Experts examine censorship, surveillance, and resistance across Asia, from China and India to Malaysia and the Philippines. A daily battle for rights and freedoms in cyberspace is being waged in Asia. At the epicenter of this contest is China—home to the world's largest Internet population and

what is perhaps the world's most advanced Internet censorship and surveillance regime in cyberspace. Resistance to China's Internet controls comes from both grassroots activists and corporate giants such as Google. Meanwhile, similar struggles play out across the rest of the region, from India and Singapore to Thailand and Burma, although each national dynamic is unique. Access Contested, the third volume from the OpenNet Initiative (a collaborative partnership of the Citizen Lab at the University of Toronto's Munk School of

Global Affairs, the Berkman Center for Internet and Society at Harvard University, and the SecDev Group in Ottawa), examines the interplay of national security, social and ethnic identity, and resistance in Asian cyberspace, offering indepth accounts of national struggles against Internet controls as well as updated country reports by ONI researchers. The contributors examine such topics as Internet censorship in Thailand, the Malaysian blogosphere, surveillance and censorship around gender and sexuality in Malaysia, Internet

governance in China, corporate social responsibility and freedom of expression in South Korea and India, cyber attacks on independent Burmese media, and distributed-denial-of-service attacks and other digital control measures across Asia.

**Governing Access to Essential** Resources "O'Reilly Media, Inc." Reports on a new generation of Internet controls that establish a new normative terrain in which surveillance and censorship are routine. Internet filtering, censorship of Web content, and online surveillance are increasing in scale, scope, and sophistication around the world, in democratic countries as well as in authoritarian states. The first generation of Internet controls consisted largely of building firewalls at key Internet gateways; China's famous "Great Firewall of China" is one of the first national Internet filtering systems. Today the new tools for Internet controls that are emerging go beyond mere denial of information. These new techniques, which aim to normalize (or even legalize) Internet control, include targeted viruses

and the strategically timed deployment of distributed denial-of-service (DDoS) attacks, surveillance at key points of the Internet's infrastructure, take-down notices, stringent terms of usage policies, and national information shaping strategies. Access Controlled reports on this new normative terrain. The book, a project from the OpenNet Initiative (ONI), a collaboration of the Citizen Lab at the University of Toronto's Munk Centre for International Studies, Harvard's Berkman Center for Internet and Society, and the SecDev Group, offers six substantial chapters that analyze Internet control in both Western and Eastern Europe and a section of shorter regional reports and country profiles drawn from material gathered by the ONI around the world through a combination of technical interrogation and field research methods. Access Controlled John Wiley & Sons Influential writings make the case for open access to research, explore its implications, and document the early struggles and successes of the open access movement. Peter Suber has been a leading advocate for open access since 2001 and has worked full time on issues of open access since 2003. As a professor of philosophy during the early days of the internet, he realized its power and potential as a medium for scholarship. As he writes now, "it was like an asteroid crash, fundamentally changing the environment, challenging dinosaurs to adapt, and challenging all of us to figure out whether we were dinosaurs." When Suber began putting his writings and course materials online for anyone to use for any purpose, he soon experienced the benefits of that wider exposure. In 2001, he started a newsletter—the Free Online Scholarship Newsletter, which later became the SPARC Open Access Newsletter—in which he explored the implications of open access for research and scholarship. This book offers a selection of some of Suber's most significant and influential writings on open access from 2002 to 2010. In these texts. Suber makes the case for open access to research; answers common questions, objections, and misunderstandings; analyzes policy issues; and documents the growth and evolution of open access during its most critical early decade.

A concise introduction to the basics of open access, describing what it is (and isn't) and showing that it is easy, fast, inexpensive, legal, and beneficial. The Internet lets us share perfect copies of our work with a worldwide audience at virtually no cost. We take advantage of this revolutionary opportunity when we make our work "open access": digital, online, free of charge, and free of most copyright and licensing restrictions. Open access is made possible by the Internet and copyright-holder consent, and many authors, musicians, filmmakers, and other creators who depend on royalties are understandably unwilling to give their consent. But for 350 years, scholars have written peer-reviewed journal articles for impact, not for money, and are free to consent to open access without losing revenue. In this concise introduction, Peter Suber tells us what open access is and isn't, how it benefits authors and readers of research, how we pay for it, how it avoids copyright problems, how it has moved from the periphery to the mainstream, and what its future may hold. Distilling a decade of Suber's influential writing and thinking about open access,

this is the indispensable book on the subject for researchers, librarians, administrators, funders, publishers, and policy makers.

