Cuernavaca, often called the “Mexican Paradise” or “Land of Eternal Spring,” has a deep, rich history. Few visitors to this modern resort city near Mexico City would guess from its Spanish architecture and landmarks that it was governed by its Tlalhuican residents until the early nineteenth century.

Formerly called Cuahnahuac, the city was renamed by the Spanish in the sixteenth century when Hernando Cortés built his stone palacio on its main square and thrust Cuernavaca into the colonial age. In Visions

of Paradise, Robert Haskett presents a history of Cuernavaca, basing his account on an important body of late-seventeenth-century historical records known as primordial titles, written by still unknown members of the Native population. Until comparatively recently, these indigenous-language documents have been dismissed as “false” or “forged” land records. Haskett, however, uses these Nahuatl texts to present a colorful portrait of how the Tlalhuicas of Cuernavaca and its environs made intellectual sense of their place in the colonial scheme, conceived of their relationship to the sacred worlds of both their native religion

and Christianity, and defined their own history. Surveying the local history of Cuernavaca from precontact observations by the Aztecs through postclassic times to the present, with a concentration on early colonial times, Haskett finds that the Native authors of the primordial titles crafted a celebratory history proclaiming themselves to be an enduringly autonomous, essentially unconquered people who triumphed over the rigors of the Spanish colonial system.

Everything a woodturner needs to know about using and implementing the exciting new technology of replaceable carbide cutting tips is included in this guide.

Woodturning tools have taken a quantum leap since the recent introduction of these

tips that have greatly simplified the task of turning in dry stock. Carbide-tipped woodturning tools are safer, faster, easier, and more efficient than traditional tools that require grinding the end of a piece of fluted steel to one of dozens of subjective profiles. The technology of the carbide cutters is fully explained, as are the various shafts and the function of the handle designs, providing insight into how and why these cutters act as they do, and why they are shaped as they are. Removing the intimidating aspects of turning, the guide explains the elimination of sharpening, addresses the issues of chatter and fatigue, and advises on maintenance,

techniques, and usage. A number of projects are included--such as a candlestick, spinning tops, and a basic bowl--that can be completed right away by novice turners, rather than waiting for years to gain enough experience to do the same job with traditional tools.

An innovator in theoretical approaches in the social sciences,

Stein Rokkan developed general models, developmental models, and conceptual maps that specified the main variables and important relationships in European political history. In *Historical Sociology*, Arne Kominrud tests these general hypotheses against specific historical and regional contexts. He uses the case of Eastern Europe after the downfall of the Berlin Wall to extend the geography of the model's range, and introduces possibilities for theoretical modification through an analysis of sequential interactions. Covering a period from the Middle Ages through the 1990s, and addressing phenomena overlooked by Rokkan

such as statebuilding and nationalism, this book demonstrates that Rokkan's models continue to be relevant to modern political science and sociology. Kommisrud's study is a valuable contribution to Rokkanian approaches and the understanding of Eastern European development within the historical and geographic context of Europe as a whole.
