NEW YORK TIMES

BESTSELLER

Shortlisted

for the Financial

Times/McKinsey Business

Book of the Year Award

The unbelievable story of
a secretive

mathematician who

pioneered the era of the
algorithm--and made \$23

billion doing it. Jim Simons
is the greatest money

maker in modern financial
history. No other investor-

-Warren Buffett, Peter

Lynch, Ray Dalio, Steve
Cohen, or George Soros--
can touch his record.

Since 1988, Renaissance's
signature Medallion fund

has generated average
annual returns of 66

percent. The firm has
earned profits of more

than \$100 billion; Simons
is worth twenty-three

billion dollars. Drawing on unprecedented access to Simons and dozens of current and former employees, Zuckerman, a veteran Wall Street Journal investigative reporter, tells the gripping story of how a world-class mathematician and former code breaker mastered the market. Simons pioneered a data-driven, algorithmic approach that's sweeping the world. As Renaissance became a market force, its executives began influencing the world beyond finance. Simons

became a major figure in scientific research, education, and liberal politics. Senior executive Robert Mercer is more responsible than anyone else for the Trump presidency, placing Steve Bannon in the campaign and funding Trump's victorious 2016 effort. Mercer also impacted the campaign behind Brexit. *The Man Who Solved the Market* is a portrait of a modern-day Midas who remade markets in his own image, but failed to anticipate how his success would impact his firm and

his country. It's also a story of what Simons's revolution means for the rest of us.

Currency

The interactions that occur in securities markets are among the fastest, most information intensive, and most highly strategic of all economic phenomena. This book is about the institutions that have evolved to handle our trading needs, the economic forces that guide our strategies, and

statistical methods of using and interpreting the vast amount of information that these markets produce. The book includes numerous exercises.

All About High-Frequency Trading Academic Press
Remarkable puzzlers, graded in difficulty, illustrate elementary and advanced aspects of probability. These problems were selected for originality, general interest, or because they demonstrate valuable techniques. Also includes detailed solutions.

A Primer for Financial Engineering John Wiley & Sons

The widespread availability of high-quality, high-frequency data has revolutionised the study of financial markets. By describing not only asset prices, but also market participants' actions and interactions, this wealth of information offers a new window into the inner workings of the financial ecosystem. In this original text, the authors discuss empirical facts of financial markets and introduce a wide range of models,

from the micro-scale mechanics of individual order arrivals to the emergent, macro-scale issues of market stability. Throughout this journey, data is king. All discussions are firmly rooted in the empirical behaviour of real stocks, and all models are calibrated and evaluated using recent data from Nasdaq. By confronting theory with empirical facts, this book for practitioners, researchers and advanced students provides a fresh, new, and often surprising

perspective on topics as diverse as optimal trading, price impact, the fragile nature of liquidity, and even the reasons why people trade at all.

Twenty benefits from the three-fund total market index portfolio. The Bogleheads' Guide to The Three-Fund Portfolio describes the most popular portfolio on the Bogleheads forum. This all-indexed portfolio contains over 15,000 worldwide securities, in just three easily-managed

funds, that has outperformed the vast majority of both professional and amateur investors. If you are a new investor, or an

experienced investor who wants to simplify and improve your portfolio,

The Bogleheads' Guide to The Three-Fund Portfolio is a short, easy-to-read guide to show you how.

Drive CRC Press

This book will prepare you for quantitative finance interviews by helping you zero in on the key concepts that are frequently tested in such

interviews. In this book we analyze solutions to more than 200 real interview problems and provide valuable insights into how to ace quantitative interviews. The book covers a variety of topics that you are likely to encounter in quantitative interviews: brain teasers, calculus, linear algebra, probability, stochastic processes and stochastic calculus, finance and programming.

The Bogleheads' Guide to the Three-Fund Portfolio Cambridge University Press

Focusing on market microstructure, Harris (chief economist, U.S. Securities and Exchange Commission) introduces the practices and regulations governing stock trading markets. Writing to be understandable to the lay reader, he examines the structure of trading, puts forward an economic theory of trading, discusses speculative trading strategies, explores liquidity and volatility, and considers the evaluation of trader performance. Volatility Trading

Elsevier

The New York Times bestseller that gives readers a paradigm-shattering new way to think about motivation from the author of *When: The Scientific Secrets of Perfect Timing* Most people believe that the best way to motivate is with rewards like money—the carrot-and-stick approach. That's a mistake, says Daniel H. Pink (author of *To Sell Is*

Human: The Surprising Truth About Motivating Others). In this provocative and persuasive new book, he asserts that the secret to high performance and satisfaction—at work, at school, and at home—is the deeply human need to direct our own lives, to learn and create new things, and to do better by ourselves and our world. Drawing on four decades of scientific research on human motivation, Pink exposes the mismatch between what science knows and

what business does—and how that affects every aspect of life. He examines the three elements of true motivation—autonomy, mastery, and purpose—and offers smart and surprising techniques for putting these into action in a unique book that will change how we think and transform how we live.

