10/2020 Cardiovascular System Physiology Functions of the Cardiovascular System. The cardiovascular system has three major functions: transportation of materials, protection from pathogens, and regulation of the body's homeostasis. Transportation: The cardiovascular system transports blood to almost all of the body's tissues. The blood delivers essential nutrients and oxygen and removes wastes and carbon dioxide to be processed or removed from the body. Cardiovascular System - Human Veins, Arteries, Heart May 6th, 2018 - Explore the anatomy of the human cardiovascular system also known as the circulatory system with our detailed diagrams and information' 'Online Course Anatomy and Physiology 101 CEU May 13th, 2018 - Anatomy and physiology are the opposite sides of the 11 / 12 Cardiovascular System Anatomy And Physiology Study Guide The major blood vessels of the heart consist of large arteries and veins that transport blood to and from the different circulatory systems of the body. Coronary Veins | Cardiac Veins The cardiac veins run along the surface of the heart, carrying deoxygenated blood to the right atrium after flowing through the myocardium.
