JADON POTTS

Sociology for Social Work Taylor & Francis

This book is the first Southern African edition of Stephen P. Robbins's *Organisational Behaviour*, the best-selling organisational behaviour textbook worldwide.

Fifty Key Thinkers on Development
 Pearson South Africa

This popular text contains physics and chemistry data suitable for all A Level Physics and Chemistry students.

Book of Data Psychology Press

The primary objective of the SCSE conference is to create a platform for research scholars, academia, researchers and industry experts to present their research in the areas of Smart Computing and Systems Engineering. The conference encourages submissions covering both theoretical and application aspects in these areas and in interdisciplinary areas. The colloquium will provide the delegates with a forum to discuss the most recent innovations and trends, as well as practical challenges encountered in industrial and services sectors, solutions adopted and, network and build collaborations with fellow researchers from across the world.

Saving Languages Cambridge University Press

This book is about doing innovative research to achieve sustainable and equitable change in people's health and well-being through improved interactions with the environment. It presents experiences from the field of ecosystem approaches to health (or ecohealth research) and some insights and lessons learned. It builds on previous literature, notably Forget (1997), Forget and Lebel (2001), Lebel (2003), and Waltner-Toews et al. (2008). Through case-studies and other contributions by researchers supported by Canada's International Development Research Centre (IDRC), the

book presents evidence of real changes in conditions of people, their health, and the ecosystems that support them. These changes were derived from applications of an ecosystem approach to health in developing regions of the world. The book also illustrates the resulting body of applied, participatory, and action research that improved health and environmental management in developing countries and, in many cases, influenced policies and practices.

The Challenge of Youth Employment in Sri Lanka SAGE

HR managers have to serve the interests of their organizations, comprising employees, customers and the community at large as well as shareholders, or, in the public or voluntary sectors, those who have the ultimate responsibility for what the organization does. It also means exercising social responsibility, being concerned for the interests (well-being) of employees and acting ethically with regard to the needs of people in the organization and the community. Armstrong's *Essential Human Resource Management Practice* provides a complete overview of the practices and processes fundamental to managing people. The text provides a thorough introduction to the core areas of HR including: people resourcing, performance management, learning and development and rewarding people. It also examines the contribution of HR to organizational aims and objectives and how it is integrated within the business. The book is accompanied by online resources for both lecturers and students and adopts an increased focus on employee engagement, a concept which is becoming increasingly prominent in people management, but which is often presented as a mantra without being properly understood; this is examined in detail with reference to recent research. Michael Armstrong's original *Handbook of Human Resource Management* is the classic text for all those studying HR or who are entering the profession for the first time. In this new title Michael Armstrong provides a condensed text which has been rewritten with the non-HR student or professional in mind, describing and evaluating key HRM concepts such as: HRM itself; strategic HRM; the resource-based view; the choice between best practice and best fit; human capital measurement; motivation theory; emotional intelligence; the flexible firm; the learning organization; and financial rewards.

Human Resource Development Relies Upon a Strong Educational Foundation In the *Handbook of Human Resource Development*, Neal Chalofsky, Tonette Rocco, and Michael Lane Morris have compiled a collection of chapters sponsored by the Academy of Human Resource Development to address the fundamental concepts and issues that HR professionals face daily. The chapters are written and supported by professionals who offer a wide range of experience and who represent the industry from varying international and demographic perspectives. Topics addressed form a comprehensive view of the HRD field and answer a number of key questions. Nationally and internationally, how does HRD stand with regard to academic study and research? What is its place in the professional world? What are the philosophies, values, and critical perspectives driving HRD forward? What theories, research initiatives, and other ideas are required to understand HRD and function successfully within this field? As the industry grows, what are the challenges and important issues that professionals expect to face? What hot topics are occupying these professionals now? The *Handbook's* insight and guidelines allows students and HR professionals to build a fundamental understanding of HRD as an industry, as a field of research, and for future professional success.

Tamil Nationalism in Sri Lanka Unesco
This book contains papers in the fields of engineering pedagogy education, public-private partnership and entrepreneurship education, research in engineering pedagogy, evaluation and outcomes assessment, Internet of Things & online laboratories, IT & knowledge management in education and real-world experiences. We are currently witnessing a significant transformation in the development of education and especially post-secondary education. To face these challenges, higher education has to find innovative ways to quickly respond to these new needs. There is also pressure by the new situation in regard to the Covid pandemic. These were the aims connected with the 23rd International Conference on Interactive Collaborative Learning (ICL2020), which was held online by University of Technology Tallinn, Estonia from 23 to 25 September 2020. Since its beginning in 1998, this conference is devoted to new approaches in learning with a focus on collaborative learning. Nowadays the ICL conferences are a forum of the exchange of relevant trends and research results as well as the

presentation of practical experiences in Learning and Engineering Pedagogy. In this way, we try to bridge the gap between 'pure' scientific research and the everyday work of educators. Interested readership includes policymakers, academics, educators, researchers in pedagogy and learning theory, school teachers, learning industry, further and continuing education lecturers, etc.