Self-evaluation Instrument
John Wiley & Sons

Wealthy, powerful, and potentially dangerous, hedge-fund managers have emerged as the stars of twenty-first

century capitalism. Based on unprecedented access to the industry, *More Money Than God* provides the first authoritative history of hedge funds. This is the inside story of their origins in the 1960s and 1970s, their explosive battles with central banks in the 1980s and 1990s, and finally their role in the financial crisis of 2007-9. Hedge funds reward risk takers, so they tend to attract larger-than-life personalities. Jim Simons began life as a code-breaker and mathematician, co-

authoring a paper on theoretical geometry that led to breakthroughs in string theory. Ken Griffin started out trading convertible bonds from his Harvard dorm room. Paul Tudor Jones happily declared that a 1929-style crash would be 'total rock-and-roll' for him. Michael Steinhardt was capable of reducing underlings to sobs. 'All I want to do is kill myself,' one said. 'Can I watch?' Steinhardt responded. A saga of riches and rich egos, this is also a history of discovery. Drawing on

insights from mathematics, economics and psychology to crack the mysteries of the market, hedge funds have transformed the world, spawning new markets in exotic financial instruments and rewriting the rules of capitalism. And while major banks, brokers, home lenders, insurers and money market funds failed or were bailed out during the crisis of 2007-9, the hedge-fund industry survived the test, proving that money can be successfully managed

without taxpayer safety nets. Anybody pondering fixes to the financial system could usefully start here: the future of finance lies in the history of hedge funds. The Front Office Courier Corporation This book bridges the fields of finance, mathematical finance and engineering, and is suitable for engineers and computer scientists who are looking to apply engineering principles to financial markets. The book builds from the fundamentals, with the

help of simple examples, clearly explaining the concepts to the level needed by an engineer, while showing their practical significance. Topics covered include an in depth examination of market microstructure and trading, a detailed explanation of High Frequency Trading and the 2010 Flash Crash, risk analysis and management, popular trading strategies and their characteristics, and High Performance DSP and Financial Computing. The book has many

examples to explain financial concepts, and the presentation is enhanced with the visual representation of relevant market data. It provides relevant MATLAB codes for readers to further their study. Please visit the companion website on <http://booksite.elsevier.com/9780128015612/> Provides engineering perspective to financial problems In depth coverage of market microstructure Detailed explanation of High Frequency Trading and 2010 Flash Crash Explores

risk analysis and management Covers high performance DSP & financial computing *Assistant Payroll Supervisor* Springer Science & Business Media Doing well with money isn't necessarily about what you know. It's about how you behave. And behavior is hard to teach, even to really smart people. Money—investing, personal finance, and business decisions—is typically taught as a math-based field, where data and formulas tell us exactly what to do. But in

the real world people don't make financial decisions on a spreadsheet. They make them at the dinner table, or in a meeting room, where personal history, your own unique view of the world, ego, pride, marketing, and odd incentives are scrambled together. In *The Psychology of Money*, award-winning author Morgan Housel shares 19 short stories exploring the strange ways people think about money and teaches you how to make better sense of one of life's most

important topics.
Entertaining Mathematical Puzzles Penguin
This is by far the most exhaustive biography on Niels Stensen, anatomist, geologist and bishop, better known as "Nicolaus Steno". We learn about the scientist's family and background in Lutheran Denmark, of his teachers at home and abroad, of his studies and travels in the Netherlands, Belgium, France, Italy, Austria, Hungary, Bohemia and Germany, of his many pioneering achievements in anatomy and geology,

of his encounters with Swammerdam, Malpighi and with members of the newly established Royal Society of London and the Accademia del Cimento in Florence, and with the philosopher Spinoza. It further treats Stensen's religious conversion. The book includes the full set of Steno's anatomical and geological scientific papers in original language. The editors thoroughly translated the original Latin text to English, and included numerous footnotes on the background of this

bibliographic and scientific treasure from the 17th century.

More Money Than God
American Mathematical Soc.

