Kidneys and Urinary System:

MedlinePlus The Renal System At A Renal system, in humans, organ system that includes the kidneys, where urine is produced, and the ureters, bladder, and urethra for the passage, storage, and voiding of urine. In many respects the human excretory, or urinary, system resembles those of other mammalian species, but it has its own unique structural and functional characteristics. renal system | Definition, Function, Diagram, & Facts ... Urinary System: Facts, Functions & Diseases.

The urinary system, also known as the renal system, produces, stores and eliminates urine, the fluid waste excreted by the kidneys. The kidneys make urine by filtering wastes and extra water from blood. Urine travels from the kidneys through two thin tubes called ureters and fills the bladder. Urinary System: Facts, Functions & Diseases | Live Science The urinary system, also known as the renal system or urinary tract, consists of the kidneys, ureters, bladder, and the urethra. The purpose of the urinary system is to eliminate waste from the body, regulate blood volume and blood pressure, control levels of electrolytes and metabolites, and regulate blood pH. Urinary system -

WikipediaRenal System Renal System. Mark Kester PhD, ... The renal system is all about osmotic balance. Renal System and Urinary Tract. The renal system consists of the kidneys, ureters, bladder,...