Handbook of Human Resource Development Springer Science & Business Media

Many cultures accept that a person may die and then come back to life in another form, but Westerners have traditionally rejected the idea. Recently, however, surveys conducted in Europe indicate a substantial increase in the number of Europeans who believe in reincarnation, and numerous claims of reincarnation have been reported. This book examines particular cases in Europe that are suggestive of reincarnation. The first section provides a brief history of the belief in reincarnation among Europeans. The second section considers eight cases from the first third of the twentieth century that were not independently investigated, but were reported and sometimes published by the persons concerned. The third section covers 32 cases from the second half of the twentieth century that were investigated by the author. Many of these cases involved either children who exhibited unusual behavior attributed to a previous life, or adults who experienced recurrent or vivid dreams attributed to a previous life. In the fourth section, the author compares European cases suggestive of reincarnation with those of other countries and cultures.

The sixth edition of an educational handbook revised and updated in 1992 that has become a standard text for training teachers in the health sciences. Unorthodox in its approach, the book challenges teachers to increase their skills so as to make learning easier for students. To this end, readers are given a task-oriented exercise in self-learning that can help them rethink attitudes, reorient teaching objectives, and then master the

appropriate skills. The importance of producing graduates who are able to respond to community and individual health needs is repeatedly emphasized. The book features five main chapters covering educational objectives, evaluation planning, program construction, test and measurement techniques, and the organization of an educational workshop. Within each chapter, theoretical information is presented and followed wherever appropriate by exercise sheets. Such a format makes it possible for the reader to skip and select, test, and choose according to his individual interests. Though most practical examples pertain to the medical and nursing professions, the handbook has also enjoyed wide use in teacher training for the dentistry, pharmacy, and sanitary engineering professions.

A Guide to People Management Sports Science and Management Sports science studies in detail the response of human body to diverse extent of physical activity. Sports management has many branches such as marketing, event management, sports information management and facility management. The sports industry is a thriving economic sector that is consumer-driven and hence, dependent on the performance of athletes and related personnel. This book brings forth some of the most innovative concepts and elucidates the unexplored aspects of sports science and management. The objective of this text is to give a general view of the different areas of this discipline. It strives to provide a fair idea about this field and to help develop a better understanding of the latest advances within sports science and management. Coherent flow of topics, student-friendly language and extensive use of examples make this book an invaluable source of knowledge. Documentation

Focuses on the changing context of education; the changing nature of self-managing schools; their own leadership and management skills within this environment.

Language Loss and Community Response NCELTR

Immortal Hearts concludes Ellen Schreiber's romantic, exciting Vampire Kisses series. In Immortal Hearts from the popular Vampire Kisses series by Ellen Schreiber, Alexander's little sister Athena "Stormy" Sterling comes to Dullsville, stirring up the immortal world. Her visit gives teen goth-girl Raven a clearer picture of what life as a member of Alexander's vampire family would be like. Nothing she sees lessens her desire to become a vampire. She adores Alexander. She's sure spending every night with him and sleeping in his arms in his coffin every day would be the perfect life. But she hasn't been able to convince her vampire love that he should turn her. At least not yet... Fans won't want to miss the last chapter in Raven and Alexander's love story.

Dying Words Springer

The peoples of Sri Lanka have participated in far-flung trading networks, religious formations, and Asian and European empires for millennia. This interdisciplinary volume sets out to draw Sri Lanka into the field of Asian and Global History by showing how the latest wave of scholarship has explored the island as a 'crossroads', a place defined by its openness to movement across the Indian Ocean. Experts in the history, archaeology, literature and art of the island from c.500 BCE to c.1850 CE use Lankan material to explore a number of pressing scholarly debates. They address these matters from their varied disciplinary perspectives and diverse array of sources, critically assessing concepts such as ethnicity, cosmopolitanism and localisation, and elucidating the subtle ways in which the foreign may be resisted and embraced at the same time. The individual chapters, and the volume as a whole, are a welcome addition to the history and historiography of Sri Lanka, as well as studies of the Indian Ocean region, kingship, colonialism, imperialism, and early modernity.

