In my first book on Electric Cars, I covered those which were available in the US. In my new book, I decided to cover the world. I also venture into Electric Planes and EVTOLS - Electric Vertical Takeoff and Landing machines. Even though EVs are very interesting, you might get bored after the 100th or so. To relieve your boredom, I inserted stories about my visits from a couple of outer space aliens who are very interested in Electric Cars. Who says you can't mix research books with sci-fi and humor? I start with the most popular EVs. I cover many parts of the globe. And I cover lesser known Electric cars. Some places around the world don't have good roads or the roads are too crowded. There, electric motorcycles, rickshaws, and other vehicles are more popular than electric cars. And did you know that there's an electric skateboard? Electric Cars come in several models - Sedans, SUVs, Crossovers, Hatchbacks, etc. There are even little electric bubble cars. And there's a Amphibious E-Tricycle Camper. Now is a good time to get into an EV - there's availability. You'll get good range. And you'll save money on gas and maintenance. Besides, bans on ICE vehicles (internal combustion engine - petrol powered cars) are coming. Maybe not tomorrow, but soon. And supermost of all, owning an EV is cool and the wave of the future. And you want to get into the action now because you want to ride the crest of the wave. Some people are still worried about - what happens if the battery dies. I cover that. Good news - not a problem. I also cover converting your car to an EV (or rather hiring someone to do that for you) and EV Rentals. I conclude the book with what it would take to own an EV Dealership, My EV choices, and statements by World Leaders on EVs. I evaluate the

more popular cars and provide a blank evaluation form so you can make your own evaluations. This book is packed with information, but I keep it light so you won't get bored. Actually, that's not true. I kept it light so that I wouldn't get bored.

The primary goal of this book is to explain various RC technical concepts and essential DIY upgrade & maintenance techniques in very simple language. Modern features such as 2.4G radio, Lipo batteries and brushless systems are covered in addition to the more traditional RC terminologies, techniques and technologies. **2012 RC Technology Training Series: Introduction to Brushless Power RC Stadium Truck** Independently Published

Stadium Trucks are primarily designed for jumps and off-road racing, while Short Course Trucks are made to be extremely durable (to absorb contact from other vehicles better than traditional RC trucks) for frequent bashing. Their design concepts are totally different. Simply put, a short course truck is for jumping AND bashing. To protect against impact from bashing, there has to be protection around the car body. The tradeoff is

weight. To sustain the weight, the power system must be able to deliver enough torque. This training book has been developed from the ground up for beginners who know little about the latest electric power RC technology. As part of our RC Technology Self-Paced Training Series, this book gives an introduction to the BRUSHLESS TRUCK architecture.
