"This Resource Manual for the 11th edition of Nursing Research: Generating and Assessing Evidence for Nursing Practice complements and strengthens the textbook in important ways. The manual provides opportunities to reinforce the acquisition of basic research skills through systematic learning exercises. We have emphasized exercises that involve careful reading and critical appraisal of actual studies. Critical appraisal skills are increasingly important in an environment that promotes evidence-based nursing practice. Moreover, the ability to think critically about research decisions is fundamental to being able to design and plan one's own study. An important feature of this Resource Manual is the online Toolkit, which offers important resources to beginning and advanced researchers. Our mission was to include easily adaptable tools for a broad range of research situations. In this edition, we have added many more resources for qualitative researchers and tools that can be used in quality improvement projects. In our own careers as researchers, we have found that adapting existing forms, figures, manuals, or protocols is far more efficient and productive than "starting from scratch." By making these tools available as Word files, we have made it possible for you to adapt tools to meet your specific needs, without the tedium of having to retype basic information. We wish we had had this Toolkit in our early years as researchers! We think seasoned researchers are likely to find parts of the Toolkit useful as well"--

Results are presented of a study of nursing and nursing education that focused on the need for continued federal support of nursing education, ways to attract nurses to medically underserved areas, and approaches to encourage nurses to stay in the profession. Findings are presented on whether the aggregate supply of generalist nurses will be sufficient to meet future demand, and how changes that could occur in the health care system might affect demand. Attention is also directed to: how the current and future supply of nurses may be influenced by the costs of nursing education and the sources of education financing; and education for generalist positions in nursing. In addition, the supply and demand situation for nurses educationally prepared for advanced professional positions in nursing is examined. The influence of employer policies and practices in utilization of nursing resources on demand and supply is also addressed. Finally, areas in which further data and studies are needed to better monitor nursing supply and demand are identified. In addition to 21 recommendations, appendices include information on Nursing Training Act appropriations, state reports on nursing issues, certificates for specialist registered nurses, projections of registered nurse supply and requirements, and doctoral programs in nursing.
