This demonstrates that a system based solely on biosafety levels and security regulations may not be sufficient. Setting the stage for a substantively different approach for managing the risks of working with biological agents in laboratories, *Laboratory Biorisk Management: Biosafety and Biosecurity* introduces the concept of biorisk management—a new paradigm that

encompasses both laboratory biosafety and biosecurity. The book also provides laboratory managers and directors with the information and technical tools needed for its implementation. The basis for this new paradigm is a three-pronged, multi-disciplinary model of assessment, mitigation, and performance (the AMP model). The application of the methodologies, criteria, and guidance outlined in the book helps to reduce the risk of laboratories becoming the sources of infectious disease outbreaks. This is a valuable resource for those seeking to embrace and implement biorisk management systems in their facilities and operations, including the biological research, clinical diagnostic, and production/manufacturing communities.

Japan's traditional and fragile satoyama landscape system was developed over centuries of human life on mountainous island terrain in a monsoon climate. The carefully managed coppice woodlands on the hillsides, the villages strung along the base of the hills, and the carefully tended paddy fields of rural Japan made possible the sustainable interaction of nature and humans. Radical changes in the middle of the twentieth century led to the abandonment of satoyama landscapes which now are being rediscovered. There is a new realization that these woodlands still play a vital role in the management

of the Japanese landscape and a new determination to manage them for the future. This multifaceted book explores the history, nature, biodiversity, current conservation measures, and future uses of satoyama. The information presented here will be of interest in all parts of the world where patterns of sustainable development are being sought.

In this thoroughly innovative work, Hans Ulrich Gumbrecht evokes the year 1926 through explorations of such things as bars, boxing, movie palaces, hunger artists, airplanes, hair gel, bullfighting, film stardom and dance crazes. From the vantage points of Berlin, Buenos Aires, and New York, the reader is allowed multiple itineraries, ultimately becoming immersed in the activities, entertainments, and thought patterns of the citizens of 1926.

A clarion call to rethink natural resource

extraction beyond the extractive industries

Planetary Mine rethinks the politics and territoriality of resource extraction, especially as the mining industry becomes reorganized in the form of logistical networks, and East Asian economies emerge as the new pivot of the capitalist world-system. Through an exploration of the ways in which mines in the Atacama Desert of Chile—the driest in the world—have become intermingled with an expanding constellation of megacities, ports, banks, and factories across East Asia, the book rethinks uneven geographical development in the era of supply chain capitalism. Arguing that extraction entails much more than the mere spatiality of mine shafts and pits, Planetary Mine points towards the expanding webs of infrastructure, of labor, of finance, and of struggle, that drive resource-based industries in the twenty-first century.

The Global Monitoring Report 2014/2015 will, for the first time, monitor and

report on the World Bank Group's twin goals of ending extreme poverty by 2030 and boosting shared prosperity, while continuing to track progress toward the Millennium Development Goals (MDGs). This Global Monitoring Report examines how a select set of policies in the areas of human capital and the environment can create jobs and make development more inclusive and sustainable, while highlighting how social assistance policies can help end poverty and improve growth prospects. It discusses most of these issues across a full spectrum of countries. This means the Report not only addresses low- and middle-income countries but also, for the first time, includes a discussion of high-income countries as well. The Report will contain quantitative information about the World Bank Group's twin goals: It will provide an assessment on how far the world has to go to end extreme poverty by 2030 and how much of prosperity has been shared with the bottom 40 percent of a country's population. The report is prepared in collaboration with the International Monetary

Fund (IMF) and the Organization for Economic Co-operation and Development (OECD).

