation. This new edition is called for not because anything has changed about the fundamentals of Buffett's sound business and investment philosophy but because articulation of that philosophy is always delivered in the context of contemporary events and business conditions so periodic updating is warranted to maintain its currency

What happens when the bottlenecks that stand between supply and demand in our culture go away and everything becomes available to everyone? "The Long Tail" is a powerful new force in our economy: the rise of the niche. As the cost of reaching consumers drops dramatically, our markets are shifting from a one-size-fits-all model of mass appeal to one of unlimited variety for unique tastes. From supermarket shelves to advertising agencies, the ability to offer vast choice is changing everything, and causing us to rethink where our markets lie and how to get to them. Unlimited selection is revealing truths about what consumers want and how they want to get it, from DVDs at Netflix to songs on iTunes to advertising on Google. However, this is not just a virtue of online marketplaces; it is an example of an entirely new economic model for business, one that is just beginning to show its power. After a century of obsessing over the few products at the head of the demand curve, the new economics of distribution allow us to turn our focus to the many more products in the tail, which collectively can create a new market as big as the one we already know. *The Long Tail* is really about the economics of abundance. New efficiencies in distribution, manufacturing, and marketing are essentially resetting the definition of what's commercially viable across the board. If the 20th century was about hits, the 21st will be equally about niches.
