LOVE LAYLAH

[My Pearly Whites \(A Coloring Book for Children\)](#) Lonely Planet

Beneath dense gray clouds through which no sun shone lay a forgotten planet. It was a nightmare world of grotesque and terrifying animal-plant life. Gigantic beetles, spiders, bugs and ants filled the putrid, musty earth - ready to kill and devour anything in sight. There were men amidst this horror - men who cringed and ran from the ravaging monsters and huddled in the mushroom forests at night. Burl was one of these creatures. But one day inspiration hit Burl. He would find a weapon - he would fight back. And with this idea the first step was taken in man's most desperate flight for freedom in this most horrible of all worlds. But it was only a first step.

Having a little sister isn't always a picnic. Older sisters may feel jealous of the time taken away from them, the toys they have to share, and the attention focused on the youngest member of their family. Getting along is often a day-to-day battle, but what can parents do to make this situation easier and to help children realize how special it is to have a sister? In *Spice & Little Sugar*, the delightful new children's book about sibling rivalry, authors Megan Waldrep and Melissa Nelson show big sisters the big benefits, responsibilities, and absolute joys of their role. Told in a whimsical rhyme that children will love to read aloud, *Spice & Little Sugar* first humorously relates all the ways Little Sugar gets on Spice's nerves, from

grabbing her favorite toys to sticking to her like glue when Spice wants to be left alone. But gradually Spice comes to realize that Little Sugar does have her good points, including sticking up for her when she gets in trouble with their parents and saving the day with her cute face. Parents will love the warm, gentle lessons the book teaches about understanding how positives can outweigh negatives, and kids will laugh at the playful illustrations and funny story. The perfect book for siblings, *Spice & Little Sugar* can be read and enjoyed by the whole family, time and time again.

Launched on Oct. 15, 1997, the spacecraft entered orbit around Saturn on June 30, 2004 (PDT). After its four-year prime mission, Cassini's tour was extended twice. Beginning in 2010, Cassini began a seven-year mission extension in which it completed many moon flybys on Saturn and Titan. In April 2017, operators placed Cassini on an impact course that unfolded over five months of daring dives. On Sept. 15, 2017, the spacecraft made its final approach to the giant planet Saturn. But this encounter was like no other. This time, Cassini dived into the planet's atmosphere, sending science data for as long as its small thrusters could keep the spacecraft's antenna pointed at Earth. To its very end, Cassini was a mission of thrilling

exploration.

Did you know Americans generate nearly 250 million tons of trash each year? Or that it takes hundreds of years for a polystyrene cup to decompose? Mankind's negative impact on Mother Earth is tremendous and daily bad news can make it feel overwhelming. But all is not lost! S is for Save the Planet: A How-to-Be-Green Alphabet details the many environmental issues we face and then suggests easy-to-take actions that anyone can do. From the particulars of vermicomposting and xeriscaping, to the three R's of responsible waste management, young readers learn how they can be a force of nature in protecting the earth for generations to come. Brad Herzog spends two months every summer traveling across the country with his wife and two young sons and celebrating America's natural wonders. Together, they have visited more than 30 national parks and seashores. This is Brad's eighth alphabet book for Sleeping Bear Press. He lives on California's Monterey Peninsula. Linda Holt Ayriss is the recipient of a silver medal from the Best in the West Society of Illustrators, and has been recognized in the Communication Arts Annual. She is also the author of Sleeping Bear's E is for Evergreen: A Washington Alphabet. Linda lives in Washington State.

Lucky child - what a wondrous world you live in! This is the theme of Little Blue Planet - a book meant to be read aloud to very young children. As you and the child explore the pages of this book, you will encounter the natural wonders of our world: forests, jungles, volcanoes, swamps, coral reefs and many more. Each of these wonders is captured in a two-page spread, with a scenic watercolor on the left and an imaginative view featuring a child on the right. This book is a first travelogue for the tiny set. It is primarily a picture book, but has just enough text to provide context and encourage the child to imagine what it would be like to visit this place. This book makes for a beautiful and quick read.