Design philosophies can be useful, but inspiration, creative strategies, and efficient work habits are what really get the job done. Designer, instructor, and author Curt Cloninger provides a multitude of strategies, tools, and practices that readers can use to inject a big dose of creativity into just about any design project. With illustrations drawn from 20th-century French philosophy, medieval manuscripts, punkrock posters, and more, Curt's innovative text introduces readers to his personal toolkit for hot-wiring the creative process. You'll learn strategies to:

- Recognize and believe in your creative powers
- Develop effective methods for evaluating your own work
- Draw inspiration from the past
- Use standard software in experimental ways, and find nonstandard applications to create new effects
- Maintain a personal design playground
- Mine your subconscious with the Oblique Strategies Cards, developed by Brian Eno and Peter Schmidt
- Un-stick your imagination

by "blitz-designing" mock-ups Curt Cloninger is an artist, designer, author, and instructor in Multimedia Arts & Sciences at the University of North Carolina at Asheville. His book *Fresh Styles for Web Designers: Eye Candy from the Underground* (New Riders, 2002) is an industry standard on creative Web design solutions. Curt's art and design work has been featured in *I.D. Magazine*, *HOW Magazine*, *The New York Times*, *Desktop Magazine*, and at digital arts festivals from Korea to Brazil. He regularly speaks at international events such as *HOW Design*, *South by Southwest*, *Web Design World*, and *FILE*. His pirate signal broadcasts from lab404.com to facilitate lively dialog.

Temptation has never come in a hotter package. You know how people say you can never believe what you read on the interwebs? That a hot guy online is probably a creeper with a beer gut and a shoe fetish, not the sexy beast he pretends to be? So I had no clue that the anonymous blogger who contacted my law firm about his naughty

website would be droolworthy in real life. Not that I'm interested in him in that way. Attorneys can't go around sleeping with their clients. Not even if he is the most beautiful man I've ever met and so ridiculously smart he makes my nerdy-girl heart sigh. Besides, he has too much on the line to risk taking a chance on the insane chemistry building between us. We both do. I've always followed the rules. Too bad he makes me want to break each and every one of them. *Green Building* Springer Science & Business Media 'CUDA Programming' offers a detailed guide to CUDA with a grounding in parallel fundamentals. This book argues that renewable electrification in developing countries provides important opportunities for local economic development,

but new pathways are required for turning these opportunities into successful reality. Building Innovation Capabilities for Sustainable Industrialisation offers a novel input into the debate on development of capabilities for sustainable industrialisation and delivers key insights for both researchers and policy makers when it comes to the question of how to increase the economic co-benefits of renewables expansion. The chapters in the book use a tailored analytical framework in their studies of renewable electrification efforts in Kenya and other countries in sub-Saharan Africa. They draw on a mix of project, sector and country level case studies to address questions such as: What capabilities are developed through on-going renewable electrification projects in developing economies? How can the expansion of renewable electrification be supported in a way that also encourages sustainable economic development? What role do international linkages (South-South and North-South) play and what role should they play in the greening of energy

systems in developing economies? The authors provide a new understanding of how green transformation and sustainable industrialisation can be combined, highlighting the opportunities and constraints for local capability building and the scope for local policy action. This book will be of great interest to students and scholars of development studies, energy studies, sustainability and sustainable development, as well as practitioners and policy makers working in development organisations and national governments.

With English becoming the world's foremost lingua franca, the pressure to improve English language education (ELE) has been steadily increasing.

Consequently, the nature of ELE has changed drastically in the last decade. This has not only brought about a number of changes in the way English is taught and learnt, but it has also led to various innovative practices around the world. As a result, this edited book aims to shed light on the new theoretical and methodological developments in the field of ELE as well as the major issues and difficulties faced by practitioners in different

parts of the globe. One very important variable that the book takes into account is the role that English already plays in a particular society since this may affect the views that teachers and students hold of the language. This in turn can significantly influence the way English is taught and learnt in given political, economic and socio-cultural settings. The purpose of this book is therefore to provide a comprehensive overview of the pedagogical methods, policies and problems that underlie English language education in ten different regions across the world, including: the USA, Canada, the UK, Australia, New Zealand, India, Singapore, Japan, China and Hong Kong. In doing so, the different chapters in the book emphasize the importance of responding to linguistic and other forms of diversity in order

to develop English language education in a globalized world. This book will be useful for teachers and students of English language, for English language curriculum and materials developers, and for those involved in educational policy-making and language acquisition research. Written by experts in the field, the range of content covered in the book's chapters will also help policy-makers, researchers and practitioners develop effective English language education practices and policies, and propose solutions to emerging issues in English language teaching and learning in different environments around the world. The newly-developed arguments and concerns pertaining to English language education will serve as future reference for professionals interested in this area of expertise.
