A whole new generation will be climbing aboard this sunny, psychedelic storybook, while nostalgic Beatles fans of all ages will be clamoring for a ticket to ride. Once upon a time (or maybe twice), some 80,000 leagues beneath the sea, there lay a colorful land of song and laughter called Pepperland, where Sergeant Pepper's Band was always playing your song -- until the Blue Meanies burst on the scene and chased all the music and magic away. So began the classic 1968 film *Yellow Submarine*, inspired by a song and hailed as an avant-garde amalgam of pop art, Beatles music, and highly innovative animation. Now that film's dazzling images -- and its lighthearted, witty tale -- is showcased in a glorious picture book sure to be savored by fans and readers of all ages.

An Ice Age saga unfolds as Phil and Tim are sent back in time into the boundless prehistoric wilderness of the Northwest. Catastrophic floods, thundering herds of bison and mammoths cross their path as they trek across forests, rivers and plains. They become separated and direwolves, bears and sabertooth tigers are on their trail. But they are among Native Americans who treat them as the sons of Thunder. New people arrive to change the course of events. Who can say what will happen tomorrow? The world is on the back of a giant salmon. When the fish jumps, the earth shakes and the mountains fall down. Thunderbird soaring high above is their guide by day and shining in the heavens as a beacon at night. There is another polestar, Deneb, in the night sky at the head of Thunderbird.

The 20th century gave us two great theories of physics: the general theory of relativity, which describes the behaviour of things on a very large scale, including the entire Universe; and quantum theory, which describes the behaviour of things on a very small scale, the sub-atomic world. The refusal of the Universe to reveal an equation that combines these two great ideas has caused some people to doubt our whole understanding of physics. In this landmark new book, popular science master John Gribbin tells the dramatic story of the quest that has led us to discover the true age of the Universe (13.8 billion years) and the stars (just a little bit younger). This discovery, Gribbin argues, is one of humankind's greatest achievements and shows us that physics is on the right track to finding the 'Theory of Everything'. 13.8 provides an eye-opening look at this cutting-edge area of modern cosmology and physics, and tells the compelling story of what modern science has achieved - and what it can still achieve.
