Biocompatibility of Dental Polymers Abstract. With the long history of use of many materials in dental surgery, biocompatibility concerns are not as great a concern as other issues, such as long-term degradation, mechanical strength problems, and prevention of secondary caries. It is important, however, not to forget that the potential exists for adverse tissue responses to synthetic materials used in repair, augmentation, and repair of natural tissue structures. Biocompatibility of dental materials - PubMed Oral and mucosal adverse reactions to resin-based dental materials have been reported. Numerous studies have examined the biocompatibility of restorative dental materials and their components, and a wide range of test systems for the evaluation of the biological effects of these materials have been developed. This article reviews the biological

aspects of resin-based dental materials and discusses the conventional as well as the new techniques used for biocompatibility assessment of dental ...Materials | Free Full-Text | Biocompatibility of Resin ...The need for clinically relevant in vitro tests of dental materials is widely recognized. Nearly all dental impression materials are introduced into the mouth

just after mixing and allowed to set in contact with the oral tissues. Under these conditions, the materials may be toxic to cells or may sensitize the tissues. Materials | Special Issue : Biocompatibility of Materials biocompatibility of dental materials 1. biocompatibility of dental materials dr. febel huda, m.d.s,dicoi, fici, fad, dld. oral maxillofacial prosthodontist and implantologist diplomate
