Yet, in

an era of life-extending technologies, genetic engineering, corporate social responsibility, and smart technology, the definition of the person is neither benign nor uncontested. Boundaries that previously worked to secure our place in the social order are blurring as never before. What does it mean, then, to be a person in the twenty-first century? In *Impersonation*, Sheryl N.

Hamilton uses five different kinds of persons - corporations, women, clones, computers, and celebrities - to discuss the instability of the concept of personhood and to examine some of the ways in which broader social anxieties are expressed in these case studies. She suggests that our investment in personhood is greater now than it has been for years, and that our ongoing

struggle to define the term is evident in law and popular culture. Using a cultural studies of law approach, the author examines important issues such as whether the person is a gender-neutral concept based on individual rights, the relationship between personhood and the body, and whether persons can be property. *Impersonation* is a highly original study that brings together legal,

<p>philosophical, and cultural expressions of personhood to enliven current debates about our place in the world. <i>The Excavating Engineer</i> Lloyd's Register Young Cassie Logan endures humiliation and witnesses the racism of the KKK as they embark on a cross-burning rampage, before she fully understands the importance her family attributes to having land of</p>	<p>their own. <i>County Business Patterns, Michigan</i> Lloyd's Register Providing colorful photography, instructive diagrams and everyday examples, this exciting resource reveals the science behind virtually everything and is divided into four sections - Mechanics, Natural Forces, Materials and Chemistry and Biology and Medicine. <i>Lloyd's</i></p>	<p><i>Register of Shipping 1927 Steamers</i> Special edition of the Federal Register, containing a codification of documents of general applicability and future effect ... with ancillaries. <i>Indian Trade Journal</i> Routledge The Lloyd's Register of Shipping records the details of merchant vessels over 100 gross tonnes, which are self-propelled and sea-going, regardless of classification. *The Science of Everything* Diagnostics, or fault finding, is a fundamental part of an automotive technician's work, and as automotive systems become increasingly complex there is a greater need for good diagnostic skills. This new edition is fully updated to the latest technological and curriculum developments and is the only book to treat automotive diagnostics as a science rather than a check-list procedure. Each chapter includes basic principles and examples of a vehicle system followed by the appropriate diagnostic techniques, complete with useful diagrams, flow charts, case studies and self-assessment questions. The book will help new students develop diagnostic skills and help experienced technicians improve even further. With added content relating to serial code readers and the use of computers in diagnostics (particularly laptop based diagnostics) for all areas such as engines, chassis, transmission and electrical systems, the diagnostic procedures in this new edition have been expanded and clearly illustrated to match new and existing qualifications and standards. ¶The first book to focus on the science of diagnostics

complete with overview descriptions of how systems operate, diagnostic case studies, detailed diagrams and flow charts, and self-assessment questions

â€¢ Essential text for students studying fault diagnosis and repair, and valuable reference for automotive personnel, from mechanics to

service managers.

â€¢ Covers IMI and City & Guilds Technical Award, Certificate and Diploma requirements, plus NVQ/VRQ levels 3 & 4, and HNC/D courses