"Fascinating . . . memorable . . . revealing . . . perhaps the best of Carl Sagan's books."—The Washington Post Book World (front page review) In Cosmos, the late astronomer Carl Sagan cast his gaze over the magnificent mystery of the Universe and made it accessible to millions of people around the world. Now in this stunning sequel, Carl Sagan completes his revolutionary journey through space and time. Future generations will look back on our epoch as the time when the human race finally broke into a radically new frontier—space. In Pale Blue Dot, Sagan traces the spellbinding history of our launch into the cosmos and assesses the future that looms before us as we move out into our own solar system and on to distant galaxies beyond. The exploration and eventual settlement of other worlds is neither a fantasy nor luxury, insists Sagan, but rather a necessary condition for the survival of the human race. "Takes readers far beyond Cosmos . . . Sagan sees humanity's future in the stars."—Chicago Tribune

Now celebrating the 42nd anniversary of The Hitchhiker's Guide to the Galaxy, soon to be a Hulu original series! "A madcap adventure . . . Adams's writing teeters on the fringe of inspired lunacy."—United Press International Back on Earth with nothing more to show for his long, strange trip through time and space than a ratty towel and a plastic shopping bag, Arthur Dent is ready to believe that the past eight years were all just a figment of his stressed-out imagination. But a gift-wrapped fishbowl with a cryptic inscription, the mysterious disappearance of Earth's dolphins, and the discovery of his battered copy of The Hitchhiker's Guide to the Galaxy all conspire to give Arthur the sneaking suspicion that something otherworldly is indeed going on. God only knows what it all means. Fortunately, He left behind a Final Message of explanation. But since it's light-years away from Earth, on a star surrounded by souvenir booths, finding out what it is will mean hitching a ride to the far reaches of space aboard a UFO with a giant robot. What else is new? "The most ridiculously exaggerated situation comedy known to created beings . . . Adams is irresistible."—The Boston Globe

Mangos from India, pasta from Italy, coffee from Colombia: Every day, we are nourished by a global food system that relies on our planet remaining verdant and productive. But current practices are undermining both human and environmental health, resulting in the paradoxes of obesity paired with malnutrition, crops used for animal feed and biofuels while people go hungry, and more than thirty percent of food being wasted when it could feed the 795 million malnourished worldwide. In Nourished Planet, the Barilla Center for Food & Nutrition offers a global plan for feeding ourselves sustainably. Drawing on the diverse experiences of renowned international experts, the book offers a truly planetary perspective. Essays and interviews showcase Hans Herren, Vandana Shiva, Alexander Mueller, and Pavan Sukhdev, among many others. Together, these experts plot a map towards food for all, food for sustainable growth, food for health, and food for culture. With these ingredients, we can nourish our planet and ourselves.

Thor, the Friendly Bullmastiff Lerner Publications

In January of 2016, Mike Brown, the discoverer of Sedna and other dwarf planets beyond Neptune and Pluto, made the stunning announcement that at least one full size planet (dubbed "Planet 9") is still waiting to be detected in our outer solar system. Astronomers and Astrophysicists have embarked upon an intensive five-year program to scour the heavens in search of this missing corner piece to the solar system puzzle. In honor of that non-trivial pursuit, "A Twisted History: Genesis and the Cosmos" has been freshly edited and greatly expanded. It is not only a trusty bird dog to the epic scavenger hunt that is "Mission Planet 9," but your companion in exploring the mysteries of the larger Milky Way Galaxy as well. The central figure of the Book of Genesis is not a mighty hunter (of men or beasts), but a mild-mannered cultivator of human relations and the celestial arts. It is not Nimrod, but Abraham who is reckoned as deserving of twelve entire chapters (Genesis 12 -23) and portions of two others (Genesis 24-25). He is curiously commanded to look toward the heavens and hunt for stars. In extra-Biblical tradition, Abraham is more specifically identified as the leading astronomer of his Age. With this in mind, an interpretation of the Torah from the perspective of Cosmology takes on renewed focus and significance, and especially in light of recent events. In the Book of Genesis, stargazer Abraham has a Nemesis named Abimelech. Adam is cursed with the company of an older, wiser and higher Serpent. Even more tellingly, Jacob (likened by his son Joseph to the Sun) wrestles with his slightly older, reddish and surly twin (Dwarf Sun) brother Esau. Twins are quite prominent and considered special in the Bible and Myth. Astrophysicists have also recently determined that multiple star systems predominate in our galactic neighborhood, and a number of young, developing star systems of this type are now being studied in detail. What we have not suspected is that our own solar system begun as a binary. In retrospect, it perhaps should have been intuitively obvious. There is two of everything! There are two gas giants, Jupiter and Saturn. There are two nearly identical other gas planets with extensive damage, Neptune and Uranus. There are two nearly identical rocky planets, Earth and Venus. There are two heavily damaged rocky planets, Mercury and Mars. There may even be the remains of two proto-planetary disks, those being the Oort Cloud and Kuiper Belt. How many more clues do we really need? Mike Brown and his colleagues are looking for a planet (and maybe two), but may end up rediscovering our solar system's missing stunted twin instead.
