**Some Probable Outcomes of Partial Self-direction in Tenth Grade Biology** Bushra Arshad Originally published in 1985. This is an overview of the evolution of curriculum evaluation since the reforms of the 1960s, presented through the personal and practical knowledge of experienced individuals, rather than abstract theoretical models which hitherto dominated the field. A collection of personal retrospective accounts, by leading evaluators, of their roles in the actual process of

curriculum development, the chapters represent diverse educational systems in a range of countries including Australia, Israel, England and the USA. A variety of innovative curricula are portrayed and the models which emerge are empirically based. Their diversity provides evidence for the need to accommodate and adjust theoretical and methodological principles to real situations. This is a great reference for those with an interest in comparative curriculum development.

On 11/19/04, the Defendant Dover (PA) Area School Dist. announced that teachers would be required to read the following statement to students in the 9th grade biology class: "Because Darwin's Theory is a theory, it continues to be tested as new evidence is discovered. The Theory is not a fact. . . Intelligent Design (ID) is an explanation of the origin of life that differs from Darwin's view." On 1/21/04, Plaintiffs filed a suit challenging the constitutional validity of the resolution. In a ruling, Judge Jones found that the school board did have religious intentions when it added the ID concept to the curriculum, and also that the concept of ID is religion and not science. The verdict is only binding in the Middle dist. of PA but is likely to influence other judges.

Biology Inquiries offers educators a handbook for teaching middle and high school students engaging lessons in the life sciences. Inspired by the National Science Education Standards, the book bridges the gap between theory and practice. With exciting twists on standard biology instruction the author emphasizes active inquiry instead of rote memorization. Biology Inquiries contains many innovative ideas developed by biology teacher Martin Shields. This dynamic resource helps teachers introduce standards-based inquiry and constructivist lessons into their classrooms. Some of the book's classroom-tested lessons are inquiry modifications of traditional "cookbook" labs that biology teachers will recognize. Biology Inquiries provides a pool of active learning lessons to choose from with valuable tips on how to implement them.

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be

meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.