Restricted Access John Wiley & Sons The definitive Cisco SD-Access resource, from the architects who train Cisco's own engineers and partners This comprehensive book guides you through all aspects of planning, implementing, and operating Cisco Software-Defined Access (SD-Access). Essential resources do more than satisfy
people's needs. They ensure a dignified
existence. Since the competition for
essential resources, particularly fresh
water and arable land, is increasing and
standard legal institutions, such as
property rights and national border
controls, are strangling access to
resources for some while delivering
prosperity to others, many are searching
for ways to ensure their fair distribution.
This book argues that the division of
essential resources ought to be governed
by a combination of Voice and Reflexivity.

Voice is the ability of social groups to choose the rules by which they are governed. Reflexivity is the opportunity to question one's own preferences in light of competing claims and to accommodate them in a collective learning process. Having investigated the allocation of essential resources in places as varied as Cambodia, China, India, Kenya, Laos, Morocco, Nepal, the arid American West, and peri-urban areas in West Africa, the contributors to this volume largely concur with the viability of this policy and normative framework. Drawing on their expertise in law, environmental studies, anthropology, history, political science, and economics, they weigh the potential of Voice and Reflexivity against such alternatives as pricing mechanisms, property rights, common resource management, political might, or brute force.

This book is an engaging and accessible collection that celebrates the nuance and depth of student-faculty partnerships in higher education. It aims to break the mold of traditional and power-laden

academic writing by showcasing creative genres such as reflection, poetry, dialogue, interview, vignette, and essay. The collection has invited chapters from renowned scholars in the field alongside new student and staff voices, and it reflects and embodies a wide range of student-staff partnership perspectives from different roles, identities, cultures, countries, and institutions. Access Technology for Blind and Low Vision Accessibility MIT Press Questions about access to scholarship have always raged. The great libraries of the past stood as arguments for increasing access. John Willinsky describes the latest chapter in this ongoing story - online open access publishing by scholarly journals and makes a case for open access as a public good.

Approved by the CIA Publication Review Board. "Duncan Hunter is a great

character... an excellent read." -A Good Thriller Basking in the glory of killing Osama bin Laden, the President revealed that US Navy SEALs carried out the mission. His constant heralding of their heroism and capabilities damaged the SEAL's operational security, revealed tricks of their trade, and endangered them and their families. As some in the Special Operations community expected and feared, a number of SEALs are systematically killed across the country. The Navy's legendary SEAL commander, Captain Bill McGee, believes he is the next target of a sniper and seeks help from a close friend with unusual contacts and capabilities. Duncan Hunter, a retired Marine Corps fighter pilot, flies a topsecret airplane with his mentor, Greg Lynche, the sometimes über-liberal retired CIA Chief of Air Branch. Together, in their guiet airplane, they execute some of the CIA's most sensitive airborne counterterrorism missions under a Special Access Program. Saving McGee from a sniper's bullet comes at a price as Duncan Hunter finds himself at the crossroads either remain a contract pilot and betray a friend or become a patriot and risk

exposure as a traitor. His decision pulls him into one intrigue after another, finally revealing the truth behind several conspiracies hidden behind the firewalls of top-secret security clearances, CIA files, and Special Access Programs.

A range of perspectives on the complex political, philosophical, and pragmatic implications of opening research and scholarship through digital technologies. The Open Access Movement proposes to remove price and permission barriers for accessing peer-reviewed research work--to use the power of the internet to duplicate material at an infinitesimal cost-per-copy. In this volume, contributors show that open access does not exist in a technological vacuum; there are complex political, philosophical, and pragmatic implications for opening research through digital technologies. The contributors examine open access across spans of colonial legacies, knowledge frameworks, publics and politics, archives and digital preservation, infrastructures and platforms, and global communities.
