Bosch Diesel Common Rail Manual
 Common rail injection: advanced technology for diesel engines Bosch launched the first common rail system in 1997. The system is named after the shared high-pressure reservoir (common rail) that supplies all the cylinders with fuel. With conventional diesel injection systems, the fuel pressure has to be generated individually for each injection.

 Remanufactured Common Rail Injectors Bosch's Remanufactured Diesel Injectors are produced at the same Bosch facility as the new diesel injectors. All wearable parts and critical components are replaced with genuine Bosch parts, and the latest original equipment production technology is used.
 Diesel Parts | Bosch Auto Parts
 The Common Rail injection system is made up of the following parts: • A Transfer Pump integrated into the High Pressure pump housing. • A High Pressure Pump fed by fuel at transfer pressure. It sends fuel to the rail under very high pressure. • A Low Pressure Actuator named IMV (Inlet Metering Valve).

 Large

Vehicle Common Rail (HP0) (HP2) Passenger Car Common Rail. Common Rail System. • Maximum Injection Pressure 180 MPa • Uses pilot injection to reduce the engine combustion noise • Fuel raised to high pressure by the supply pump is temporarily accumulated in the rail, then injected after the injector is energized.

 Common Rail Bosch Injectors Cleaning. This was the cheapest one which I had found. There are 3 types of this injector «X», «Y» and «Z». As manufacturer claims that it is impossible to insert in engine all 3 cheap pieces, its must be in combination with others. Not the cheapest injector's cost was 1K
