The Manual of Tests and Criteria contains criteria, test methods and procedures to be used for classification of dangerous goods according to the provisions of Parts 2 and 3 of the United Nations Recommendations on the Transport of Dangerous Goods, Model Regulations, as well as of chemicals presenting physical hazards according to the Globally Harmonized System of Classification and Labelling of Chemicals (GHS). As a consequence, it supplements also national or international regulations which are derived from the United Nations Recommendations on the Transport of

Dangerous Goods or the GHS. At its ninth session (7 December 2018), the Committee adopted a set of amendments to the sixth revised edition of the Manual as amended by Amendment 1. This seventh revised edition takes account of these amendments. In addition, noting that the work to facilitate the use of the Manual in the context of the GHS had been completed, the Committee considered that the reference to the "Recommendations on the Transport of Dangerous Goods" in the title of the Manual was no longer appropriate, and decided that from now on, the Manual should be entitled "Manual of Tests and Criteria".

NIST SP 800-111 November 2007 In today's computing environment, there are many threats to the confidentiality of information stored on end user devices, such as personal computers, consumer devices (e.g., personal digital assistant, smart phone), and removable storage media (e.g., universal serial bus [USB] flash drive, memory card, external hard drive, writeable CD or DVD). Some threats are unintentional, such as human error, while others are intentional. Intentional threats are posed by people with many different motivations, including causing mischief and disruption and committing identity theft and other fraud. A common threat against end user devices is device loss or theft. Someone with physical access to a device has many options for attempting to view or copy the information stored on the device. Why buy a book you can download for free? First you gotta find it and make sure it's the latest version, not always easy. Then you gotta print it using a network printer you share with 100 other people - and its outta paper - and the toner is low (take out the toner cartridge, shake it, then put it back). If it's just 10 pages, no problem, but if it's a 250-page book, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. An engineer that's paid \$75 an hour has to do this himself (who has assistant's anymore?). If you are paid more than \$10 an hour and use an ink jet printer, buying this book will save you money. The Government's draft Consumer Rights Bill has the potential to consolidate, simplify and modernise consumer law however issues and inconsistencies must be resolved. The current proposals would apply a statutory right that services under a contract must be provided with reasonable care and skill [a fault-based standard]. This does not provide sufficient consumer protection. The Draft Bill should require that services must achieve the stated result, or one which could be reasonably expected [an outcomes-based standard]. As the Bank of Ireland case demonstrated, the right to terminate a contract does not necessarily protect consumers from detriment. This report recommends an addition to the grey list - the indicative list of contract terms which may be regarded as unfair. The Government's proposals for enhanced consumer measures, which would require traders that have breached consumer law to compensate consumers, are welcome. However, private enforcers should also be able to use them. The collective proceedings regime has the potential to improve access to redress for victims of competition law breaches but the Government must clarify the certification requirements for such proceedings. The creation of rights and remedies for digital content is welcome, but the Government must do more to communicate how the proposals will work in practice. Under the draft Bill, the remedies available to consumers of digital content would depend on whether the content is intangible (such as a music download) or tangible (such as a CD). In appropriate circumstances, consumers should have the right to reject and obtain a refund irrespective of whether they purchase intangible or tangible digital content
