This book contains the papers presented at the 9th International Workshop on Field Programmable Logic and Applications (FPL'99), hosted by the University of Strathclyde in Glasgow, Scotland, August 30 - September 1, 1999. FPL'99 is the ninth in the series of annual FPL workshops. The FPL'99 programme committee has been fortunate to have received a large number of high-quality papers addressing a wide range of topics. From these, 33 papers have been selected for presentation at the workshop and a further 32 papers have been accepted for the poster sessions. A total of 65 papers from 20 countries are included in this volume. FPL is a subject area that attracts researchers from both electronic engineering and computer science. Whether we are engaged in research into soft ha-

ware or hard software seems to be primarily a question of perspective. What is unquestionable is that the interaction of groups of researchers from different backgrounds results in stimulating and productive research. As we prepare for the new millennium, the premier European forum for researchers in programmable logic remains the FPL workshop. Next year the FPL series of workshops will celebrate its tenth anniversary. The contribution of so many overseas researchers has been a particularly attractive feature of these events, giving them a truly international perspective, while the informal and convivial atmosphere that pervades the workshops have been their hallmark. We look forward to preserving these features in the future while continuing to expand the size and quality of the events.

This book constitutes the refereed post-conference proceedings of the 5th International Conference on Future Access Enablers for Ubiquitous and Intelligent Infrastructures, FABULOUS 2021, held in May 2021. Due to COVID-19 pandemic the conference was held virtually. This year's conference topic covers security of innovative services and infrastructure in traffic, transport and logistic ecosystems. The 30 revised full papers were carefully reviewed and selected from 60 submissions. The papers are organized in thematic sessions on: Internet of things and smart city; smart environment applications; information and communications technology; smart health applications; sustainable communications and computing infrastructures. *The Hard Drive Bible* CRC Press
Most hardware and software companies experience cycles of success and failure, that pattern is certainly not a

compelling publishing topic. When you add in the name of Apple Computer, the picture changes from ho-hum to humdinger though. Right now, Apple's shares have surged to a 4-year high, and along with the runaway success of Apple's iPod (10 million iPods sold as of Dec 2004, and 2 million+ units sold in the last 3 months alone), Apple stock seems poised to only increase in value. There's a "halo" effect beginning to take hold - simple put, consumers and business people alike are so impressed with iPod's technology and success that they're taking a second look at other Apple products and in particular Macintosh computers. If the current trends continue, Apple will have sparked yet another revolution in the personal computer arena, and will regain ground many thought was lost for good. The Apple Way shows how this company's steps and missteps have molded and shaped them, and what lessons the world at large can learn from Apple. Apple has emerged as a Wall Street phenomenon with its stock increasing in value some 250% in the past year Uses the proven

pedagogy of the existing Way books to provide bite-sized business success maxims and Apple's underlying guiding principles Includes lessons learned the hard way by revealing the company's strengths and obstacles Cruikshank has played a role in developing the following M-H books: Pink Cadillac, Leadership Secrets of Colin Powell, What It Takes to Be Number One, The Essential Vince Lombardi, Get Better or Get Beaten (condensed edition), plus many others *The Evolution of Geotech - 25 Years of Innovation* Springer Science & Business Media InfoWorld is targeted to Senior IT professionals. Deep Energy Retrofit

O'Reilly Media

One of USA Today's Best Business Books of 2008- now updated with a new chapter It's hard to believe that one man revolutionized computers in the 1970s and '80s (with the Apple II and the Mac), animated movies in the 1990s (with Pixar), and digital music in the 2000s (with the iPod and

iTunes). No wonder some people worship Steve Jobs like a god. On the other hand, stories of his epic tantrums and general bad behavior are legendary. Inside Steve's Brain cuts through the cult of personality that surrounds Jobs to unearth the secrets to his unbelievable results. So what's really inside Steve's brain? According to Leander Kahney, who has covered Jobs since the early 1990s, it's a fascinating bundle of contradictions. This expanded edition includes a new chapter on Jobs's very public health crisis and the debate about Apple's future.
