This book will provide in-depth analysis of concepts and step by step configurations for planning and consolidation for SAP BPC 10.1 classic version. We start with detail explanation of BPC components used for both planning and consolidation then we move on to consolidation specific pieces. We will examine the purpose of each component, where it fits into the whole process, and what options are available to configure the system. Rather than just reading about how to create an object, we'll actually perform a demo exercise with step-by-step instructions for configuration. I had also included backup copies which can be installed on your system directly if needed, rather developing them. For planning demo, I had used cost center planning which includes features like creating dimensions and models; master and transactional data loads; input schedules; reports; logic scripts and so on. For consolidation demo, I had considered commonly used legal consolidation process flow which includes net Income to retained earnings movements, currency translations, IC Matching and Booking, US Eliminations, COI, Minority Interest and Goodwill. Along with the configuration steps, each chapter provides analysis of the results of the exercise and their significance within a financial statement.

Incorporate the Benefits of Activity-Based Costing into the Efficiencies of Your SAP R/3 System Given SAP's dominance in the enterprise resource planning (ERP) market, many companies and their managers encounter SAP AG applications in some form or another. Many of these organizations have recognized the value of utilizing Activity-Based Costing/Management concepts to perform more accurate cost assignments or drive performance initiatives. Managers are then faced with trying to determine how Activity-Based Costing can be incorporated into the SAP environment. The 123s of ABC in SAP is the first book of its kind designed to help business managers understand the capabilities of the SAP R/3 business application to support Activity-Based Costing, Management, and Budgeting. Divided into three parts—the conceptual foundation, the capabilities of SAP ABC, and integration with other tools—the book provides readers with the following: An explanation of how Activity-Based Costing can be used with SAP Helpful hints for implementing ABC into SAP Insights into the most common difficulties and potential solutions when implementing ABC into SAP Summary tables that highlight key decisions to be made, implementation hints, and organizational challenges Detailed descriptions of SAP software applications to support the Activity-Based Costing approach as well as the integration of SAP R/3 with Oros software Examples of the tandem usage of Resource Consumption Accounting with Activity-Based Costing

In today's competitive business environment, most companies realize that the better they can manage their customer relationships, the more successful they will become. Customer Relationship Management (CRM) software systems are key tools for companies to manage the customer-facing processes of their businesses. However, many companies have resisted implementing this most critical customer-oriented application due in large part to the lack of a single-point resource on implementing a CRM system. This book attempts to fill that gap. Implementing SAP® CRM will help technologists and managers come to grips with the vision, concept, and technology of CRM. It begins by laying out the groundwork for understanding CRM. It explains the concept and context of CRM and the tangible business benefits of CRM adoption. Demonstrating a professional approach to the evaluation and selection of SAP, it details the critical success factors (CSFs), patterns, and anti-patterns of a successful SAP CRM implementation. CRM implementations can add significant benefit to the company's bottom line only if the company first transforms itself into a customer-centric and customer-responsive enterprise. This book explains what it means to be a customer-centric and responsive enterprise, and provides a framework for business operations based on customer relationships, rather than the traditional four Ps (product, positioning, price, promotion). It further spells out business process reengineering (BPR) strategies to configure internal business processes and operations with SAP CRM to improve customer-facing strategies, services, and relationships.
