 For the Saudi Arabia 2020 publication, our sixth annual edition on the Kingdom's economy, we placed heavy emphasis on technology and innovation as a catalyst for change, as well as the developments in the digital economy. Across numerous

industries, technology is playing an increasingly greater role—as a global trend but no less true for Saudi Arabia, which has in recent years committed large-scale investment into digital transformation. The Business Year's country-specific publications, sometimes featuring over 150 face-to-face interviews, are among the most comprehensive annual economic publications available internationally. This 280-page publication covers finance, green economy, energy, water, industry, defense, transport, aviation, digital economy, real estate, construction, food, agriculture, health, education, entertainment, culture, and sports.

 CORROSION POLICY DECISION MAKING Explore the science, management, economy, ecology, and engineering of corrosion management and prevention In Corrosion Policy Decision Making, distinguished consultant and corrosion expert Dr. Reza Javaherdashti delivers an insightful overview of the fundamental

principles of corrosion with a strong focus on the applicability of corrosion theory to industrial practice. The authors demonstrate various aspects of smart corrosion management and persuasively make the case that there is a real difference between corrosion management and corrosion knowledge management. The book contains seven chapters that each focuses on one important aspect of corrosion and corrosion management. Corrosion management is an issue that is not just corrosion science or corrosion engineering but rather a combination of both elements. To cover this paradoxical aspect of corrosion management, chapter 2 deals with some basic, introductory concepts and principles of corrosion and coating/painting (an important corrosion protection method) while chapter 3 explains the elements of smart corrosion management in detail. Another important principle of smart corrosion management is to be able to study the cost of corrosion, chapter 4 introduces important points in the economics involved in a smart corrosion management. As indicated earlier, corrosion engineering is also an integral part of corrosion management and thus chapter 5 looks at the engineering side of corrosion by detailing the example of Process Additives (EMPA). Chapter 6 for the first time looks at the possibility of using TRIZ (algorithm of invention) in corrosion management. Finally, chapter 7 presents the necessary elements for building a model that would explore the mutual interaction between corrosion and environment mainly by exploring the difference between environmental impact and environmental effect. Chapter 7 is also very important because the four models so far applied to estimate the cost of corrosion (Uhlig Method, Hoar Method, I/O method and LCC method) are not capable of suggesting any clear model or a sensible way of exploring the elements necessary to explain the impact of indirect costs of corrosion the most important of which being environmental damages imposed by corrosion. This book is ideal for engineers, students, and managers working or studying corrosion, Corrosion Policy Decision Making is also an indispensable resource for professionals in the fields of upstream and downstream, on-shore/off-shore oil and gas, transportation, mining, power generation as well as major sectors of other strategic industries.

Inspired from the legacy of the previous four 3DFEM conferences held in Delft and Athens as well as the successful 2018 AM3P conference held in Doha, the 2020 AM3P conference continues the pavement mechanics theme including pavement models, experimental methods to estimate model parameters, and their implementation in predicting pavement performance. The AM3P conference is organized by the Standing International Advisory Committee (SIAC), at the time of this publication chaired by Professors Tom Scarpas, Eyad Masad, and Amit Bhasin. *Advances in Materials and Pavement Performance Prediction II* includes over 111 papers presented at the 2020 AM3P Conference. The technical topics covered include: - rigid pavements - pavement geotechnics - statistical and data tools in pavement engineering - pavement structures - asphalt mixtures - asphalt binders The book will be invaluable to academics and engineers involved or interested in pavement engineering, pavement models, experimental methods to estimate model parameters, and their implementation in predicting pavement performance.

This book discusses the strategic shift in ownership of Aramco, the Saudi Arabian Oil Company, and its potential impact on Aramco's role in a post- privatized world. Scheduled to become an IPO in 2018, Aramco is on the verge of becoming the largest IPO on the market. As the world's largest oil and gas company, Aramco's impending privatization has important implications for the world's petroleum market. This book, therefore, undertakes an analysis of Aramco, examining its history, its current role in Saudi Arabia's economy, and its future role as an IPO. The chapters highlight the likely outcomes for Aramco in proceeding with its planned IPO and privatization, as well as the various policy options and models available to it by drawing on the privatization of other national oil companies in Norway , Russia, Brazil, and China. The book also explores the complexities that will be involved in transforming Saudi Aramco to a privatized company—albeit with significant government oversight and control—and addresses key questions on the issues likely to be faced, such as IPO pricing, the listing, domain, and market capacity, and potential stakeholders. As such, this book will be of interest to academic researchers studying energy economics, energy policy, and the political economy of the Middle East, as well as private sector decision makers in energy related fields, international organizations, international oil companies, energy commodity traders, and public sector energy policy makers with interest in Saudi Arabia and Aramco's IPO.
