Environmental management is a global phenomenon, embracing all businesses in all countries, whether or not there already exists an organized response to managing environmental impacts. Today, there are gross inequalities between the world's richest and poorest nations in terms of income distribution, consumption patterns, access to resources and environmental impact. Yet both the developed north and the developing south are committed, at least in words, to achieving sustainable development. Public awareness of environmental issues in the North has been rising in recent years and further degradation is now largely minimized through more stringent regulatory regimes, voluntary agreements and growing consumer and stakeholder pressure on corporations. Still, the north is continuing to lead an environmentally unsustainable lifestyle as environmental improvements are nullified by overall increases in consumption levels. In the south, a billion people still do not have access to the most basic needs. Poor countries need to accelerate their consumption growth if they are to ensure that the lives of their people are enriched. However, with rapid economic growth and corresponding increases in consumption now under way, their environmental impact is soon to become substantially greater. In a world that strives towards stemming global crises such as climate change, the path already taken by the rich and high-growth economies over the past century cannot be repeated by the south if the desired objective is to create a future that is truly sustainable. *Growing Pains* examines environmental management in the south from a number of perspectives. It is designed to stimulate the discussion about the role that corporations and national and international organizations play in sustainable development. It does not offer panaceas, as each country has its own problems and opportunities; and, after almost 50 years of failed panacea-oriented economic development policy transfer from the north to the south, it is time to abandon hope for universal solutions and instead look to individual approaches that work. The book is divided into five themes: globalization; the role of business; a focus on national strategies; trade and the environment; and the organizational and structural challenges of sustainable development. With contributions from an outstanding collection of authors in both the developed and developing worlds including UNIDO; the Thailand Environment Institute, Arthur D. Little, Inc., Shell Peru; IUCN, the Russian Academy of Sciences and IIED, this important and unique new book presents a body of work that will provide essential reading for businesses working in developing countries, environmental and developmental NGOs and researchers engaged in the debate and sharing of best practice in this increasingly critical subject area.

Why you need a writing revolution in your classroom and how to lead it The Writing Revolution (TWR) provides a clear method of instruction that you can use no matter what subject or grade level you teach. The model, also known as The Hochman Method, has demonstrated, over and over, that it can turn weak writers into strong communicators by focusing on specific techniques that match their needs and by providing them with targeted feedback. Insurmountable as the challenges faced by many students may seem, The Writing Revolution can make a dramatic difference. And the method does more than improve writing skills. It also helps: Boost reading comprehension Improve organizational and study skills Enhance speaking abilities Develop analytical capabilities The Writing Revolution is as much a method of teaching content as it is a method of teaching writing. There's no separate writing block and no separate writing curriculum. Instead, teachers of all subjects adapt the TWR strategies and activities to their current curriculum and weave them into their content instruction. But perhaps what's most revolutionary about the TWR method is that it takes the mystery out of learning to write well. It breaks the writing process down into manageable chunks and then has students practice the chunks they need, repeatedly, while also learning content.