Applied ethnomusicology is an approach guided by principles of social responsibility, which extends the usual academic goal of broadening and deepening knowledge and understanding toward solving concrete problems and toward working both inside and beyond typical academic contexts (International Council for Traditional Music 2007). This edited volume is based on the first symposium of the ICTM's Study Group on Applied Ethnomusicology in Ljubljana, Slovenia in 2008 that brought together more than thirty specialists from sixteen countries worldwide. It contains a Preface, an extensive Introduction, and twelve selected peer-reviewed articles by authors from Australia, Austria, Canada, Germany, Slovenia, Serbia, South Africa, the United Kingdom, and the United States of America, divided into four thematic groups. These groups encompass: diverse perspectives on the growing field of applied ethnomusicology in various geographical and problem-solving contexts; research and teaching-related connotations; the potential in contributing to sustainable music cultures; and the use of music in conflict resolution situations. The edited volume Applied Ethnomusicology: Historical and Contemporary Approaches brings together previously dispersed knowledge and perspectives, and offers new insights to various disciplines within the humanities and social sciences. Rooted in diverse scholarly traditions, it addresses a variety of challenges in today's world and aims to benefit the quality of human existence. *Educating Engineers for Future Industrial Revolutions* Kogan Page Publishers "Using the Web to Support Language Learning introduces a range of different ways learners can use the World Wide Web to achieve their language, content and web learning goals. It includes web strategies and activities that are most commonly used by language teachers." - back cover.

Factors Affecting Academic

Performance World Bank Publications Sri Lanka has long been regarded as a model of a successful welfare state in a low-income setting, yet it has not succeeded in creating a sufficient number of good jobs for the increasing number of young people. Hence, young Sri Lankans perceive their country as an unjust and unequal society, in which mainstream institutions have failed to address inequalities in the distribution of resources, as well as of benefits deriving from economic growth. Against this background, 'The Challenge of Youth

Employment in Sri Lanka' aims to identify ways to improve the opportunities available to new job market entrants by addressing existing inequalities and to help young people more fully realize their potentials. Drawing from original research and a review of existing studies, the authors use the 4Es conceptual framework to analyze four key aspects of labor markets employment creation, employability, entrepreneurship, and equal opportunity identifying main issues and results, current trends, and possible new approaches.

Sports Science and Management SAGE Publications India

How do the benefits of higher education compare with its costs, and how does this comparison vary across individuals and institutions? These questions are fundamental to quantifying the productivity of the education sector. The studies in *Productivity in Higher Education* use rich and novel administrative data, modern econometric methods, and careful institutional analysis to explore productivity issues. The authors examine the returns to undergraduate education, differences in costs by major, the productivity of for-profit schools, the productivity of various types of faculty and of outcomes, the effects of online education on the higher education market, and the ways in which the productivity of different institutions responds to market forces. The analyses recognize five key challenges to assessing productivity in higher education: the potential for multiple student outcomes in terms of skills, earnings, invention, and employment; the fact that colleges and universities are "multiproduct" firms that conduct varied

activities across many domains; the fact that students select which school to attend based in part on their aptitude; the difficulty of attributing outcomes to individual institutions when students attend more than one; and the possibility that some of the benefits of higher education may arise from the system as a whole rather than from a single institution. The findings and the approaches illustrated can facilitate decision-making processes in higher education.

Developments and Advances in Defense and Security Pearson Scott Foresman

Nowadays, society is constantly changing, and new ways of life are being developed by due to nonstop technological advancements. This generates changes in family, schools, the media, etc. New technologies are creating virtual environments to manage learning and academic achievement, and this is a new challenge to approach formal and informal education. In the last few decades, teachers, families, and educational administrators had very well-defined fields of action and roles to play. Now, these roles are disfigured, and influences from all agents are arguable and more difficult to face. At this current stage, problems sometimes appear that require different forms of intervention. Some of the problems are violence towards people; child abuse; drug abuse at increasingly early ages; integration problems due to immigration; dropping out of school; and typical problems related to student development, personality, disabilities, social and psychical maladjustment, teenagers socioaffective relationships, etc. Research on school success and failure

has a long history, but there is still no agreement concerning the prevalence of these variables to explain academic achievement, the relationship between those variables, and which other variables modulate their level of impact. For many years, cognitive psychology has emphasized cognitive function as the most relevant for learning in school. However, recent studies highlight the importance of motivational and affective functions in building consistent models to explain learning and academic achievement. This change of perspective, from the classical cognitive model to a self-regulated learning model, has implied a new orientation in the research of the factors involved in school success and failure. Self-regulated learning models try to integrate students cognitive, socioaffective, and behavioral aspects. These models describe the different components involved in successful learning at all school stages, explaining reciprocal relationships between those components and directly relating learning to personal achievement, motivation, volition, and emotions. With this new paradigm, students not only contribute to strengthening their intelligence, but also their motivational and emotional qualities, all related to achieving personal balance. This book presents studies, ideas, and recommendations to shed light on the complex educational world. Education has limits and difficulties, but it is also the only instrument that can develop students potential into personal success. *A Study of Incest in Central Sri Lanka* Cambridge Scholars Publishing Provides an overview of the issues surrounding language loss.