One of the major concerns in urban development is proper wastewater management. In many developing countries, the lack of a comprehensive wastewater management law jeopardizes sustainable urban development. This is true in Indonesia where wastewater management regulations at the local level are inadequate. This

publication discusses the basic principles of wastewater management services and is designed to be a guidebook for the development of local urban wastewater management legislation. This guidebook's chapters and sections can be readily transformed into the chapters and articles of a local regulation.

McGraw Hill Professional
Build an agile, responsive

portfolio with a new approach to global asset allocation Adaptive Asset Allocation is a no-nonsense how-to guide for dynamic portfolio management. Written by the team behind Gestaltu.com, this book walks you through a uniquely objective and unbiased investment philosophy and provides clear guidelines for execution. From foundational concepts and timing to forecasting and portfolio optimization, this book shares insightful perspective on portfolio

adaptation that can improve any investment strategy. Accessible explanations of both classical and contemporary research support the methodologies presented, bolstered by the authors' own capstone case study showing the direct impact of this approach on the individual investor. Financial advisors are competing in an increasingly commoditized environment, with the added burden of two substantial bear markets

in the last 15 years. This book presents a framework that addresses the major challenges both advisors and investors face, emphasizing the importance of an agile, globally-diversified portfolio. Drill down to the most important concepts in wealth management

Optimize portfolio performance with careful timing of savings and withdrawals

Forecast returns 80% more accurately than assuming long-term averages

Adopt an investment framework for stability, growth, and

maximum income

An optimized portfolio must be structured in a way that allows quick response to changes in asset class risks and relationships, and the flexibility to continually adapt to market changes. To execute such an ambitious strategy, it is essential to have a strong grasp of foundational wealth management concepts, a reliable system of forecasting, and a clear understanding of the merits of individual investment methods.

Adaptive Asset Allocation

provides critical background information alongside a streamlined framework for improving portfolio performance.

The Psychology of Money
Simon & Schuster

Research in mathematics is much more than solving puzzles, but most people will agree that solving puzzles is not just fun: it helps focus the mind and increases one's armory of techniques for doing mathematics.

Mathematical Puzzles makes this connection explicit by isolating important mathematical

methods, then using them to solve puzzles and prove a theorem.

Features A collection of the world's best mathematical puzzles Each chapter features a technique for solving mathematical puzzles, examples, and finally a genuine theorem of mathematics that features that technique in its proof Puzzles that are entertaining, mystifying, paradoxical, and satisfying; they are not just exercises or contest problems.

Lecturing Birds on Flying

John Wiley & Sons
The rousing story of the last gasp of human agency and how today's best and brightest minds are endeavoring to put an end to it. It used to be that to diagnose an illness, interpret legal documents, analyze foreign policy, or write a newspaper article you needed a human being with specific skills—and maybe an advanced degree or two. These days, high-level tasks are increasingly being handled by algorithms that can do precise work

not only with speed but also with nuance. These “bots” started with human programming and logic, but now their reach extends beyond what their creators ever expected. In this fascinating, frightening book, Christopher Steiner tells the story of how algorithms took over—and shows why the “bot revolution” is about to spill into every aspect of our lives, often silently, without our knowledge. The May 2010 “Flash Crash” exposed Wall Street's reliance on

trading bots to the tune of a 998-point market drop and \$1 trillion in vanished market value. But that was just the beginning. In *Automate This*, we meet bots that are driving cars, penning haiku, and writing music mistaken for Bach's. They listen in on our customer service calls and figure out what Iran would do in the event of a nuclear standoff. There are algorithms that can pick out the most cohesive crew of astronauts for a space mission or identify the next Jeremy Lin. Some

can even ingest statistics from baseball games and spit out pitch-perfect sports journalism indistinguishable from that produced by humans. The interaction of man and machine can make our lives easier. But what will the world look like when algorithms control our hospitals, our roads, our culture, and our national security? What happens to businesses when we automate judgment and eliminate human instinct? And what role will be left for doctors, lawyers, writers,

truck drivers, and many others? Who knows—maybe there's a bot learning to do your job this minute.

