### Kaplan's Cardiac Anesthesia E-Book Wintergreen Orchard House

This self-examination review is designed to prepare students for exams such as the US National Certificate Examinations. Over 200 multiple choice and objective questions are accompanied by detailed explanations. The new edition features a practice exam and additional case study questions.

### Clinical Laboratory Science Review Cengage Learning

This innovative book comprehensively sheds light on the theory and practice of technological policies by employing modern analytical tools and economic techniques. The New Economics of Technology Policy focuses on all public interventions intended to influence the intensity, composition and direction of technological innovations within a given entity such as a region, country or group of countries. Dominique Foray has gathered together many of the leading scholars in the field to comprehensively explore numerous avenues and pathways of research. Bringing together a collection of policy-oriented papers, this book will strongly appeal to policy-makers, academic researchers and graduate students with an interest in economics, public policy, science, technology and society.

In the 1950s, ninety-five percent of patients with Hodgkin's disease, a cancer of lymph tissue which afflicts young adults, died. Today most are cured, due mainly to the efforts of Dr. Henry Kaplan. Henry Kaplan and the Story of Hodgkin's Disease explores the life of this multifaceted, internationally known radiation oncologist, called a "saint" by some, a "malignant son of a bitch" by others. Kaplan's passion to cure cancer dominated his life and helped him weather the controversy that marked each of his innovations, but it extracted a high price, leaving casualties along the way. Most never knew of his family struggles, his ill-fated love affair with Stanford University, or the humanitarian efforts that imperiled him. Today, Kaplan ranks as one of the foremost physician-scientists in the history of cancer medicine. In this book Charlotte Jacobs gives us the first account of a remarkable man who changed the face of cancer therapy and the history of a once fatal, now curable, cancer. She presents a dual drama—the biography of this renowned man who called cancer his "Moby Dick" and the history of Hodgkin's disease, the malignancy he set out to annihilate. The book recounts the history of Hodgkin's disease, first described in 1832: the key figures, the serendipitous discoveries of radiation and chemotherapy, the improving cure rates, the unanticipated toxicities. The lives of individual patients, bold enough to undergo experimental therapies, lend poignancy to the successes and failures. Visit the author's website.

Appraising cancer as a major medical market in the 2010s, Wall Street investors placed their bets on single-technology treatment facilities costing \$100-\$300 million each. Critics inside medicine called the widely-publicized proton-center boom "crazy medicine and unsustainable public policy." There was no valid evidence, they claimed, that proton beams were more effective than less costly alternatives. But developers expected insurance to cover their centers' staggeringly high costs and debts. Was speculation like this new to health care? Cancer, Radiation Therapy, and the Market shows how the radiation therapy specialty in the United States (later called radiation oncology) coevolved with its device industry throughout the twentieth-century. Academic engineers and physicians acquired financing to develop increasingly powerful radiation devices, initiated companies to manufacture the devices competitively, and designed hospital and freestanding procedure units to utilize them. In the process, they incorporated market strategies into medical

organization and practice. Although palliative benefits and striking tumor reductions fueled hopes of curing cancer, scientific research all too often found serious patient harm and disappointing beneficial impact on cancer survival. This thoroughly documented and provocative inquiry concludes that public health policy needs to re-evaluate market-driven high-tech medicine and build evidence-based health care systems.