[A Practical Guide To Quantitative Finance Interviews](#) Courier

Corporation

LECTURING BIRDS ON

FLYING For the past few

decades, the financial world has often displayed an unreasonable willingness to believe that "the model is right, the market is wrong," in spite of the fact that these theoretical machinations were largely responsible

for the stock market crash of 1987, the LTCM crisis of 1998, the credit crisis of 2008, and many other blow-ups, large and small. Why have both financial insiders (traders, risk managers, executives) and outsiders (academics, journalists, regulators, the public) consistently demonstrated a willingness to treat quantifications as gospel? Nassim Taleb first addressed the conflicts between theoretical and real finance in his technical treatise on options, *Dynamic*

Hedging. Now, in *Lecturing Birds on Flying*, Pablo Triana offers a powerful indictment on the trustworthiness of financial theory, explaining—in jargon-free plain English—how malfunctions in these quantitative machines have wreaked havoc in our real world. Triana first analyzes the fundamental question of whether financial markets can in principle really be solved mathematically. He shows that the markets indeed cannot be tamed with equations, presenting a

long and powerful list of obstacles to prove his point: maverick unlawful human actions rule the markets, unexpected and unimaginable events shape the markets, and historical data is not necessarily a trustworthy guide to the future of the markets. The author then examines the sources of origin of many prevalent theories and mathematical dictums. He details how the field of financial economics evolved from a descriptive discipline to an abstract one dedicated

to technically concocting professors' own versions of how such a world should work. He goes on to explain how Wall Street and other financial centers became eager employers of scientists, and how scientists became eager employees of financial firms. Triana concludes with an in-depth discussion of the most significant historical episodes of theory-caused real-life market malaise, with a strong emphasis on the current credit crisis. In the end, *Lecturing Birds on Flying* calls for the

radical substitution of good old-fashioned common sense in place of mathematical decision-making and the restoration to financial power of those who are completely unchained to the iron ball of classroom-obtained qualifications. *Quant Job Interview Questions and Answers* Penguin
Now a major motion picture! The "deliciously intense" (USA TODAY) New York Times bestselling phenomenon follows a good girl drawn to a very bad boy... The

new Abby Abernathy is a good girl. She doesn't drink or swear and has the appropriate number of cardigans in her wardrobe. With the darkness of her past behind her, she believes her freshman year at college is the start of a new beginning. But then she meets Travis Maddox. Lean, cut, and covered in tattoos, Eastern University's Walking One-Night Stand is exactly what Abby needs to avoid. Intrigued by her resistance to his appeal, Travis tricks her with a

simple bet. If he loses, he must remain abstinent for a month. If Abby loses, she must live in his apartment for the same amount of time. Either way, Travis has no idea that he has met his match in this “beautifully sexy, beautifully intense, and beautifully perfect” (Jessica Park, New York Times bestselling author). Urban Wastewater Management in Indonesia Penguin
This book contains expository papers that give an up-to-date account of recent

developments and open problems in the geometry and topology of manifolds, along with several research articles that present new results appearing in published form for the first time. The unifying theme is the problem of understanding manifolds in low dimensions, notably in dimensions three and four, and the techniques include algebraic topology, surgery theory, Donaldson and Seiberg-Witten gauge theory, Heegaard Floer homology, contact and

symplectic geometry, and Gromov-Witten invariants. The articles collected for this volume were contributed by participants of the Conference "Geometry and Topology of Manifolds" held at McMaster University on May 14-18, 2004 and are representative of the many excellent talks delivered at the conference. *Introduction to Counting and Probability* John Wiley & Sons
NOW COMPLETELY UPDATED to reflect the

changes in tax legislation, health insurance, and the new investment realities. In this “highly valuable resource” (Publishers Weekly, starred review) Quinn “provides simple, straightforward” (The New York Times) solutions to the universal retirement dilemma—how to make your limited savings last for life—covering mortgages, social security, income investing, annuities, and more! Will you run out of money in your older age? That’s the biggest worry for people newly retired or

planning to retire. Fortunately, you don’t have to plan in the dark. Jane Bryant Quinn tells you how to squeeze a higher income from all your assets—including your social security account (get every dollar you’re entitled to), a pension (discover whether a lump sum or a lifetime monthly income will pay you more), your home equity (sell, rent, or take a reverse mortgage?), savings (how to use them safely to raise your monthly income), retirement accounts

(invest the money for growth in ways that let you sleep at night), and—critically—how much of your savings you can afford to spend every year without running out. There are easy ways to figure all this out. Who knew? Quinn also shows you how to evaluate your real risks. If you stick with super-safe investment choices, your money might not last and your lifestyle might erode. The same might be true if you rely on traditional income investments. Quinn rethinks the meaning of

<p>“income investing,” by combining reliable cash flow during the early years of your retirement with low-risk growth investments, to provide</p>	<p>extra money for your later years. Odds are, you’ll live longer than you might imagine, meaning that your savings will stretch for many more years than</p>	<p>you might have planned for. With the help of this book, you can turn those retirement funds into a “homemade” paycheck that will last for life.</p>
